For more details see the XML Google Sitemap for Magento 1 extension page, part of the bestselling SEO Toolkit module.

XML Google Sitemap

With the extension, easily produce XML Sitemap for your site in efficient way. Help Google to correctly index your web store and increase positions in search results.

General Settings

Go to **Admin panel → CMS → SEO Toolkit → Google Sitemaps**

To create a new sitemap, click the *Add New Sitemap* button.

On the grid, you can see all google sitemaps, generated with the extension.

Equip the Magento store with the GDPR compliance solution.

Sitemap

General

Path to sitemap file - Specify path for XML sitemap

Max Items Per File - Specify max items per file and max file size.

Google requirements for XML sitemap:

- **No more than 50,000 URLs in a sitemap;**
- **Size no larger than 50MB;**

Products

Include products - Specify whether to include products into XML sitemap.

Include Out of Stock Products - Set to *No* to exclude out-of-stock products from XML sitemap.

Add Images - Set *Yes* to include product images into XML sitemap.

Priority - Specify priority to tell Google which pages are the most important on your site.

Frequency - Specify how often content on product pages are being updated.

Include Last Modified - Set *Yes* to include the date when the page was last modified.

Products

Include products	Yes ▼
Include Out of Stock Products	Yes ▼
Add Hreflang	No ▼
Add Images	No ▼
Use All Product Images	No ▼
Priority	1
	▲ 0.0-1.0
Frequency	daily ▼
Include Last Modified	No ▼
Batch Size	100
	▲ Indicate how many items will be handled during one iteration.

Categories

Specify similar settings for category pages by analogy with Products Pages settings.

Categories

Include categories	No ▼
Add Hreflang	No ▼
Add Images	No ▼
Priority	0.5
	▲ 0.0-1.0
Frequency	daily ▼
Include Last Modified	No ▼
Batch Size	30
	▲ Indicate how many items will be handled during one iteration.

Pages

Priority - Specify priority to tell Google which pages are the most important on your site.

Frequency - Specify how often content on product pages are being updated.

Include Last Modified - Set *Yes* to include the date when the page was last modified.

Exclude CMS Pages - Specify pages that should be excluded from your XML Google sitemap.

Tags

Include Tags - Specify whether to include tags into XML sitemap.

Extra Links

Include Extra Links - Set to *Yes* if you want to include some extra links into sitemap.

Priority - Specify pages priority as well as how often the pages are being updated.

Extra Links to include - Specify the particular extra links that should be included into your XML sitemap.

Cron Settings

Specify **Frequency** and **Start Time** for the cron job.

Change Memory Limit for Sitemep Cron Job - To change the memory limit for cron job, set to *Yes* and move over to *Limit* setting.

Limit - Specify the standard amount of memory (i.e. *512,1024,2048*) in mb to limit the cron job. In case of big-sized catalogs, we would recommend to run the cron job without limit (input -1 in the field).

Hreflang

To configure **Hreflang** feature, go to **Admin Panel > System > Configuration > Amasty Extensions > SEO Toolkit > Hreflang URLs**

Hreflang URLs Scope - Specify whether alternative links should be found within only one website (*Website*) or between several ones (*Global*).

Language Code - Specify the language of the audience you want your content introduce to. The option *From Current Store Locale* is available.

Country Code - Specify the region you want your content introduce to (optional). The options *From Current Store Default Country* and *Don't add* are available.

Language is required and should be specified first, *region* is optional: for instance, *fr-gb* means French content for British visitors.

X-default - Specify which store in the XML sitemap will be tagged as a default.

Multi-Stores CMS Pages Relation - The option allows to look for alternative links within various websites with different language and region codes.

- By ID - Relates the pages (from different stores) that have the same ID's;
- Hreflang UUID - Relates the pages (from different stores) that have the same UUID's;
- Hreflang URL Key - Relates the pages (from different stores) that have the same URL Keys;

Hreflang URLs

Hreflang URLs Scope	Global ▼
	▲ Choose **Website** to work within one website only or **Global** to work between the websites
Language Code	From Current Store Locale ▼
Country Code	From Current Store Default Country ▼
X-default	--Please Select-- ▼
	▲ If **Hreflang Scope** is **Global**, values from website scope for this setting will be ignored
Multi-Stores CMS Pages Relation	By ID ▼
	▲ Choose the way how to identify the same CMS page for different views. By Hreflang UUID option is to be specified for each CMS page manually

There is also a convenient preview box for the *hreflang* settings.

amasty

To specify UUID for particular page, go to **Admin Panel → CMS → Pages Select a page →** go to **Meta Data tab → Hreflang UUID**
