

# New Extensions: Magento 2 Reindex from Admin

[Elizaveta Barkalina](#) Mar 4, 2019

We are happy to present you a new Magento 2 extension – [Reindex from Admin](#).

**Reindex your website all by yourself – you won't need developers' help. Bridge the time gap between data changes and reindexing. Check reindexation live statuses. Reindex data on save to prevent cart abandonment.**

The graphic features a yellow background with a white rounded rectangle. On the left, a blue and purple gradient box contains an icon of a computer monitor with a green circular arrow, and a white button labeled 'USER EXPERIENCE'. To the right, the text 'REINDEX FROM ADMIN' is displayed in bold, followed by a list of features.

**REINDEX FROM ADMIN**

Features:

- Automate and simplify reindexing
- Reindex data in bulk and in a click
- Use a handy grid to run reindexation
- Reindex data with cron job schedule
- Easily check reindexation status

*75% of users land on the 1st page of Google search results and never reach page 2. So, striving to hit the top of the search, retailers opt for content updates and reindexation. However, they tend to forget about the time gap between the two, which may worsen search result relevance and cause cart abandonment. Our new Magento 2 extension can help with that.*

*With Reindex from Admin, you'll be able to reindex pages from the backend automatically. You'll manage to reindex the website in sync with the updates with no damage to store performance and the UX.*

## MAIN MAGENTO 2 REINDEX FROM ADMIN FEATURES

- **Reindex your store without SSH** and command line access
- **Reduce lengthy reindexation** workflow through automation;
- **Check the reindexation statuses live** on an easy-to-use grid;
- **Reindex in a click with 'Reindex all' button** and update indexes in bulk to save time for other tasks;
- **Reindex content changes** right after you save them.
