For more details see the Product Feed extension page.

Guide for Product Feed

Product Feed extension is designed to generate files containing data from the store catalog and then share them. For example, using this extension you can generate a feed file with your products and upload it to Google to make your products available for advertisement campaigns.

How to set up a feed profile for Google Merchant and Facebook

Since Facebook is using the same feed format and tags as Google, the feed profile we're going to create here will work for both Google and Facebook.

Go to Feeds and click the Setup Google Feed button.

	∕lagen	to ⁻ Admin Panel								Logged in as demouser	Friday, June 3, 2	016 <u>Try Magento</u>	<u>Go for Free</u> <u>Log Out</u>

Step 1. Categories mapping

To map your category to category in Google taxonomy simply click on category name and insert suitable category path from **Google taxonomy**:

<u>a</u>masty

3/30

When you're done mapping categories this is how the result might look like:

Dept Cotolog

Furniture	
Furr	niture > Sofas
Furr	niture > Beds & Accessories
Electronic	CS
; > C	communications > Telephony > Mobile Phones
Can	neras & Optics
	Cameras & Optics > Camera & Optic Accesso
	Cameras & Optics > Cameras
Elec	ctronics > Computers
L	Electronics > Computers > Desktop Compute
	Electronics > Computers > Laptops
	Iter Components > Storage Devices > Hard D
	Electronics > Video > Computer Monitors
	ronics > Electronics Accessories > Memory >
	Components > Desktop Computer & Server C
	> Computer Components > Computer Proces
	Electronics Accessories > Computer Compor
Apparel &	Accessories > Clothing
App	arel & Accessories > Clothing > Shirts & Tops
Арр	arel & Accessories > Shoes
	Apparel & Accessories > Shoes
	Apparel & Accessories > Shoes
App	arel & Accessories > Clothing > Shirts & Tops

Hit **Save** button to continue.

Step 2. Basic product information setup

Wizard will have all fields already filled for you so you can skip to the next step if you don't want to make any changes.

But in case you want, for example, to use **short description** instead of the **description** in your feed, then you can do it like this:

Step 1: Categories	Setup Google Feed								
Step 2: Basic Product Information									
Step 3: Optional Product	Step 2: Basic Product Informatio	Step 2: Basic Product Information							
Information	Please select attributes to output	it in feed							
Step 4. Run and Opload	id		Attribute 👻	SKU	•				
	An identifier of the item								
	title		Attribute -	Name	•				
	Title of the item								
	description		Attribute 👻	Short Description	-				
	Description of the item			Screensize					
	link		Attribute 👻	Shipment Shirt Size					
	URL directly linking to your item's pa	age on your website							
	image link		Attribute 👻	Shoe Size					
	URL of an image of the item			Short Description					
	condition		Text 💌	SKU					
	Condition or state of the item (allow	ved values: new, refubrished, used)		Small Image					
	price		Attribute 👻	Special Price From Date					
	Price of the item			Special Price					
	tax		Attribute -	Special Price To Date	=				
	The tax rate as a percent of the ite	m price, i.e., a number as a percentage		Tax Class					
			Thumbnail						
	0.5%-5-5		Thumbnail Label						
	Options		_	URL Key					
	Store View *	English	-	Visibility	-				
	Price Currency	USD		v					

The same can be applied to all other attributes.

Also check the **Options** section. There you can select which storeview to take attribute values from. It's very useful when you have a multilingual store for example, so you can create feeds using the names or descriptions in specific languages. Same works for currencies. If you have a multistore configuration with different currencies set for each store then this setting will make the Feed fetch product prices in the currency assigned to the specific store.

Notice! Condition tag

By default, Wizard will have a static text **New** put in the **condition** tag. This is alright if you don't sell used or refurbished items. But in case you do, you should create a product attribute which will indicate if the product is new or not, and assign values to this attribute for each product in your store.

As you may have already noticed, the static text **New** is shown for the **condition** tag. This is okay when you sell only new items. And if you sell used or refurbished items, don't forget to change this setting.

This is how this attribute configuration may look like:

Attribute Information

Properties	
Manage Label / Options	

-

New Product Attribute

Attribute Properties	
Attribute Code *	condition
	 For internal use. Must be unique with no spaces. Maximum length of attribute code must be less then 30 symbols
Scope	Store View
Catalog Input Type for Store Owner	Dropdown
Unique Value	No A Not shared with other products
Values Required	No
Input Validation for Store Owner	None
Analy Ta +	All Product Types

Attribute Information	🌈 New Produ	ct Attribute					
Properties 🗎							
Manage Label / Options	💡 If you do not	specify an option	n value for a specif	ic store view then t	he default (Admin) va	lue will be used.	
	Manage Titles (S	Size, Color, etc.)					
	Admin	English	French	German			
	Condition						
	Manage Options	(values of your a	attribute)				
	Admin	English	French	German	Position	Is Default	Add Option
	new					۲	Delete
	used					O	🛞 Delete
	refubrished					0	Delete

While creating the option for this attribute please note that Google will accept only the following values: **new**, **refurbished** or **used**.

After the attribute is created (you can assign attribute values to products later) reload Wizard page to be able to select this newly created attribute in the dropdown:

Step 1: Categories	Setup Google Feed				
Step 2: Basic Product 🔠					
Information	Step 2: Basic Product Informa	ation			
Step 3: Optional Product Information	Please select attributes to our	tput in feed			
Step 4: Run and Upload	id An identifier of the item		Attribute 👻	SKU	•

	condition Condition or state of the item (al	lowed values: new, refubrished, used)	Attribute 💌	Condition	
	price Price of the item		Attribute 👻	Price	•
	tax The tax rate as a percent of the	item price, i.e., a number as a percentage	Attribute	Tax Percents	
	Options				
	Store View *	English		•	
	Price Currency	USD		-	

Save and go on to the next step!

Step 3. Fine-tuning

Just as in previous step here we see a list of attributes. But this time which attributes to use greatly depends on what you are selling. Google has different requirements for data that should be included in the feed. The requirements depend on your store location and the type of products you export.

For example, if you sell apparel and the **Condition** tag is set to **New** in your products, you will need to have attributes **gtin**, **mpn** and **brand** in the feed.

Brand should be set manually. Here's the example: in my test store I have the brand info saved in the **Manufacturer** attribute, so I choose it in the dropdown.

ctop outogonoo	Setup Obligie i			
Step 2: Basic Product Informati	n			
Step 3: Optional Product	Step 3: Optional Prod	uct Information		
mormauon	Please select attribu	tes to output in feed		
Step 4: Run and Upload	product type	Attribute -	Category	
	sale price Advertised sale price	of the item	Special Price	
	sale price effective Date range during wh	date Attribute	Sale Price Effective Date	
	brand Brand of the item	Attribute	Manufacturer	
	color Color of the item	Attribute	Color	•
	size Size of the item	Attribute -	Size	•
	gender Gender of the item	Attribute	None	
	gtin Global Trade Item Nun	Attribute	None	
	mpn Manufacturer Part Nui Please check bere for	mber (MPN) of the item	None	

Gtin (A Global Trade Item Number) and **mpn** (Manufacturer Part Number) are very important so it's worth looking at them in a bit more detail.

If you don't have these attributes, you have to create them, just the same way as we did for the **condition** attribute before. But this time the attribute type will be **Text field**.

1

	Attribute Properties	
Manage Label / Options		
	Attribute Code *	gtin ▲ For internal use. Must be unique with no spaces. Maximum length of attribute code must be less then 3 symbols
	Scope	Store View .
	Catalog Input Type for Store Owner	Text Field
	Default Value	
	Unique Value	No A Not shared with other products
	Values Required	No
	Input Validation for Store Owner	None
	Apply To *	All Product Types

Properties					
Manage Label / Options	💡 lf you do i	not specify an option	n value for a specif	ic store view then the default (A	dmin) value will be used.
	Manage Titles	s (Size, Color, etc.)			
	Admin GTIN	English	French	German	

After creating these attributes, you have to set them for each product. You may want to check this help article from Google if you don't feel very confident regarding these terms.

If any of the listed attributes are not required for your country or a product type, just choose the **None** option, and the tag won't be added to the feed profile.

Here's how the fully configured step 3 may look like:

city it but going		coup coogie i cou				
Step 2: Basic Product Informatio	n					
Step 3: Optional Product		Step 3: Optional Product Information				
Information		Please select attributes to output in feed				
Step 4: Run and Upload		·				
		product type	Attribute 👻	Category	•	
		Your category of the item				
		sale price	Attribute 👻	Special Price	-	
		Advertised sale price of the item

		Global Trade Item Number (GTIN) of the item				
		mpn	Attribute 👻	MPN	•	
		Manufacturer Part Number (MPN) of the item		1		
		Please check here for details on GTIN and MPN				

Step 4. Automatic generation and uploading options

In the following example we're going to set up a feed to be uploaded to the Google servers daily, once a day, using SFTP in fully-automatic mode.

We should start from the Google Merchant account setup. Add a new feed:

2022/03/24 12:19

11/30

Amasty Support	Diagnostics	Feeds					
	Feeds						
Home	List	(+					
Business information							
Products		Name		Feed ID ⑦	Mode ⑦		
Tax		Name					
		Google.c	om	101599592	Test		
Shipping		Get by lir	nk	102566059	Test		
Shopping ads		Google V	Vizard	102589501	Test		
		UK test		103402125	Test		
		IT_test		103474026	Test		

A **test** feed will do for now, but please keep in mind that test feeds can't be used in AdWords campaigns:

Diagnostics	Feeds
Feeds	
List	Register a new feed
	1 Basic information 2 Input method 3 Feed setup
	Mode ⊘
	 Standard Test
	Туре 💮
	Products 👻
	Make sure your product data meets our policies and Products Feed Specification requirements. You can use Feed Rules after you submit your product data to meet our requirements.
	Target country ⊘
	United States 💌
	Language ⊘
	English
	Currency ⊘
	US Dollar
	Feed name ⑦
	Google_Wizard
	CONTINUE CANCEL

Since we're going to upload our feed files to Google server, **Upload** is what we need here:

13/30

Diagnostics	Feeds
Feeds	
List	Register a new feed
	Basic information 2 Input method 3 Feed setup
	Input method:
	You'll make updates to your product data in a Google Sheet, and they'll automatically be applied to
	 Scheduled fetch You'll host a file on your website that contains data and schedule a regular time for Google to fetch
	Upload You'll keep a file on your computer that contains data and regularly upload it to your account throug more
	CONTINUE CANCEL

The next one is important because the name of the feed file you set here should match the actual name of the file you're going to upload to Google. The same name we're going to use in Wizard a bit later:

Diagnostics	Feeds		
Feeds			
List	Regis	ter a new feed	
	🕑 Ba	sic information	Input method 3 Feed setup
	File na	me ⊘	
	Goog	le_wizard	
	► Adv	anced settings	
	Step 1: Categories	Setup Google Feed	
	Step 2: Basic Product Inform	nation	
	Step 3: Optional Product	Upload feeds to Google serv	ers automatically?
	Step 4: Run and Unload	Filename *	Google_wizard
	Step 4. nun and Opioau	Upload method	No, upload manually You can generate password in Google Merchant Center > Settings > FTP and SFTP

In the Google Merchant dashboard, go to **Settings** (near your profile avatar) > **SFTP / FTP / GCS**:

Click **Reset password** and save the password. Now, on the **SFTP** settings page we can get the server address and login:

15/30

SFTP and FTP

Use SFTP or FTP to transfer files directly to Google's servers. SFTP is the recommended method as it's the more secure way to transfer files. Learn more.

SFTP settings		^
Authenticate your	SFTP account with a generated password.	
Server	SETP server name partnerupload.google.com SFTP server port 19321 SFTP server fingerprint de:ff:00:ad:60:44:be:13:cc:ef:fe:3b:99:c7:a5:4d	
Username	SFTP Username mc-sftp-103099997	
Password	You'll need to generate a password to enable this authentication method RESET PASSWORD	

Return to the Product Feed extension, **step 4**, choose **SFTP** as the upload method and enter the data you have received from the Google Merchant dashboard. Here also goes the filename you've set in the Google Marchant feed settings. Switch the **Generate feed** setting to **Daily**, and you're done!

Here's how the configured step 4 may look like:

tep 1: Categories	Setup Google Feed	
tep 2: Basic Product Information		
step 3: Optional Product	Upload feeds to Google serv	ers automatically?
itep 4: Run and Upload 🛛 🗄	Filename *	Google_wizard
	Upload method	Yes, use SFTP connection
		You can generate password in Google Merchant Center
		Settings > FTP and SFTP
	Host	partnerupload.google.com:19123
		Add port if necessary (example.com:321)
	Login	mc-sftp-123123123
	Password	secretpassword
	Generate feed	Daily

As you click **Save and Continue**, the feed profile will open and the feed generation will start, and because we configured the **SFTP** upload, the feed will go to the Google server, too:

	Progress	<u>Close</u>
_	Feed generating is in progress. 100 of 287 products have been exported.	^
	Feed generating is in progress. 200 of 287 products have been exported.	
sh	The feed has been generated and uploaded to SFTP server.	
eed

specify filena		
у		
M		
M		
И		
N		-
М		
M		
М	Download the file: Google wizard	
м		
111		
M		

After the file is uploaded to the Google server, it will be automatically processed.

Step 5. Getting rid of errors

As I've already mentioned Google has very specific and quite strict requirements for the data in the feed. For example, if we're trying to import apparel items, we must specify some required attributes, such as color, size, age group, and more. You can get details about these requirements **here**.

You can see the list of errors with details in your Google Merchant account after the feed file was uploaded and processed:

272 items processed	
Destinations:	Total File Size:
Shopping: 0 / 272	237.48 KB
Input Method:	Detected file format
Manual Upload	XML

Item Errors

1,038 errors.

- Invalid URL in attribute: image link 269 errors.
- Missing required attribute: link 269 errors.
- Missing required attribute: age group 156 errors.
- Missing required attribute: gender 156 errors.
- Missing required attribute: size 148 errors.
- Missing required attribute: color 34 errors.
- Invalid price in attribute: price 3 errors.
- Invalid price in attribute: price 3 errors.

You can add attributes to your feed profile using the feed editor. For instance, if you need a Color attribute and you have it as an attribute in your Magento store, add it as well.

	<g:price>0 US <g:identifier_< th=""><th>D</th></g:identifier_<></g:price>	D	dentifie	r_exists>

mpd013	821	Show Item	

- Missing required attribute: gender 156 errors.
- Missing required attribute: size 148 errors.
- Missing required attribute: color 34 errors.
- Invalid price in attribute: price 3 errors.
- Invalid price in attribute: price 3 errors.

General settings

Extension menus are located in Catalog > Product Feeds

🍿 Mage	ento ⁻ Admin Panel
Catalog	
Products Fe	eds Feeds Custom Fields Categories Settings

- **Feeds** menu contains product feed profiles. This is where most of the extension action takes place.
- In **Custom Fields** menu you can set up fields for special cases. Please check **below** for instructions and some examples.
- In **Categories** you set category mapping. Why this is important and what you should do about this is described **here**.
- **Settings** menu is where extension settings are. **Here** you can find more about extension settings.

Settings menu

General		۵
Max Memory Used (Mb)	2	[GLOBAL]
	 Will be ignored for some servers, depends on the hosting plan. 	
Batch Size	100	[GLOBAL]
	Indicate now many products will be handled during one iteration. Affects the feed generation time and the	
	server memory consumption.	

- Max Memory Used (Mb) limits the amount of memory feed generation will use. This setting is overridden by server configuration in most cases.
- **Batch Size** controls how many products will be processed in a single batch. Feed generation may take some time in cases when there are many attributes are exported or if the product catalog is large.

Setting this option high will speed up feed generation as there will be fewer if not no timeouts

between batches, but if there is a lot of data to export then generation script may exceed timeout delay and stop.

Feed profile settings

General

Info		
Store View *	English	-

Send to		
	Send download link to email(s)	
Delivery Type *	Download	•
Default number of additional images	10	
Compress	None	•

- **Store View** setting controls from which store view products and attributes will be exported. For example, if you have set English and Dutch store views with different product names and descriptions, then you can set up separate feed profiles to fetch data from English in English and from Netherlands store in Dutch.
- Name name of feed profile.
- Type file type. Should be set according to requirements of the site where you want to upload

feeds. For example, Google accepts feeds in XML and text (TSV) formats. XML format is more flexible when CSV (or TSV) is more straightforward to configure.

- Filename name of the resulting feed file. Please note: feed files are stored with different names due to security reasons. Files which are uploaded to the server using the FTP\SFTP method or by **Download** button will have the correct name set.
- Mode generation mode, can be Manual or automatic (hourly, daily, weekly, monthly).
- **Cron Execution Time** if automatic generation mode is set up, then generation will start at the time set in this setting.
- **Send to** put an email address here and each time generation finishes download link will be sent to this address.
- **Delivery Type** can be set to upload feed file to the external server using FTP or SFTP protocol.
- **Default number of additional images** controls the maximum number of image links which can be exported from a single product.
- **Compress** feed files can be compressed to save disk space and download\upload time. In this setting you can select the compressed file format.

Content

XML format

XML Template									
Header	xml version=</td <td colspan="8"><?xml version="1.0"?> <rss version="2.0" xmlns:g="http://base.google.com/ns/1.0"> <channel></channel></rss></td>	xml version="1.0"? <rss version="2.0" xmlns:g="http://base.google.com/ns/1.0"> <channel></channel></rss>							
Item	item	item A XML Tag for item (example for Google - item).							
Attributes	<g:id>{type="i</g:id>	<g:id>{type="image" value="image_4" format="html_escape" length="50" optional="yes" parent="no"}</g:id>

- **User** FTP\SFTP username.
- **Password** FTP\SFTP password.
- Path path to directory on FTP\SFTP server. Please note: this path is set relative to FTP\SFTP user home directory. If home directory is already set to desired feed destination then you don't need to set Path.
- **Passive Mode** can enable Passive mode for FTP connections. More on FTP modes here.

How to's

How to add current date to the feed

Edit Feed `Google I	Feed`						Back Delete
XML Template							
Attributes	<date>{type="1</date>	text" value="today" format	="date" length	="" optional="yes"	parent="no"} <td>;e></td> <td></td>	;e>	
	72222742						
	date	Text 💌	today	Date	Max Leng	Yes 👻	No Vight Action Vo Vight Action Vo Vight Action Vight Action
Footer	<td><88</td> <td></td> <td></td> <td></td> <td></td> <td></td>	<88					
						_	
Formats							
Date Format	y.m.d]				

How to add or replace text in the attributes (How to use Custom Fields)

Open **Catalog** > **Product Feeds** > **Custom Fields** menu and hit **Add New** button. Give a new field a name and a code, then check the Transform tab.

📀 Back Reset 🥥 Save 🥥 Save and Continue Edit

Custom Field

Condition	Output Value	Modification	Action
Name	Apple	Percentage (like +15%), or fixed value (like -20) 🛞 Remove
like 💌	Name		
Phone	Add Attribute Add Tout		
8	Add Attribute Add Text		
AND Add Condition 💌			
R			
Add Condition 💌	Name 🔽	Percentage (like +15%), or fixed value (like -20)
	Add Attribute Add Text		

On the left you'll see **Condition**. Here you can control for which products our custom field should apply. In the center there is **Output Value**. Here you define how the custom field's output will look like, what will be actually put into the feed. Modification can apply arithmetical operations on attributes selected in **Output Value** column. Of course, this will only work on numbers.

After you have you Custom Field set up you should add it to the feed profile you're using

XML Template								
Attributes	kprice>{type="cust	om field" value="pric	e including vat" for	mat="price" length="	optional="	no" parent=	="no"} <th>ce></th>	ce>
					-			
	XML Tag	Туре	Value	Format	Max Length	Optional	Parent	Action
	price	Custom Field 👻	price with VAT	Price 💌		No 💌	No 💌	Update

Example 1. Add tax to prices

Custom Field			Back Reset	Save 🤣 Save and Continue Edit
Advanced Mapping				
Condition	Output Value		Modification	Action
Add Condition 💌	Price	8	+22%	🛞 Remove
	Add Attribute Add Text			
New Condition				

Example 2. Add text "Apple" before product name for iPhones

22/03/24 12:19	27/30		Guide for Product Fe
Custom Field		Back Reset	Save Save and Continue Edit
Advanced Mapping			
Condition	Output Value	Modification	Action
Name like v iPhone AND - Add Condition - v	Apple Name Add Attribute Add Text	Percentage (like +15%), or fixed val	ue (like -20) Remove
OR			
Add Condition 💌	Name Add Attribute Add Text	Percentage (like +15%), or fixed val	ue (like -20) Remove
New Condition			

The logic here is simple: if a product has "iPhone" text somewhere in the name, text "Apple" will be added before the product name.

Please note the transform set up in the second line. Most likely this new field will be used as a replacement for the default Name attribute. Since we want to output names of non-iPhone products unchanged we need to add the transform you see in the second line.

Since transformations work from top to bottom, then Custom Field will check if the product has "iPhone" text in the name, and if not it will check the condition on the second line. Since there is no special condition set, it will just output the Name attribute value as we've set it.

How to use configurable product attribute data instead of associated simple product's data

Often store catalogs are configured in the way when only parent configurable product is visible on the store when it's child simple products set to **Not Visible Individually**, but they store important attributes which you want in your feed. In this case you have to include Simple Products in the feed, but you also don't want feed to, for example, output URLs for these products. Best solution for this would be using URL of parent Configurable Product and this is what you can do with our extension.

To achieve this, simply enable Parent option:

Attributes	<link/> {type="attr	ibute" value="url" for	mat="html_escape" le	ngth="2000" optional=	"yes" paren	t="yes"} 1</th <th>link></th> <th></th>	link>	
	XML Tag	Туре	Value	Format	Max Length	Optional	Parent	Action
	link	Attribute 💌	Url 💌	HTML Escape 👻	2000	Yes 👻	Yes 💌	🥑 Update
							No Yes	

You can do the same for any attribute.

When Parent option is enabled, attribute value will be taken from Parent Configurable Product if one exists.

How to submit configurable products to Google Merchant

Related help article on **Google support site**.

To make the Google know that the simple and configurable products you submit in the feed are related you should use **g:item_group_id** tag. Add this tag like any other to your feed profile, set it to output **SKU** attribute and enable **Parent** option.

<g:item_group_id></g:item_group_id>	{type="attribute	valu	e="sku"	format="as_	is" length='	" optional	.="no" paren	t="yes"	'} <th>:item_</th> <th>group</th> <th>o_id≻</th>	:item_	group	o_id≻
XML Tag	Туре		Value		Format		Max Length	Optiona	al	Parent	1	Action
g:item_group_id	Attribute	\sim	SKU	~	As Is	~		No	\sim	Yes	\sim	Insert

With this setup Feed extension will export products with same **g:item_group_id** if they happen to be related, i.e. if they are associated products of the same Configurable Product. Then Google will check **g:item_group_id** value and treat these products as a variant of the same product.

Known issues

XML formatting error

In the most cases this error appears when your feed has special characters inside tags. Please note the line number in the error message, then open your XML feed file and check the aforementioned line. Note the tag used in this line, then open feed profile, find the tag and set **Format** to "HTML Escape"

XML Template	
Header	xml version="1.0"? <rss version="2.0" xmlns:g="http://base.google.com/ns/1.0"> <channel></channel></rss>
Item	item ▲ XML Tag for item (example for Google - item).
Attributes	<description>{type="attribute" value="description" format="html_escape" length="500" optional="yes" parent="no"}</description>
	XML Tag Type Value Format Max Length Optional Parent Action
	description Attribute Description HTML Escape 500 Yes No Vodate

Hit **Update**, then save and generate the feed.

MySQL "JOIN" error at the start of generation

Open the feed profile and find the link tag. Change the Attribute value to URL

XML Template						
Header	xml version="1.0";</td <td>> <rss version="2.</td><td>0" xmlns:g="http:/</td><td>//base.google.com/ns/1</td><td>1.0"> <channel></channel></rss></td> <td></td>	> <rss version="2.</td><td>0" xmlns:g="http:/</td><td>//base.google.com/ns/1</td><td>1.0"> <channel></channel></rss>				
Item	item A XML Tag for Item (example	for Google - item).				
Attributes	<link/> {type="attribu	te" value="configu	rableurl" format='	"html_escape" length='	"2000" optional="yes" par	rent="no"}
	XML lag	Туре	Value	Format	Max Length Optional	Parent Action
	link	Attribute 👻	Url	HTML Escape	▼ 2000 Yes ▼	No 🗸 📀 Update

Hit **Update**, then save and generate the feed.

"Daily" generation doesn't work

There are two possible causes:

- 1. Magento cron is not running. Please check **this article** to learn how the Magento cron is configured.
- 2. Feed was generated manually. In this case it may take Feed up to 48 hours to run next Daily generation routine.

Image URLs are HTTP on HTTPS site

Open the following file: /app/code/local/Amasty/Feed/Model/Profile.php

Find this line of code:

338	<pre>if (\$this->getDefaultImage() && (\$value == "no_selection" !\$value)) {</pre>
% <u>339</u>	// if no image selected. Get default image URL
340	<pre>\$value = Mage::getBaseUrl(Mage_Core_Model_Store::URL_TYPE_MEDIA)</pre>
341	<pre>. 'amfeed/images/' . \$this->getId() . '.jpg';</pre>
342	} else {
343	<pre>if (\$value && \$value != "no_selection") {</pre>
344	<pre>\$value = str_replace('https://', 'http://', \$mediaConfig->getMediaUrl(\$value));</pre>
345	} else {
346	<pre>\$value = '';</pre>
347	}
348	}
349	}

Comment it, save the changes, flush Magento cache and generate feed again.
