1. Open skin\frontend\default\default\css\styles.css file (or appropriate file from your skin, if you use a custom skin) and add this code at the end of the file:

```
/* Block: Review */
.block-review .block-title strong {background-image:url(../images/i_ma-reviews.gif);  background-position:0 0;
background-repeat:no-repeat; padding-left:21px;}
.block-review .block-content {padding:10px}
```

2. If you use a 3-column template, two blocks with reviews will be displayed on your website. To remove one of them please open the extension layout file app\design\frontend\default\default\layout\amreview.xml and comment out (or delete) this code, if you would like to display the block only in the left column:

```
<reference name="right">
        <block type="amreview/sidebar" name="amreview_sidebar"
                                                template="amreview/sidebar.phtml"/>
    </reference>
```

Or this, if you would like to display the block only in the right column:

```
<reference name="left">
    <block type="amreview/sidebar" name="amreview_sidebar"
      template="amreview/sidebar.phtml" />
</reference>
```

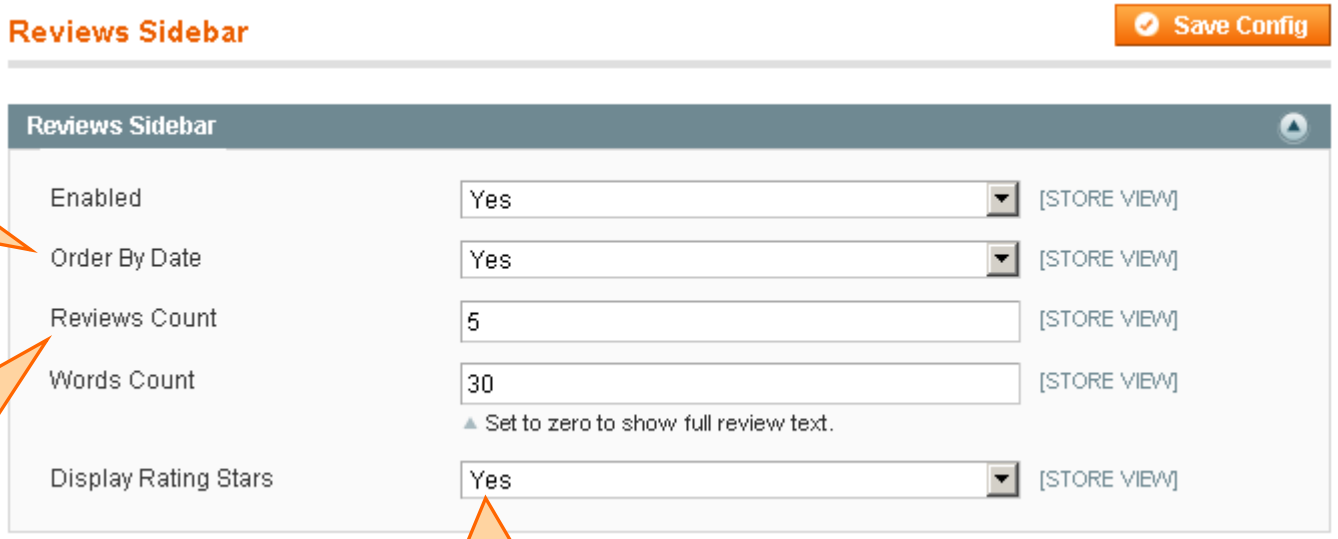
2. Reviews block settings

To set up the extension please go to admin panel -> System -> Configuration -> Amasty Extensions -> Reviews Sidebar



If you turn 'Order by date' setting to 'Yes', the newest reviews will be displayed. If to 'No', reviews will be shown in random order.

You can choose how many reviews at a time should be displayed in the block. Also you can indicate how many words from each review should be displayed (set to zero for full review text).

To display rating stars in the reviews block, set this option to 'Yes'.
