

Magento 2 Product Labels – new Amasty extension

[Ksenia Dobreva](#) Jan 28, 2016

Meet the new Magento 2 extension from Amasty – [Product Labels](#).

Mark ‘On Sale’, ‘New’ and other products with eye-catching labels to immediately draw customers’ attention to particular items. Use predefined variables for label texts and easily upload your own label images.

NEW MAGENTO 2 EXTENSIONS

PRODUCT LABELS

Useful for: **PROMOTION**

Features:

- Add colorful labels to any products
- Use flexible conditions for badges display
- Set time periods for labels demonstration
- Use variables to customize label messages
- Set priorities for label display

With the use of the Product Labels, you will bring attention to the products you need to sell faster, inform shoppers about product qualities or special offers, display additional information on the product page. The extension provides you with an impressive list of settings to make sure your labels look appealing with minimal resources spent on setup.

MAGENTO 2 PRODUCT LABELS MAIN FEATURES:

- **Add labels to products with discounts and special offers:** new arrivals, products that will be discounted, products with best price-quality ratio, best prices, top sellers, top rated products, products with special qualities, etc.;
- **Customize the labels looks:** upload your own labels, use the default ones which come with the extension, use the labels builder, or just display text as a label without images. Specify the position of the labels and preview them in the backend before publishing.
- **Show product labels exactly when and where you want:** use conditions and show labels on particular products, taking into account

new items, sale products, price range, more than 20 product attributes, such as SKU, attribute set, category, customer group, and such.

ADVANCED OPTIONS

Use mass actions: easily enable, disable or delete product labels in bulk;

Use variables for labels text: use variables to display customized and relevant information on the labels;

Use several labels on a single product: you can show the label with the highest priority or show several labels if you need to;

Display badges of simple products on the pages of their parent items;

Use rounding algorithms: the module automatically calculates and shows percent discounts or flat amounts based on the difference between special and regular price;

Use labels priorities: set priorities to manage label display and to choose the most important labels if the product falls under several rules.
