# **Guide for Advanced MSI for Magento 2**

Distribute your inventory among numerous warehouses. Level up your stock management and reduce shipping costs with a smart source selection algorithm.

- Add an unlimited number of sources
- Optimize shipping costs with a smart algorithm
- Manage stock right from the product grid
- Configure custom shipping methods and rates
- Keep your store managers timely notified

Explore our internal **Knowledge Base** to gain even more valuable insights and uncover answers to popular questions about the configuration and features of the Magento 2 Advanced MSI extension.

# Configuration

The extension settings page can be found in **Stores**  $\rightarrow$  **Configuration**  $\rightarrow$  **Amasty Extensions**  $\rightarrow$  **Advanced MSI**.

## **General Settings**

General Settings			$\odot$
Enable Module	Yes	*	
r01	Yes		
	No		
Minimal Delivery Cost Al	gorithm Settings		$\odot$
Automatic Source Selecti	ion & Shipping Cost Calcu	ulating	$\odot$

Enable Module - set to Yes to apply the extension.

Notice, that the extension works on Magento 2.3 version and higher. Contact us, if your

#### Magento version is 2.2 or lower.

## **Minimal Delivery Cost Algorithm Settings**

The extension allows you to customize the algorithm of a warehouse selection. Here you can define the automatic source selection algorithm that will be used when one product is assigned to multiple sources.

## Minimal Delivery Cost Algorithm Settings

Default Source Selection Algorithm	Comb	pined Source Selection /	Algorithm 🔹	?
[0,]	Sourc Produ	nce Priority e Priority uct Stock Availability by <mark>pined Source Selection</mark> /		
Criteria Prioritization for Combined Algorithm		Criteria	Active	?
[global]		Nearest Source	Yes 🔻	
		Available in One Source	Yes 🔻	
		Source Priority (Native Algorithm)	Yes 💌	
Distance to Warehouse Round off, Km [global]	5			

Default Source Selection Algorithm - the extension offers you 4 Source Selection Algorithms:

- **'Source priority'** algorithm chooses an optimal warehouse according to its priority in the stock assignment settings block.
- 'Product Stock Availability by Amasty' algorithm selects an optimal store by the availability of goods. The algorithm chooses the source that has all order items in stock. This helps avoid breaking the order into several shipments from different sources, which makes shipment faster and less pricey.
- **'Product Stock Distance by Amasty'** algorithm a native-like algorithm, that picks the nearest warehouse from a customer and helps you save up on transportation costs.
- **'Combined Source Selection Algorithm'** it is a custom algorithm, that uses 3 criteria above one by one until the 'perfect match' is found.

The selected algorithm will be immediately applied to the ordered items on the shipment creation page.

**Criteria Prioritization for Combined Algorithm** - set the priority of each criterion for 'Combined Source Selection Algorithm' via drag and drop.

#### How it works:

The algorithm will apply the upper criteria first. If the result consists of several sources that fit the condition of the first criteria, the list of these several warehouses will be transferred to the next lower criteria for processing. The sources that don't fit the first criteria will not be processed by the second one. But they will be available on the shipment creation page with lower priority.

**Distance to warehouse round off, km** - set the distance value that will be used in the Amasty 'Combined Source Selection Algorithm'. If the distance between the closest and other warehouses is less than the value, the warehouses are considered to be equally distant from the customer.

## **Automatic Source Selection & Shipping Cost Calculating**

## Automatic Source Selection & Shipping Cost Calculating

Enable Automatic Source Selection	Yes	•	?
			· · · · ·

**Enable Automatic Source Selection** - set to *Yes* to activate the chosen algorithm as soon as a customer places an order. The necessary source for shipment will be selected automatically and displayed to a customer with a shipping cost information. This option allows using shipping services (like UPS, USPS, FedEx, DHL) with Multi-Source Inventory. The origin sources will be chosen during order creation, and a customer will be charged for the shipping costs immediately on the checkout page. Shipping costs will be calculated for each source (warehouse) depending on its address and then summarized.

Please note, that Shipping(s) for an order will be created immediately after a click on 'Ship' button on the order details page in the admin area.

If this option is enabled, you won't be able to change items' quantity in the admin panel. But you will see all the information about the order and its shipment in the **Order View** section.

Items Shipped				
Product		Qty Shipped		
Compete Track Tote		1		
SKU: 24-WB02				

# **Manage Sources**

Note that sources are your **warehouses**. To let the extension work you need to create at least 2 sources.

Sources are the physical locations where product inventory is managed and shipped for order fulfillment. These locations can include warehouses, brick-and-mortar stores, distribution centers, and drop shippers.

To find the list of all sources, click **Manage Sources** menu tab in the admin panel. You can easily track your sources by code, name, and status. The extension allows you to **Edit** already existing sources and **Add** a new source right from the admin panel.

## Manage Sources

			Add New	Source
Search	n by keyword	Q	<b>Filters</b> Oefault View <b>•</b>	Columns 🔻
5 record	ls found	20	▼ per page < 1	of 1 >
	Code	Name	Is Enabled	Action
	Berlin	Berlin Warehouse	Enabled	Edit
	Chicago	Chicago Warehouse	Enabled	Edit
	default	Default Source	Enabled	Edit
	London	London Warehouse	Enabled	Edit
	Moscow	Moscow Warehouse	Enabled	Edit

Mind that sources can't be deleted to prevent order data loss. You can only disable sources and change the related info, including location and contacts. The code of the source can't be changed.

# **Add New Source**

To create a source, press the **'Add New Source'** button and fill in general information about a warehouse.

	← Back Reset Save & Continue
General 💉	
Name *	Berlin Warehouse
Code *	Berlin
Is Enabled	Ves Yes
Description	The Default Source must be enabled. A default source is required for single source merchants and product migration. Berlin Warehouse
Latitude	52.52
Longitude	13.405
Low Stock Notification	lowstock@email.com ×
Shipment Email Notification	shipment@email.com ×

Pay attention to the source code field. If you create a source with the code that already exists, the Magento will override the old source with a new one. It happens as it is impossible to delete sources from Magento. Find out more about the default algorithm here.

Get email notifications when an item should be shipped from a particular warehouse and on an item low stock situation. All you need to do is to specify an appropriate email in the fields **Low Stock Notification** and **Shipment Email Notification**.

For admin convenience, *Source name* and *Source Address* will be displayed in the header of Low Stock Email notification.

Then fill in warehouse contact information and address data.

Street

Postcode \*

Now you can assign products to a source (warehouse) and adjust quantity. Click **Add Products to Source** button to add new products. Edit product quantity right from the grid. You may choose multiple products and change their status in bulk. Use filters to quickly pick out the needed items. Here you can also specify the **low stock** quantity: you'll automatically get a notification when the product quantity riches this number.

	Fixed	✓ Use Shipping Provider Rate
⊙ Best Way	Table Rate	✓ Use Shipping Provider Rate

Note, that if you use the **fixed cost** for the shipping method, all predefined shipping calculations for this source will be **overridden** with this fixed amount.

Save the source.

# **Assign Sources to Stocks**

**Stocks** enable store owners to unite several sources and then link them to sales channels and salable quantities. Technically, stocks represent a virtual, aggregated inventory of products available for sale to your sales channels (currently these are websites). Each stock maps your sales channels with sources for available inventories and salable quantities. Depending on your site configuration, the stock may be assigned to one or more sales channels and sources. Through the stock, you can modify the prioritization of sources used when shipping orders and by the **Source Selection Algorithm**.

Keep in mind, that when you create a new stock, it can be saved without the assigned source, and the page will be redirected to the "New Stock" page with empty form. Find out more how the default Magento algorithm works here.

You start with a **Default Stock** assigned with the **Default Source** and your website, best used by Single Source merchants. Only the Default Source can be assigned to this stock. **Multi-Source merchants** create custom stocks for custom sources and websites as needed. You can easily do it with the help of our Magento 2 MSI extension.

To assign sources to stocks, please go to **Manage Stocks** menu.

			Sales Channels website Main Website (base)		

Then choose a necessary stock and press the **Edit** button.

General		$\odot$
Name *	Main Stock	
Sales Channels		$\odot$
Websites	Main Website       Image: Comparison of the	

Name - specify the name for your stock.

**Sales Channels** - specify the sales channel. Sales channels represent entities selling your inventory, including websites and store views. Each sales channel can be assigned only to a single stock, and a single stock can be assigned to multiple websites. After you specify the Sales Channel, any previous assignation would be removed for each selected Sales Channel. Use **Ctrl+Click** to check several values or uncheck value. All unassigned sales channels will be assigned to the Default Stock.

In the settings block find **'Sources'** tab and assign sources to the stock. You can change sources priority via drag and drop. The priority is used by 'Source priority' algorithm.

## Source Selection

#### Items Ordered

					<	1 of	1 >
Product	SKU	Qty To Ship	Available Sources				
Compete Track Tote	24-WB02	1	Source	Qty Available	Qty To Dec	duct *	
			London Warehouse	18	1		
			Moscow Warehouse	9			
			Chicago Warehouse	32	0		
Joust Duffle Bag	24-MB01	1	Source	Qty Available	Qty To Dec	duct *	
			London Warehouse	12	1		
			Moscow Warehouse	4			
			Berlin Warehouse	53			

The module automatically chooses the default source selection algorithm, determines the optimal source and the number of products to be shipped.

If the automatic shipping cost calculation is enabled, the module will choose the necessary source while a customer creates an order. If this functionality is disabled, you can change the source selection algorithm right from this page and change the quantity to deduct from each source.

Press 'Proceed to Shipment' button and ship the order.

## **Import Data**

With the extension, you can fill product quantities in a sample file and quickly import stocks for each source.

To do this go to **System**  $\rightarrow$  **Import**. In the Entity Type choose **'Stock Sources'**, then download and fill in a sample file.

Decide whether you want to update, replace or delete data by configuring 'Import Behavior'.

Set import configuration to stop import on any number of errors to prevent loading broken data or skip error entries.

Then choose a file to import (already filled in sample file) and press the 'Check Data' button.

	Check Data
Import Settings	
Entity Type *	Stock Sources
Import Behavior	
Import Behavior 🔺	Add/Update
*	Stop on Error
Allowed Errors Count *	10

Select File to Import 🔺	Choose File stock_sources (2).csv
Images File Directory	
	For Type "Local Server" use relative path to Magento installation, e.g. var/export, var/import, var/export/some/dir

Correct the mistakes and press the **'Import'** button to import stock data.

Validation Results

1	Checked rows: 4, checked entities: 4, invalid rows: 0, total errors: 0
~	File is valid! To start import process press "Import" button Import

Moreover you can export the distribution of goods in warehouses from Amasty Multi Warehouse Inventory and import it in MSI with no efforts.

Make sure that you don't change a sample file structure and that a file isn't more than 2M.

## **Export Data**

To export needed stock data, please navigate to the **System**  $\rightarrow$  **Export** tab.

Entity Type - choose Stock Sources.

Export File Format - CSV format is needed.

You may also exclude particular attribute values from the exporting if needed. In the **Entity Attributes** table tick the attribute columns you want to exclude and hit the **Continue** button.

On Nov 18, 2019, we've significantly updated the Multi Warehouse Inventory extension. You can easily migrate your data from the old version of MWI to the Advanced MSI extension or Updated MWI. Please follow the instructions below.

# **Export From Old MWI and Import to Magento Inventory Management / Updated MWI**

Before to start the data migration, please make sure, that all-important fields in the MWI (warehouse info) are filled in correctly: Warehouse Name, Warehouse Code, Country, Postcode. The data export from the Multi Warehouse Inventory can be performed only via conventional export System → Export.

Export

👤 demouser 👻

If you exported or imported only a part of warehouses and need to Export/Import the rest, please note, that **source\_codes** may not match. In this case, the CSV file will not update your database but will add data to it.

To migrate all the data correctly, you'll need to take two steps:

- Transfer the sources (warehouses)
- Transfer the filling of the sources with products

## Step 1: Transfer the sources

Please go to **System**  $\rightarrow$  **Export**. Choose the entity type **Amasty Warehouses (Sources) Export** to export the sources.

2023/05/19 08:22		23/27		Guide for Ad	dvanced MSI for Magento 2
