

amasty

For more details see how the [Custom Stock Status](#) extension works.

Guide for Custom Stock Status for Magento 2

The extension allows you to inform your shoppers about the current stock statuses of your products. You can use variables and quantity ranges to provide clear and catchy statuses to engage your customers.

- Apply various custom stock statuses via rules
- Add statuses to multiple products and product groups
- Show out of stock notifications of configurable items
- Upload catchy icons for stock statuses
- Display stock statuses based on Magento 2 quantity
- Hyvä-ready storefront and Hyvä Checkout ready

Custom Stock Status for Magento 2 is fully compatible with [Hyvä themes](#). You can find the **amasty/module-stockstatus-hyva-compatibility** package for installing in composer suggest (Note: the compatibility is available as part of an active product subscription or Support Subscription). The extension is compatible with **Hyvä Checkout**. You can find the '**amasty/module-stockstatus-hyva-checkout**' package for installing in composer suggest. The compatibility is available as a part of an active product subscription or support subscription. Visit our [FAQ section](#) to get even more valuable information and find out answers to popular questions about the configuration and features of the Magento 2 Custom Stock Status extension.

General Settings

To configure the extension, go to **Stores → Configuration → Amasty Extensions → Custom Stock Status**.

General

General

Display Default Stock Status with Custom Status
[store view]

Use Out of Stock Threshold Value for Quantity Ranges
[store view]

https://docs.magento.com/m2/ce/user_guide/catalog/inventory.html

Display Icon Only (No Status Text)
[store view]

Display only icon and no custom status text on the product view and product list pages.

Display Default Stock Status with Custom Status - select Yes to display default stock status (in stock\out of stock) next to a custom stock status, set to No to display only custom stock status.

Use Out of Stock Threshold Value for Quantity Ranges - set to Yes to apply Out of Stock Threshold Value to the quality ranged statuses.

Out of stock threshold value indicates the quantity according to which a product is considered to be out of stock. If you use a variable **qty_threshold** to highlight the precise quantity of the product in your stock status, this number is calculated this way: the product quantity minus stock threshold (the quantity which triggers the out-of-stock status).

To specify out of stock threshold value, please go to **Admin Panel → Catalog → Products** and choose the product. In the Advanced Inventory tab set the necessary threshold value.

Manage Stock

Use Config Settings

Display Icon Only (No Status Text) - set this option to Yes to display only icons for stock statuses

(without a text).

Display Settings

Expand this tab to choose whether to show custom stock statuses on:

- **Product list page;**
- **Shopping cart;**
- **Checkout;**
- **Order Confirmation Email.**

Display Settings

Display Custom Stock Status on Product List Page <small>[store view]</small>	<input type="text" value="Yes"/>	▼
Display Custom Stock Status in Shopping Cart <small>[store view]</small>	<input type="text" value="Yes"/>	▼
<small>Will display custom stock status for items in shopping cart.</small>		
Display Custom Stock Status on Checkout <small>[store view]</small>	<input type="text" value="Yes"/>	▼
Show Custom Status in Order Confirmation Email <small>[store view]</small>	<input type="text" value="Yes"/>	▼

Info Link

In this tab, you can configure the placement of a custom stock status link.

Info Link

Show Info Link <small>[store view]</small>	<input type="text" value="Yes"/>	▼
<small>The information link will lead to any CMS page and will be displayed below the Custom Stock Status</small>		
Info Link Text <small>[store view]</small>	<input type="text" value="More information on shipping"/>	
CMS Page <small>[store view]</small>	<input type="text" value="Customer Service"/>	▼

Show Info Link - enable the feature to display a link below the custom stock status.

Info Link Text - input an anchor text that will be shown to customers.

CMS Page - select the necessary CMS page to direct customers to. A drop-down contains all the CMS pages that you have in the web store.

Info link on the frontend:

Expected Date

The Expected Date section allows you to display the date on product pages when a product will be back in stock.

When the expected date functionality is enabled, the new corresponding attribute is created. Also, the attribute will be automatically added to products.

Expected Date

Use Expected Date <small>[store view]</small>	<input type="text" value="Yes"/>	<input type="button" value="▼"/>
Expected Date Format <small>[store view]</small>	<input type="text" value="F d, Y (October 09, 2020)"/>	<input type="button" value="▼"/>
Hide Expired Expected Dates <small>[store view]</small>	<input type="text" value="No"/>	<input type="button" value="▼"/>

Use Expected Date — switch this option to 'Yes' to enable the expected date functionality.

Expected Date Format — choose the expected date format.

Hide Expired Expected Dates — enable this option to hide the expected dates when they expire.

For the correct display of the Expected Date on a product page please go to **Stores → Product → Custom Stock Status → Manage Option → Add Option** and fill the new option with the expected date variable.

Manage Options (Values of Your Attribute)

Is Default	Admin *	Default Store View	
<input type="checkbox"/>		ONLY {qty} LEFT!	ONLY {qty} LEFT! <input type="button" value="Delete"/>
<input type="checkbox"/>		Back in stock soon	Back in stock soon <input type="button" value="Delete"/>
<input type="checkbox"/>		{expected_date}	Expected {expected_date} <input type="button" value="Delete"/>
<input type="button" value="Add Option"/>			

i You can use the following variables: {qty-threshold}, {qty}, {tomorrow}, {day-after-tomorrow}, {yesterday}, {expected_date} or any product attributes.

Then set the **Expected date** on product settings and choose the new custom status option from the **Custom Stock Status** dropdown.

Impulse Duffle

Custom Stock Status [global]

The current setting has the highest priority - a rule (if applied to product) will be ignored.

Expected Date [global]

< Oct 2020 >

Sun	Mon	Tue	Wed	Thu	Fri	Sat
27	28	29	30	1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30	31

Configurable Products

With the extension, you can use custom statuses for simple options of configurable products.

Configurable Products

Show Out of Stock Configurable Attributes <small>[store view]</small>	<input type="text" value="Yes, Out of stock options selectable"/> 
	<ul style="list-style-type: none">Yes, Out of stock options selectableNo, Magento logicYes, Out of stock options selectableYes, Out of stock options selectable and crossed-out
Change Configurable Product Status upon Options Selection <small>[store view]</small>	<input type="text" value="Yes"/> 
	On product page only.
Show Custom Status in Dropdowns <small>[store view]</small>	<input type="text" value="Yes"/> 

Please note that these settings switched on may degrade the performance of your store since the module is checking out the status/quantity of simple products before reflecting the status of a configurable product. For the same reason, a page with a higher number of simple products is loading longer.

Show Out of Stock Configurable Attributes:

Set to **'No, Magento logic'** to make disabled and out-of-stock products crossed-out and not selectable.

Set to **'Yes, Out of stock options selectable'** to make out-of-stock options selectable (not crossed-out) and disabled products crossed-out and not selectable.

Set to **'Yes, Out of stock options selectable and crossed-out'** to make out-of-stock options selectable and crossed-out while disabled products will stay not selectable and crossed out. Note, that this functionality is displayed only on product details pages.

Change Configurable Product Status upon Options Selection - enable this option to change product statuses for configurable products.

See how the feature is displayed on the frontend:

Show Custom Status in Dropdowns - select Yes to display custom stock status in the products options dropdowns.

Multi-Source Configuration

With the extension, you can configure and display an informative popup with the breakdown with separate custom stock statuses per sources.

To enable this functionality you should have more than one source created on your instance. To create and manage sources, please go to **Stores → Inventory → Sources**. Please check this [guide](#) to find more information about how to correctly configure your sources and stocks.

Multi-source Configuration

Show Sources Breakdown (for Product Page Only) <small>[store view]</small>	Yes
Title <small>[store view]</small>	Check availability
Display Mode <small>[store view]</small>	<div style="border: 1px solid #ccc; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">Popup</div> <div style="background-color: #0070c0; color: white; padding: 2px;">Popup</div> <div style="padding: 2px;">Classic</div> </div>
Use Separate Link for Sources Breakdown <small>[store view]</small>	Yes
Breakdown Link Label <small>[store view]</small>	Check availability per sources

⏪ Custom Stock Status Replacement

Replace Default Custom Stock Status with Source Status <small>[store view]</small>	Yes	
	If enabled, the default stock status will be replaced by status of the first (according to the source priority algorithm) source with available qty of product.	

Show Sources Breakdown Popup (for Product Page Only) - specify whether to show or not the sources breakdown popup. Currently, this functionality is available only for product pages.

Title - add the popup window title.

Display Mode - select 'Popup' to show stock status information in a separate pop-up on a product page. If you select 'Classic', the sources breakdown will be displayed on the product page as a regular stock status.

Use Separate Link for Sources Breakdown - choose 'Yes' to display the breakdown popup by the click on a separate link. If you choose 'No' here, the popup will be displayed by the click on the main product status.

Breakdown Link Label - specify the label for the breakdown link.

Replace Default Custom Stock Status with Source Status - if enabled, the default stock status will be replaced by status of the first (according to the source priority algorithm) source with available qty of product.

Please, note that if a product is assigned to multiple sources, qty based statuses are displayed based on the highest priority source. For example, if a product has 0 quantity in two or more sources, select the highest priority source in the settings to display a custom stock status.

Create Custom Stock Statuses

To create custom stock statuses, please go to **Stores → Attributes → Product** and select the attribute **custom_stock_status**.

Product Attributes						Add New Attribute
country_of_manufacture	Country of Manufacture		No	Yes	No	Web Site
custom_design	New Theme		No	Yes	No	Store View
custom_design_from	Active From		No	Yes	No	Store View
custom_design_to	Active To		No	Yes	No	Store View
custom_layout	New Layout		No	Yes	No	Store View
custom_layout_update_file	Custom Layout Update		No	Yes	No	Store View
custom_stock_status	Custom Stock Status		No	No	No	Global
custom_stock_status_qty_based	Use Quantity Ranges Based Stock Status (Deprecated)		No	No	No	Global
custom_stock_status_qty_rule	Custom Stock Status Range Product Group (Deprecated)		No	No	No	Global

features_bags	Features		No	No	Yes	Global

Add an Option

Navigate to the **Properties** tab → **Manage Options (Values of Your Attribute)** section.

Manage Options (Values of Your Attribute)

Is Default	Admin *	Default Store View
<input type="checkbox"/>	<input type="text" value="ONLY {qty} LEFT!"/>	<input type="text" value="ONLY {qty} LEFT!"/>
<input type="checkbox"/>	<input type="text" value="FREE SHIPPING!"/>	<input type="text" value="FREE SHIPPING!"/>
<input type="checkbox"/>	<input type="text" value="Back in stock soon"/>	<input type="text" value="Back in stock soon"/>
<input type="checkbox"/>	<input type="text" value="New Arrival"/>	<input type="text" value="New Arrival"/>
<input type="checkbox"/>	<input type="text" value="<i>NEW COLLECTION</i>"/>	<input type="text" value="<i>NEW COLLECTION</i>"/>
<input type="checkbox"/>	<input type="text" value="Sale!"/>	<input type="text" value="Sale!"/>
<input type="checkbox"/>	<input type="text" value="Backorder"/>	<input type="text" value="Backorder"/>
<input type="checkbox"/>	<input type="text" value="Will be available {day-after-tomorrow}"/>	<input type="text" value="Will be available {day-after-tomorrow}"/>
<input type="checkbox"/>	<input type="text" value="Expected Date {expected_date}"/>	<input type="text" value="Expected Date {expected_date}"/>
<input type="button" value="Add Option"/>		

 You can use the following variables: {qty-threshold}, {qty}, {tomorrow}, {day-after-tomorrow}, {yesterday}, {expected_date} or any product attributes.

Here you can create the necessary options for the custom stock attributes. Easily sort them via drag and drop function or delete if necessary. Use the **Add Option** button to create a new status.

You can use different variables to generate stock statuses automatically and provide your customers with the necessary message. Also, HTML tags are allowed.

To display current product quantity in particular stock status, use {qty} variable, for example: **Hurry up! Only {qty} left in stock!**

Use {qty_threshold} variable to display the product quantity minus stock threshold (the number which triggers the out-of-stock status of a product).

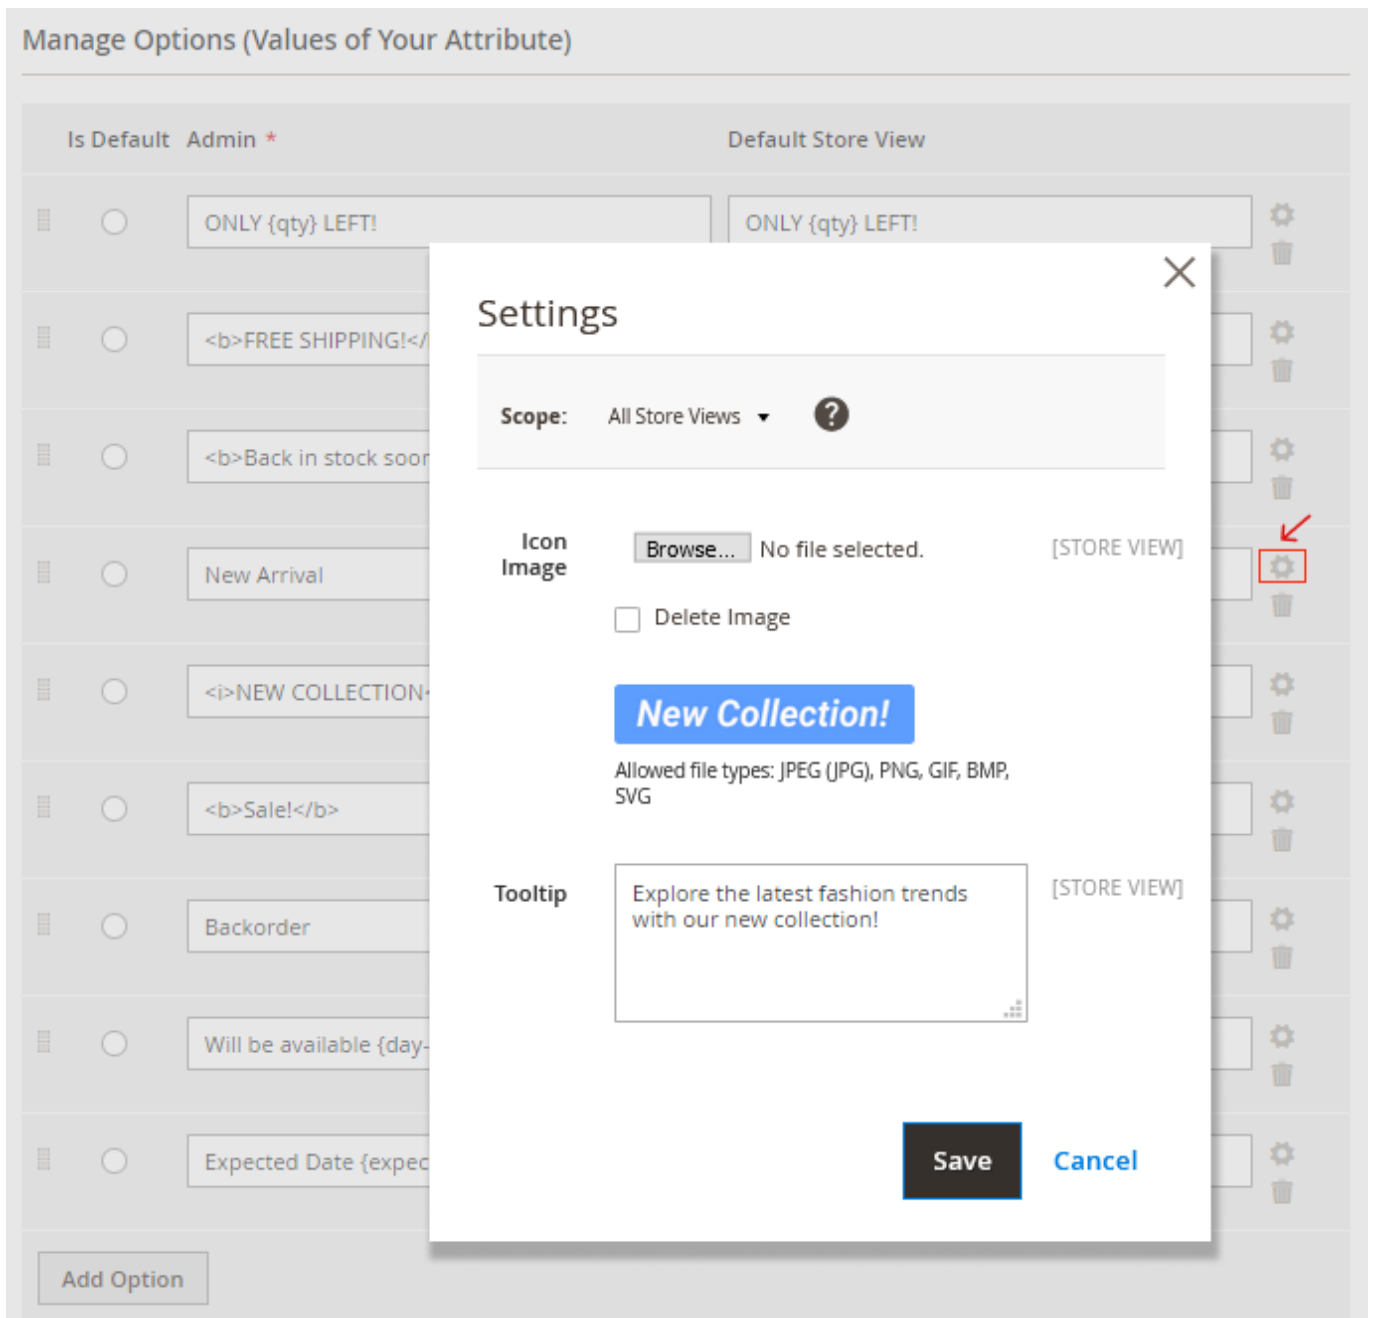

You may specify days such as `{tomorrow}`, `{day-after-tomorrow}`, `{yesterday}` or prices, e.g. `{special_price}`.

If you want to display only an icon without a text for specific statuses, but don't want to disable text messages for all of them, press `Space` button in the **Default Store View** field and leave it empty.

Is Default	Admin *	Default Store View		
<input type="checkbox"/>	<input type="checkbox"/>	ONLY {qty} LEFT!	ONLY {qty} LEFT!	Delete
<input type="checkbox"/>	<input type="checkbox"/>	Back in stock soon		Delete
<input type="checkbox"/>	<input type="checkbox"/>	{expected_date}	Expected {expected_date}	Delete
<input type="button" value="Add Option"/>				

Configure Each Status Settings

Hit the gear icon next to each status to adjust its additional settings.

Here you can specify the **Store Views** and upload **Icons** for each custom status.

Also, you can add **Tooltips** to custom statuses. Thus you will be able to provide customers with additional information without visual overload.

The extension is designed with **Multistore Support** - you can upload various images and tooltips to the same custom stock status to match the peculiarities of different stores and/or languages.

Please, don't forget to **save** the attribute, otherwise, icons won't be uploaded.

Please, don't forget to **save** the attribute, otherwise, icons won't be uploaded.

Statuses Application

Create Custom Stock Status Rules

Starting from **version 2.0.0** the extension provides store admins with the capability to apply statuses basing on **Custom Stock Status Rules**. In the previous versions, it was realized through additional attributes, such as the Quantity Ranges attribute and Product Groups attribute. Now you don't need to create additional attributes. Instead of this, you can assign custom statuses to particular products or product categories using various conditions and quantity ranges within the rule. Upon the upgrade process, the extension will automatically create rules for previously configured statuses and ranges.

To create or manage rules please go to **Catalog → Amasty Custom Stock Status → Manage Custom Stock Status Rules**

Custom Stock Status Rules

Status - enable the toggle to make the rule active.

Rule Name - specify the rule name (for internal use).

Priority - the setting defines the priority of the rule application. Note, that only one rule can be applied for one product. If there are several rules, the rule with the highest priority will be executed.

Here 1 is the highest priority. In controversial cases, for example, when there are two or more rules with the same priority and the same customer groups, the preference is given to the rule with a lower ID.

Store Views - specify the stores for which the rule will be visible.

Customer Groups - with this setting you can make the rule visible for the particular customer groups.

Default Custom Stock Status - from a dropdown window choose the main stock status for the products that will be specified below in the rule. If you miss the needed stock status, please turn to the [Create Custom Stock Status](#) section of this guide and see how to add new statuses, which then will be visible in any rule.

Default Custom Stock Status

Activate Qty Based Ranges Yes

Quantity From *	Quantity To *	Custom Stock Status *
<input type="text" value="0"/>	<input type="text" value="0"/>	Will be available {day-after-tomorrow}
<input type="text" value="5"/>	<input type="text" value="10"/>	ONLY {qty} LEFT!

Add New Range Status

'Where to display' conditions

Choose conditions to define products, for which will be displayed current custom stock status.

If **ALL** of these conditions are **TRUE** :

- Category is 4
- Is New is Yes
- Gender contains Men, Women
-

Preview Products **Hide Products**

Kindly note! Conditions are applied in accordance with chosen Store Views in general Rule settings (therefore Store View column will display only matching store views). The grid filtration is performed considering Default Store only.

Filters

14 records found 20 per page < 1 of 1 >

ID ↓	Thumbnail	Name	Type	Attribute Set	SKU	Price	Visibility	Status	Store View
1		Joust Duffle Bag	Simple Product	Bag	24-MB01	\$34.00	Catalog, Search	Enabled	All Store Views
2		Strive Shoulder Pack	Simple Product	Bag	24-MB04	\$32.00	Catalog, Search	Enabled	All Store Views

Activate Qty Based Ranges - enable the toggle to activate the quantity ranges. This means, that besides the default custom stock status, within the rule you can apply other custom stock statuses to the products, which fall under a certain quantity ranges. In such cases, the quantity range based status will replace the default custom stock status. But it will be applied for other products, which don't fall under the specified quantity ranges.

Tap the button **Add New Range Status** to create new quantity ranges and statuses. For the correct rule application, set the exact quantity in the fields *Quantity From* and *Quantity To*. Then, from a dropdown, choose the appropriate status in the tab *Custom Stock Status*. You may easily delete any of the statuses if it is not needed anymore.

'Where to display' conditions - here we can choose conditions to define the products, for which will be displayed the custom stock statuses according to our rule.

Hit the *Preview Products* button to view the products which match the conditions of the rule. Click *Hide Products* if you don't need the preview.

Due to the **integration with Magento MSI** now you can configure and display an informative popup containing the breakdown with separate custom stock statuses per source.

QTY Based Statuses for Sources

Apply Multi-source Configuration

Enable to configure custom stock statuses for sources in Sources Breakdown Popup on product page.

Quantity From *	Quantity To *	Custom Stock Status *	Source Name *	
0	0	Back in stock soon	All Sources	
1	10	ONLY {qty} LEFT!	London Store	
10	20	Sale!	Berlin Store	

Add New Range Status

Apply Multi-source Configuration - enable this setting to configure custom stock statuses for sources in Sources Breakdown Popup on product page.

Hit the **Add New Range Status** button to add a specific custom stock status per particular source, basing on the range. You can apply quantity based statuses for a specific source, so for all the sources.

Integration With Amasty Countdown Timer Extension

We designed the integration with the Amasty Countdown Timer. So now, if you have this extension installed on your store, you can associate a specific countdown timer with a custom stock status rule and therefore display it on a particular product and cart pages. You can find more information on how to create and configure countdown timers in this [guide](#).

Countdown Timer

Choose Countdown	<div style="border: 1px solid #ccc; padding: 2px;"><p>Special offer: 2 for price of one ▾</p><p>Please Select</p><p>50% off on Watch</p><p>Special offer: 2 for price of one</p><p>Winter Sale</p></div>
Display	<div style="border: 1px solid #ccc; padding: 2px;"><p>After Custom Stock Status ▾</p><p>After Custom Stock Status</p><p>Before Custom Stock Status</p></div>

Within the rule, you can choose one of the previously created countdown timers, and specify its position relatively custom stock status of a product.

Please note, that for the correct integration of Countdown Timer with the Custom Stock Status extension you should also install the **CustomStockStatusTimer** system module.

Now, please **Save** the rule.

For Particular Products

If you need to add or change the status for a particular product, you can also do it from the product settings page. Please, go to **Catalog → Products** and select a product.

Navigate to the **General** tab and select the appropriate status for the product using **Custom Stock Status** dropdown, where all custom statuses are displayed.

Improve your shoppers experience adding [Amasty One Step Checkout for Magento 2](#) to Custom Stock Status functionality.

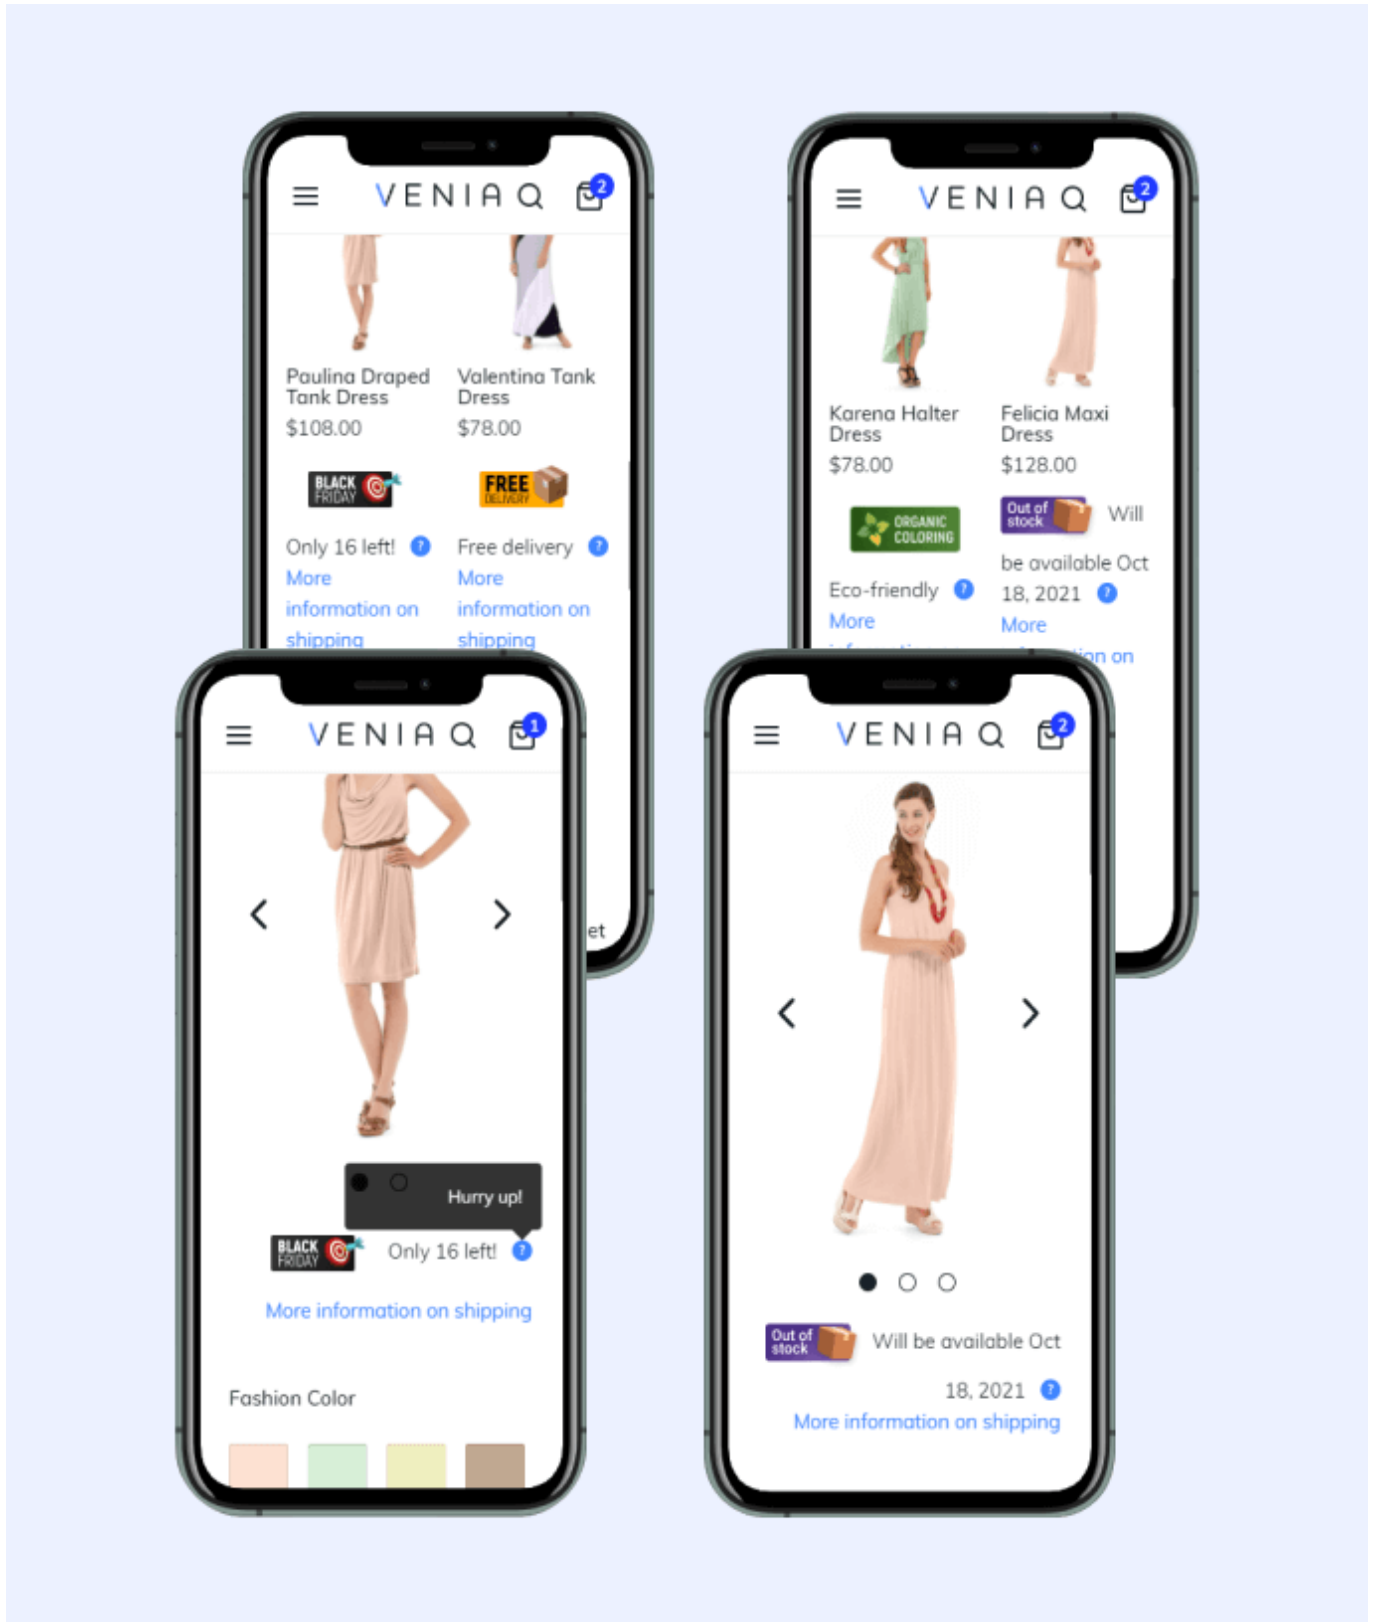

PWA for Custom Stock Status (Add-On)

Use this PWA add-on if you already have a PWA-based storefront or you are just planning to transfer your website to PWA. The add-on adjusts the functionality of the original Custom Stock Status extension by Amasty to PWA themes like Venia. Let your shoppers be properly informed about the unique stock statuses you've set, on any device.

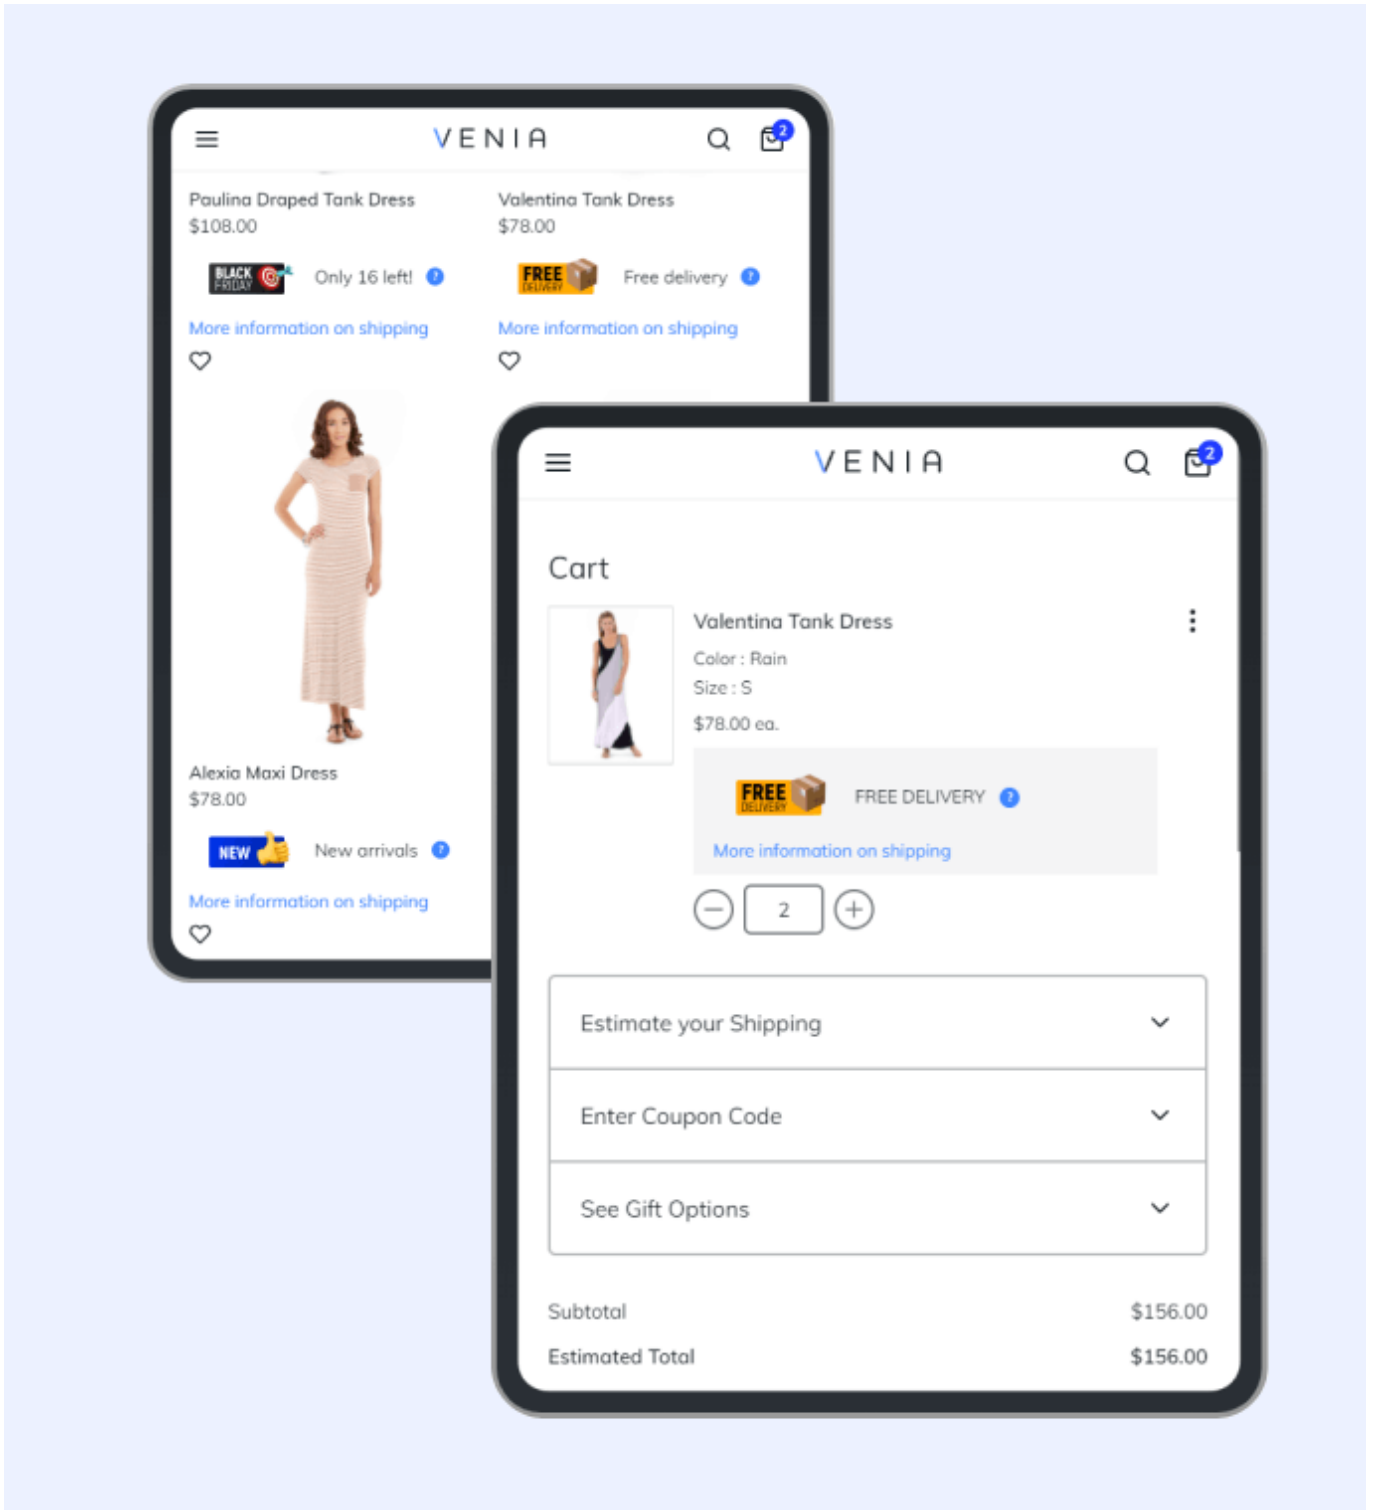

Please note that the custom stock status PWA functionality can be enabled only after purchasing the **PWA for Custom Stock Status Add-On**. Also, you need to [install PWA Studio](#) first. In order to correctly install a PWA add-on, please install the **corresponding GraphQL system package** first. For the correct name of it, please check the *composer.json* file of the main module. For example, the GraphQL system package name of the PWA add-on for the Blog Pro extension would be the following: **amasty/blog-graphql**

```
{
  "name": "amasty/blog",
  "description": "Amasty Blog Pro",
  "require": {
    "php": ">=7.3.0",
    "amasty/base": ">=1.13.4",
    "amasty/email-unsubscribe": "*",
    "amasty/cron-schedule-list": "*",
    "magento/framework": ">=102.0.0",
    "magento/module-catalog": "*"
  },
  "suggest": {
    "amasty/blog-page-builder": "Install blog-page-builder module to activate PageBuilder and Blog Pro integration.",
    "amasty/blog-graphql": "Install blog-graphql module to activate GraphQL and Blog Pro integration.",
    "amasty/module-blog-mftf-3": "Install module-blog-mftf-3 module to be able to run Blog Pro MFTF tests for Magento 2.4.0+ version.",
    "amasty/module-blog-pro-to-builder": "Install Amasty_BlogProToBuilder module to activate the integration with Custom Reports Builder extensions."
  },
  "type": "magento2-module",
  "version": "2.10.4",
  "license": [
    "Commercial"
  ],
  "autoload": {
    "files": [
      "registration.php"
    ]
  }
}
```

How it looks on mobiles:

How it looks on tablets:

Please note that by now, the PWA add-on for Custom Stock Status does not support the MSI-related functionality (manage stock status per stores).

We've also adjusted for PWA the out-of-stock functionality for the swatch display for the product options. How the adjusted logic works:

- If the setting 'Yes, Out of stock options selectable' is set to 'No', then the swatches will be clickable, the 'Add to cart' button will not be hidden, and if the product option is added to cart, the user will see the corresponding notification that this action could not be performed;
- If you choose the setting 'Yes, Out of stock options selectable', then the 'Add to cart' button will

be disabled;

- If you choose the setting 'Yes, *Out of stock options selectable, and crossed-out*', then the 'Add to cart' button will be disabled.
