SugarCRM Bridge

Those Magento owners who have both online and offline stores often experience the problem of efficient data management. The thing is that because of complicated business processes some information about product stock or price changes is not updated on time. In order to make your business more efficient we suggest you taking use of SugarCRM, a well-known customer relationship management solution. And our new Magento extension will help one to integrate this system with the Magento platform at a highly professional level. With the help of [Sugar CRM Bridge](#) you will be able to map the required fields, configure synchronization settings and get a full access to all the latest data from your online and offline stores with almost no effort!
