## How can I increase customers' loyalty with this extension?

Magento Photo Gallery Pro offers a unique feature of **customer generated content**.

It means that authorized users can upload their own pics of the product. It works great for increasing customer loyalty, as in most of the cases people need not only professional photos of the item, but also real life pictures that are made by other customers.

What is more, the extension gives an option to **rate product pictures** for your visitors. Now your customers are able to leave feedback which is priceless for improving your product presentation quality.

## Can I adjust the look of the photos and

## **galleries to my Magento store?**

Yes, sure. You can easily **customize your extension** using separate HTML/CSS files.

## **Won't the extension make the page too heavy and slow?**

Don't worry, we use **thumbnail optimization** so your website will still load fast.

## **Is Magento Photo Gallery Pro good for SEO?**

Sure! You can specify all the **metadata and URLs** for images and albums, as well as full and short descriptions for galleries.

## **Is Magento Photo Gallery Pro compatible with other Amasty image extensions, e.g. Color Swatches Pro?**

It is. **All Amasty extensions are compatible with each other**, so you can install any of them in various combinations.

## **Does it support mass pics upload?**

Yes, it does. We value your time, so we included **two mass uploading features**. You can upload a ZIP archive with pictures from your computer or take the images from the particular directory on your server.
