

New Extensions: Magento 2 Stripe Payment

[Elizaveta Barkalina](#) Jan 25, 2019

We are happy to present you our new Magento 2 extension – [Stripe Payment](#).

Use one integration to offer multiple payment options worldwide. Save on payment processing. Shield customers' payment info. Speed up purchases and refunds. Create a positive shopping experience to boost conversion.

A graphic for the Stripe Payment extension. On the left, a vertical bar with a blue-to-purple gradient contains a circular icon with the Stripe logo, a credit card, and a padlock. Below the icon, it says 'Useful for:' and 'CHECKOUT' in a white rounded rectangle. On the right, a white rounded rectangle contains the text 'STRIPE PAYMENT' in large bold letters, followed by 'Features:' and a bulleted list of four features.

STRIPE PAYMENT

Features:

- Cover all payment needs
- Speed up payments with automatic invoicing
- Manage flexible refund issuing
- Use 3D Secure

Implementing a custom integration endpoint for every Magento 2 payment method requires sufficient tech expertise and substantial investments. However, the unmet customer's payment needs result in a higher rate of cart abandonment: according to Statista, it's already hit 70%. So, how to strike the balance?

With Magento 2 Stripe Payment, you'll need only one integration to activate various online payment methods, both local and international. Enabling Stripe, you'll ensure 3-layered payment security with a one-click buy.

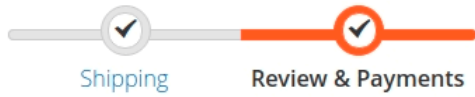

MAGENTO 2 STRIPE PAYMENT FEATURES:

- **Implement a single solution to enable diverse payment options:** Stripe supports payments in 135 currencies via local and international payment options;
- **Stay cost-effective:** reduce costs of online payment processing by 24%;
- **Secure customers' payment data:** Stripe is certified to [PCI Service Provider Level 1](#), which means that vulnerable payment data is transferred encrypted and doesn't stay on your servers;

- **Protect your customers against fraud:** ensure 3D secure card verification;
- **Create a customer-friendly experience:** the module uses auto-fix and instant card validation to correct mistakes in the customers' info input;
- **Set up a one-click buy to increase conversions:** request payment info from the browser or autofill customers' payment data with Payment Request API to speed up purchases;
- **Use instant payment to save time and efforts:** the 'Authorize and Capture' option creates an invoice automatically and debits money immediately;
- **Adapt e-payments to your business needs:** ban payments from specific countries for security, legislative or other reasons and easily track held transactions;
- **Ensure painless refunds:** easily provide a full or partial refund via your Magento 2 backend and protect your store reputation.
