

# Two-Factor Authentication for Magento 2 – New Amasty Extension

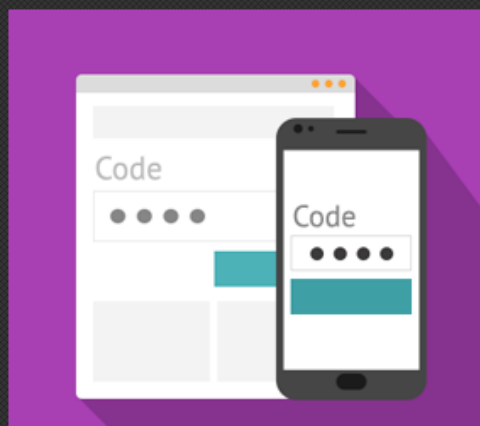

[Alina Bragina](#) Jul 14, 2017

We are happy to introduce you our new Magento 2 extension – [Two-Factor Authentication](#).

**Make your e-business data protection advanced, boost it with the Two-Factor Authentication extension. Having implemented the module, your webstore will be secured from computer fraudulence, data sniffing, keylogging and other Internet threats. Feel certain only your staff members are provided with access to Magento account.**

# NEW MAGENTO 2 EXTENSIONS

## TWO-FACTOR AUTHENTICATION

Useful for: **SECURITY**

Features:

- Secure two-step authentication
- Guaranteed protection against spyware
- Possibility to include particular IP's in the white list
- Authentication settings for each user role

*The Internet environment is being continuously filled up with malicious viruses and hackers. Whether it's a computer fraudster trying to intercept money having hooked your credentials through a brute force attack, or data sniffing accomplished via an insecure public Wi-Fi hotspot connection, you need to keep your store theft-proof online. The module helps to secure a business from unauthorized access by applying double authentication.*

## MAGENTO 2 TWO-FACTOR AUTHENTICATION FEATURES:

- **Double your Admin panel security** through a common logging in enforced with mobile device authentication
- Supply your business with up-to-date **anti-fraud protection**
- Create an **additional security code with the help of Google authenticator** for accessing Magento account
- Include your **company IPs into the white list** in the backend settings to remove the two-step authentication
- Configure each admin role individually by assigning a **unique**

## security code to each staff member

- Your **iPhone (iOS 3.1+), iPad, iPod touch, Android (1.5+), Blackberry (OS 4.5-6.0)** are compatible with the security code generation app

**USER INFORMATION**

- User Info
- User Role
- Two-Factor Settings**
