

amasty

For more details see how the [Jet Theme for Magento 2](#) works.

Guide for Jet Theme for Magento 2

Trendy, responsive, customizable. The Jet theme brings both stable store performance and stunning visuals to your Magento 2 store.

- Adapt to the latest design trends without spending a fortune on custom development
- Provide customers with a smooth shopping experience on mobile and desktop
- Forget about compatibility problems and poor functionality
- Customize theme design in no time with Style Guide

Jet Theme supports the following Magento editions:

- **Magento Community**
- **Magento Enterprise (Commerce)**
- **Magento B2B**

For the correct work of all the theme features (e.g. floating shopping cart), please make sure that the Jet Theme is applied to the correct store view and consequently reflects on the frontend. Please note that out of the box features of the Jet Theme are not applicable to other themes (e.g. Luma theme). In [Jet Theme FAQ](#) you can find answers to the most popular questions about the extension functionality.

Theme Installation

The Jet theme can be installed both manually or via Composer.

Find out how to install the **Jet Theme** extension for Magento 2 via [Composer](#).

We strongly recommend you to **make a backup of your database** before theme installation. It will keep your files secure, especially if you have lots of customizations applied.

After theme installation, we recommend you to check 5 things to ensure the stability of theme work.

1. Check if the theme is assigned to all necessary websites/store views by going to **Content → Design → Configuration**;
2. Go to the website and/or store view that doesn't have Jet Theme applied to make sure everything is as it should be;
3. Go to the global theme settings and adjust them. Learn how to do this in the [Configurations](#) section of the User Guide;
4. Check newly created CMS pages to ensure that they are correctly assigned to the store view. To do this, go to **Content → Elements → Pages**;
5. It is possible, that several pages duplicates appear. It is expected behavior, as we do not delete existing pages on your instance. EXCEPTION: if you are installing the Jet theme's sample data, products and categories will be deleted and replaced with newly created sample data

Sample Data

We limited access to the sample data to prevent accidents like deleting all products in the store database. To get access to Jet Theme sample data, please [write us a ticket](#). Alternatively, you can create a ticket in your Customer Account by going to **My Account → Support Tickets**.

The Jet theme goes with sample data, for example, products, images, texts, CMS pages, etc. You can use Jet's sample data to replace the default one by Magento.

The sample data deploy **is not** a necessary step. You can skip it if you want to test the theme with default Luma sample data.

Please note that the sample data deploy deletes all existing products, orders, customers, etc, to replace them with custom data. **If you are installing the sample data over the existing store data, we strongly advise you to make a backup of all data.**

How to install sample data?

Before installing the specified Jet sample data, please install the Luma sample data first. To do so, please follow the step-by-step instructions below.

Luma Sample Data

1. Navigate to the root directory of your Magento 2 store.
2. Run the following CLI command to install Magento 2 sample data:

```
php bin/magento sampledata:deploy
```

3. To authenticate from repo.magento.com, enter your username, and password.
4. After successfully installing Magento 2 sample data, run the following commands one by one.

```
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy -f
```

Jet Sample Data

To install the Jet theme sample data, the first step is to upload the files of the Jet Sample data and then run the following commands one by one:

```
php bin/magento setup:upgrade  
php bin/magento jettheme:sampledatab:deploy --clean
```

The **php bin/magento jettheme:sampledatab:deploy --clean** command permanently deletes all existing products and categories on this Magento instance and installs the sample data of Jet theme.

This an important step that ensures the sample data is correctly installed, without mixing with previously created items.

After that, run the following strings:

```
php bin/magento indexer:reindex
php bin/magento cache:flush
php bin/magento setup:static-content:deploy -f
```

That's it — the sample data is installed to your Magento instance.

Jet Theme Configurations

To configure the Jet Theme, please go to the **Stores → Configuration → Jet Theme**.

Apply

Choose Style - choose one of the styles available in the dropdown and hit the 'Apply' button below to see how the settings below are changed according to the style configurations.

Then click 'Save' and run the following command in the console to apply style to the frontend:

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

Please check [this part](#) of the guide if you want to know how to apply different styles per the different store views.

Enable Custom Colors - Set this setting to 'Yes' to enable color scheme preset configurations section.

Please note that

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

command must be run in the console when any of the settings in the fields below have been changed.

Color Scheme Presets - In order to apply a color scheme preset on a storefront, please follow the steps below:

- 1. Make sure the value of the setting '**Enable Custom Colors**' is set to 'Yes';
- 2. Make sure this is the store view you need for changing the color scheme. If it's not, then change to the store view you need and empty all checkboxes '*Use Default*' for the section '**Color Scheme**';

If you haven't prepared any child themes on a backend yet, please consult [this part](#) of the user guide first in order to apply color scheme presets to the store views correctly.

- 3. Choose the preset you want from the '**Color Scheme Presets**' dropdown (e.g. '*Bright*');
- 4. Click on the '**Apply**' button below the dropdown. Now you can see the available color options included into the preset in the section '**Color Scheme**';
- 5. Click on the '**Save**' button to apply a preset to the store view you've selected;
- 6. Run the

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

command.

General Settings

General

Allow Access to Style Guide at Frontend 
[global]

Allow Access to Style Guide at Frontend - set to Yes to enable access to the Style Guide via frontend link. We advise you to restrict access to Style Guide in the Production environment.

To access the Style Guide, use the following link format:

```
http://example.com/amasty_jettheme/styleguide
```

For example, on the demo instance, the link looks as follows:

https://jet-theme-m2.magento-demo.amasty.com/amasty_jettheme/styleguide

The **Style Guide** is a comprehensive documentation Storybook-based tool that consists of font, layouts, elements settings. They are used to give a standardized look to the stores' frontend.

An example of a style guide page is shown in the screenshot below.

Color Scheme

The Jet theme allows you to quickly customize the colors of your store. To do that, simply choose the

colors you'd like to see for a variety of elements.

Please note that the command below must be run in the console when any of the settings in the fields of the '**Color Scheme**' section have been changed.

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

Feel free to customize colors within the ready-made presets, but make sure not to reapply the same preset again over the color scheme customizations unless you want to reset these customizations.

How to apply Color Schemes, Google Fonts and Styles from the Style Switcher to different Store Views?

With Jet Theme, you can apply different Color Schemes and Google Fonts for different Store Views. It allows for more customization options so that your storefront will get a unique design.

To do that, you need to create a child theme. It can be done in two ways.

If the Jet Theme is installed in the /vendor/amasty/

1. Create the /Amasty/ folder in the /app/design/frontend/
2. In the /Amasty/ folder create a new folder with <your_theme_name>. For example, a folder can be named something like /JetTheme_GermanStore2/
3. Copy the following files from the /vendor/amasty/theme-frontend-jet-theme/ of your Magento 2: **registration.php**; **theme.xml** and **media/preview.jpg** (here it's a required file). These files should be copied to the /app/design/frontend/Amasty/<your_theme_name> . In our example above, the full path will be like /app/design/frontend/Amasty/JetTheme_GermanStore2
4. Modify the copied *registration.php* file. You need to adjust text by switching the "JetTheme" in the 'frontend/Amasty/JetTheme' to the '<your_theme_name>', and save the file. For instance, in the example case, it should be the 'frontend/Amasty/JetTheme_GermanStore2'.
5. Modify the *theme.xml* file. In the </title> set the name of the theme, that will be used in the Admin panel. For example, 'Jet Theme by Amasty 2' or 'Jet Theme in Dark Colors' etc. See the way it looks on the screenshot below.

6. Also, in the <parent> tag set 'Amasty/JetTheme' instead of the 'Magento/blank' and save the file.
7. If you are working in the Developer Mode, you need to run the 'bin/magento setup:upgrade' command from your Magento 2 root.
8. In case you are working in Production Mode, you need to run the 'bin/magento setup:upgrade && bin/magento setup:di:compile && bin/magento setup:static-content:deploy' command from the Magento 2 root folder.

If the Jet Theme is installed in the /app/design/frontend/Amasty/

1. In the /app/design/frontend/Amasty/ folder create a new folder with <your_theme_name>. For example, a folder can be named something like /JetTheme_GermanStore2/
2. Copy the registration.php, theme.xml files and /media/ folder from the /app/design/frontend/Amasty/JetTheme of your Magento 2 to the /app/design/frontend/Amasty/<your_theme_name>. For example, the destination folder can be something like /app/design/frontend/Amasty/JetTheme_GermanStore2/
3. Modify the copied registration.php file. You need to adjust text by switching the "JetTheme" in the 'frontend/Amasty/JetTheme' to the '<your_theme_name>', and save the file. For instance, in the example case above it should be the 'frontend/Amasty/JetTheme_GermanStore2'.
4. Modify the theme.xml file. In the </title> set the name of the theme, that will be used in the Admin panel. For example, 'Jet Theme by Amasty 2' or 'Jet Theme in Dark Colors' etc. Then, in the <parent> tag set 'Amasty/JetTheme' instead of the 'Magento/blank' and hit the Save button.

5. If you are working in the Developer Mode, you need to run the 'bin/magento setup:upgrade' command from your Magento 2 root.
6. In case you are working in Production Mode, you need to run the 'bin/magento setup:upgrade && bin/magento setup:di:compile && bin/magento setup:static-content:deploy' command from the Magento 2 root folder.

After creation of a Child Theme

After you created a child theme, you need to apply it to the required Store View. To do that, please do the following steps:

1. In the Admin panel, go to **Content → Design → Configuration**
2. Press the **Edit** button near the required Store View
3. In the **Applied Theme** select the newly created theme name (in the creation process examples above, it was 'Jet Theme by Amasty 2' and 'Jet Theme in Dark Colors')
4. Hit the **Save** button

To apply various Color Schemes and Google fonts for various Store Views, you need to do the following steps.

1. First, please proceed to the Admin panel and go to **Amasty → JET Theme → Configuration**
2. In the **Scope**, select the required Store View and install all necessary Color Scheme and Google Fonts

Google Fonts

Enable Google Fonts [store view] ? Use Default
'bin/magento setup:upgrade && bin/magento setup:stamand must be run in the console after setting certain valid value in below

Google Font [store view] Use Default
Specify the Google font name. For example **Roboto**, **Open**
Some fonts use extra parameters e.g. **Molle:400i** where (100 = thin, 700 = bold)

1. Press the Save button.

Run the 'bin/magento setup:upgrade' command for Developer Mode. If you are working in Production Mode, please run the 'bin/magento setup:upgrade && bin/magento setup:di:compile && bin/magento setup:static-content:deploy' command.

You can download the [archive with sample files](#) to reproduce steps that are described earlier in the guide.

AJAX Usage Configuration

AJAX Usage Configuration

Enable AJAX Add to Compare <small>[store view]</small>	<input type="text" value="Yes"/>
	Please apply JET Theme to needed website/storeview to make this option work.
Enable AJAX Add to Wishlist <small>[store view]</small>	<input type="text" value="Yes"/>
	Please apply JET Theme to needed website/storeview to make this option work.
Enable AJAX Add to Cart <small>[store view]</small>	<input type="text" value="Yes"/>
	Please note that "Ajax Add To Cart" from our theme will be disabled automatically once Amasty Ajax Shopping Cart installed. Please apply JET Theme to needed website/storeview to make this option work.

Please apply the JET Theme to the needed website or store view to make these options work.

Enable AJAX Add to Compare - Set 'Yes' if you want the AJAX to work for the 'Compare products' feature.

Enable AJAX Add to Wishlist - Set 'Yes' if you want the AJAX to work for the 'Wishlist' functionality of the theme.

Enable AJAX Add to Cart - Set 'Yes' if you want the AJAX to work for the 'Add to Cart' functionality.

Please note that 'Ajax Add To Cart' from our theme will be disabled automatically once [Amasty Ajax Shopping Cart](#) installed.

Category Page

See 4 basic examples of how the configurations described below can be applied:

Category Page

List Mode
[store view]

Grid (default) / List	▼
Grid Only	
List Only	
Grid (default) / List	
List (default) / Grid	

List Mode - please choose one list mode from the dropdown to configure the way you want products to be displayed on category pages.

As for now, four list modes are available:

- Grid only
- List only
- Grid (default)/List
- List (default)/Grid

Products per Page on Grid Allowed Values <small>[store view]</small>	<input type="text" value="12,24,36"/>
	Comma-separated.
Products per Page on Grid Default Value <small>[store view]</small>	<input type="text" value="12"/>
	Must be in the allowed values list.
Products per Page on List Allowed Values <small>[store view]</small>	<input type="text" value="5,10,15,20,25"/>
	Comma-separated.
Products per Page on List Default Value <small>[store view]</small>	<input type="text" value="10"/>
	Must be in the allowed values list.

Products per Page on Grid Allowed Values - Here you can specify one or several values of products to be displayed per page on the category page. Please separate several values by commas for the correct work of this feature.

Products per Page on Grid Default Value - Here you can specify the number of products to be displayed per one page on a category if the Grid mode is selected as default.

Products per Page on List Allowed Values - Here you can specify one or several values of products to be displayed per page on the category page. Please separate several values by commas for the correct work of this feature.

Products per Page on List Default Value - Here you can specify the number of products to be displayed per one page on a category if the List mode is selected as default.

Please note that the number you specify in this field must be in the list of allowed values.

Allow All Products per Page [store view]

On the line with the quantity selector

The screenshot shows a product page for 'Oat & chia healthy porridge bowl'. On the left is a large image of the porridge bowl with navigation arrows. Below it are two smaller thumbnail images. On the right, the product title is displayed, followed by a 'BE THE FIRST TO REVIEW THIS PRODUCT' badge, a 'BY STOCK' badge, and a 'SKU: Oat & chia healthy porridge bowl'. A descriptive paragraph follows. Below the text is a quantity selector showing 'Qty' and '1' with minus and plus buttons, and an 'Add to Cart' button. The price '\$12.89' is shown below. At the bottom, there are logos for payment methods (MasterCard, American Express, PayPal, VISA, MIDE, Alfy) and two icons: 'ADD TO WISH LIST' and 'ADD TO COMPARE'.

Product Page

Add To Cart Button Position [store view] Under the quantity selector

Show Add To Wishlist - Enable/disable display of the 'Add to Wishlist' button for the product.

Show Add To Compare - Enable/disable display of the 'Add to Compare' button for the product.

See the frontend examples [here](#) or check our [demo](#) per store views.

Custom Header

Enable Custom Header - Set 'Yes' to enable custom header and make further configurations.

Custom Header

Enable Custom Header <small>[store view]</small>	Yes
Header Width <small>[store view]</small>	1440
Top Header Background Color <small>[store view]</small>	#fafce2 ? <small>'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when the custom color is selected</small>
Middle Header Background Color <small>[store view]</small>	#ffffff ? <small>'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when the custom color is selected</small>
Header Menu Background Color <small>[store view]</small>	#d7ecb0 ? <small>'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when the custom color is selected</small>

⊖ Sticky Header

Header Width - use this setting to specify header width, in pixels.

Please note that the

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

command must be run in the console when the custom color is selected.

Top Header Background Color - use this setting to customize the top header background color.

Middle Header Background Color - use this setting to customize the middle header background color.

Header Menu Background Color - use this setting to customize the header menu background color.

To customize other colors of the color scheme, please consult the [Color Scheme section](#) of the user guide.

Sticky Header

Please note that if the **Sticky Add to Cart (Horizontal Bar)** is also enabled, then only the Sticky

Add to Cart (Horizontal Bar) will be displayed and the Sticky header won't be visible.

⌵ Sticky Header

Enable Sticky Header <small>[store view]</small>	<input type="text" value="Yes"/>
Please note that "Enable Sticky Header" from our theme will be disabled automatically once Amasty Mega Menu installed.	
Always Display Sticky Header <small>[store view]</small>	<input type="text" value="No"/>
Hide on Scroll Down <small>[store view]</small>	<input type="text" value="50%"/>
% of the screen height after which sticky header should be hidden	
Display on Scroll Up <small>[store view]</small>	<input type="text" value="Yes"/>

Enable Sticky Header - Set 'Yes' to enable Sticky Header.

Please note that "Enable Sticky Header" from our theme will be disabled automatically once Amasty **Mega Menu** installed.

Always Display Sticky Header - Choose whether to always display Sticky Header or only if a certain condition is met. Choose 'No' to see extra configuration options.

Hide on Scroll Down - This option becomes visible only if you've chosen 'No' in the option 'Always Display Sticky Header'. Specify here % of the screen height after which sticky header should be hidden, e.g. 50%.

Display on Scroll Up - his option becomes visible only if you've chosen 'No' in the option 'Always Display Sticky Header'. Set 'Yes' to display Sticky Header on a scroll up.

This is an example of how the Sticky Header looks on the frontend:

Custom Footer

Custom Footer

Show Logo Block <small>[store view]</small>	<input type="text" value="Yes"/>	▼

Title - Here you can specify the title of the icon.

Choose icon - Choose from the library of the ready-made icons or upload your own image using the setting below.

Upload Custom Icon - Upload an image to create a custom icon not listed in the library from the setting above.

Is Enabled - Enable and disable the icon.

Store View - Choose the store views where the icon will be displayed.

Sort order - specify a sort order for the icon.

See these settings [on our demo](#).

Image Optimization

To start using the Image Optimization and Lazy Load functionality of Jet please make sure that you have installed the 'JetOptimizer' module. Installation of this module is required if you have 1.12.0 version of the Jet Theme and higher.

The correct functioning of the theme requires some special software to be installed: [JPEG optimization tool](#) / [PNG optimization tool](#) / [GIF optimization tool](#) / [WEBP tool](#).

You can install the **Webp tool package** to your server using the command

```
sudo apt-get install webp
```

. For a specific setup with versioning, use [this guide](#).

If you are not sure how to install the necessary software on the server correctly, please contact your administrator or Amasty support team.

Please note, that if you have already installed or just going to install our [Magento 2 Google Page Speed Optimizer](#) extension, then the functionality of this extension will prevail under the Image Optimization and Lazy Load functionality pre-integrated into the theme.

General Settings

Image Optimization

⌂ General Settings

Optimize Images
[store view]

Optimization Console Command
[global]

php bin/magento
amastyjet:image:optimize

Run Optimization
[global]

Run Optimization

Before run optimization all settings below this button should be saved. And Cache should be cleared.

Optimize Images - Set 'Yes (Recommended)' to enable advanced image optimization settings for your store.

Optimization Console Command - to run optimization manually, execute the following command:

```
php bin/magento amastyjet:image:optimize
```

Run Optimization - press the 'Run Optimization' button after all the optimization settings below are properly configured.

Before you press the 'Run optimization' button all settings below this button should be properly configured, saved and the Cache is cleared.

Enable Multi-Process Generation [global]	<input type="text" value="Yes"/>	
Number of Parallels Processes [global]	<input type="text" value="2"/>	
Process Images per Request [global]	<input type="text" value="3"/>	

Enable Multi-Process Generation - select 'Yes' to speed up image optimization.

'Multi-Process Optimization' significantly boosts the image optimization speed. But it generates extra load to the server as well. We recommend first to run the test image optimization process with the 'multi-process' *ON* and monitor your server performance.

The '*Multi-Process Generation*' feature needs the php extension '**pcntl**' to be installed on the server. If you enable the feature and no performance boost happens, please ask your hoster/system administrator to check if the '**pcntl**' extension installed.

Number of Parallels Processes - Specify the number of the parallel processes here.

The more parallel processes are set, the faster is the image optimization process, as well as the higher is the server load.

Process Images per Request - Enter the number of images you want to be shown instantly, per one request.

You may also optimize images in bulk using a console command (here 4 is the number of threads):

```
bin/magento amasty:optimizer:optimize -j 4</cpde>
```

Moreover, you can specify the particular pattern (*i* is the id of the pattern):

```
<code>bin/magento amasty:optimizer:optimize -j 4 -i 2
```

The more images are processed per request, the faster the optimization process is. But keep in mind that your server load is higher as well.

JPEG optimization tool - set the way to optimize JPEG images:

- Do not Optimize - select this option to forbid optimization;
- jpegoptim 100% quality / jpegoptim 90% quality / jpegoptim 80% quality - choose the quality level you want to get after compression. See the examples of optimized images right below the setting.

PNG optimization tool - select optipng to optimize PNG images.

GIF optimization tool - choose gifsicle to compress GIF files.

Create Webp Copy
[global]

When WebP format is used the extension will create a copy for every image in the WebP format. Please make sure that you have enough disc space on your server.

Create Webp Copy - choose Cwebp to create a copy for every image in the WebP format.

Create Images in Smaller Resolutions
[global]

The extension will create a copy of every image in suitable for mobile or tablet size. Please make sure that you have enough disc space on your server.

Create Images in Smaller Resolutions - choose the type of copies to be created:

- Mobile - the extension will create copies suitable for mobile devices. All copies will be placed in the automatically created folder - pub/media/amasty/amoptmobile.
- Tablet - all the copies will be created specially for tablets and placed in pub/media/amasty/amopttablet folder.

The extension will create a copy of every image in suitable for mobile or tablet size. Please make sure that you have enough disc space on your server.

Resize Algorithm
[global]

Resize Algorithm - select the algorithm according to which the images will be compressed:

- Crop - cuts pictures by size according to the device used, but not proportional to the size of the picture itself. While the height of the image would be the same, in the result the cropped image will look like the part of the original picture.

- **Resize** - compresses the images in proportion to the picture itself according to the size of the field viewed. Simply it will be the same picture, but smaller in pixels.

Dump Original Images
[global]

Yes (Recommended)
Yes (Recommended)
No

Original images will be stored in the 'pub/media/amasty/amoptimizer_dump' folder

Automatically Optimize Newly Uploaded Images in Catalog and Wysiwyg folders
[store view]

Yes (Recommended) ?

All images uploaded to the catalog or Wysiwyg folder will be optimized automatically

Dump Original Images - set this option to 'Yes' to store original images in the pub/media/amasty/amoptimizer_dump folder. It lets to collect all the original files in one place and easily update them in case the settings are changed.

Automatically Optimize Newly Uploaded Images in Catalog and Wysiwyg folders - set to 'Yes' to optimize all images uploaded to the catalog or Wysiwyg folder automatically.

All images uploaded to the catalog or Wysiwyg folder will be optimized automatically.

User Agent

Expand the User Agent tab to adjust settings for image loading according to the customer's browser user agent.

⏪ User Agent

Use User Agent for Loading Images [store view] Yes ?

Ignore Images that Contain [store view]

```
 OR 
```

Example: `` OR `` will be excluded.

User Agent for Loading Images - Set this setting to 'Yes' to enable fetching appropriate image sizes based on the user agent data, obtained from the browser.

Ignore Images that Contain - In this setting, you can specify certain images to be excluded from the loading based on the user agent info. Such images will be delivered on the users' devices in the original size.

Lazy Load

⏪ Lazy Load

Enable Lazy Load [store view] Yes

Use Lazy Loading Images [store view] Yes (Recommended)

Lazy Load Script [store view]

- jQuery Lazy Script
- jQuery Lazy Script**
- Native JavaScript Lazy Script

Please, try both scripts and choose the one that fits your system best

Enable Lazy Load - Set this setting to 'Yes' enable the Lazy Load functionality.

Use Lazy Loading Images - set to Yes to make off-screen images load only when a customer scrolls to them. It prevents pages full of images from lagging.

Lazy Load Script - you can choose between 2 lazy load scripts: jQuery Lazy Script or Native JS Lazy Script. We recommend trying both of them to choose one that fits your system best.

Preload Images [store view] ?

Desktop Preload Images Number [store view]

Tablet Preload Images Number [store view]

Mobile Preload Images Number [store view]

Ignore Images that Contain [store view] ?

Example: `` OR `` will be excluded.

Preload Images - You can decide whether to 'Preload Images' or load them from scratch when they happen on screen. Decide how many images to load by setting Preload Images Number.

Desktop Preload Images Number - set the number of images to be pre-loaded on the page from the start. You can also assign a specific number of images for tablet devices with the **Tablet Preload Images Number** and for phones with the **Mobile Preload Images Number** fields.

Ignore Images That Contain - specify the images that should not be optimized.

For better compatibility with other extensions, the **img tag** which includes empty src will be ignored.

Delete Previously Generated WebP & Resized Images

⌂ Delete Previously Generated WebP & Resized Images

Clear Generated Image Folders [global]

Clear Generated Image Folders - the [Clear Generated Image Folders](#) button deletes the optimized files from the `pub / media / amasty / folder_name` folder.

It is used if the previously selected optimization settings were inconvenient to use and there is a need to re-generate the queue and re-optimize the images.

Width

Width

Base Layout Width <small>[store view]</small>	<input type="text" value="1440px"/>	
Indent Width <small>[store view]</small>	<input type="text" value="30px"/>	

'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when custom width in px/percent is defined

Please note that 'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when custom width in px/percent is defined.

Base Layout Width - Specify the base layout width here, px.

Please note that it's highly recommended to enter a value that's higher than 980px.

Indent Width - Specify the indent width here, px.

Please note that the recommended value is ranging from 10px to 50px. If the customer uses bigger screen resolutions than set in Base Layout Width, the value will dynamically change.

Troubleshooting

In this section, you'll find answers to the most frequently asked questions.

BOOK A LIVE DEMO	REQUEST CUSTOMIZATION
----------------------------------	---------------------------------------

How to work with Child Theme?

In case your Child Theme is not from Amasty and you have trouble with the changes to colors or

fonts, then please:

A) make sure you saved the Child Theme in an Amasty folder, according to the instructions

To do that, you need to create a **child** theme. It can be done in two ways.

If the Jet Theme is installed in the /vendor/amasty/

1. Create the /Amasty/ folder in the /app/design/frontend/
2. In the /Amasty/ folder create a new folder with <your_theme_name>. For example, a folder can be named something like /JetTheme_GermanStore2/
3. Copy the following files from the /vendor/amasty/theme-frontend-jet-theme/ of your Magento 2: **registration.php**; **theme.xml** and **media/preview.jpg** (here it's a required file). These files should be copied to the /app/design/frontend/Amasty/<your_theme_name> . In our example above, the full path will be like /app/design/frontend/Amasty/JetTheme_GermanStore2
4. Modify the copied *registration.php* file. You need to adjust text by switching the “**JetTheme**” in the 'frontend/Amasty/**JetTheme**' to the '<your_theme_name>', and save the file. For instance, in the example case, it should be the 'frontend/Amasty/**JetTheme_GermanStore2**'.
5. Modify the *theme.xml* file. In the </title> set the name of the theme, that will be used in the Admin panel. For example, 'Jet Theme by Amasty 2' or 'Jet Theme in Dark Colors' etc. See the way it looks on the screenshot below.

B) if your Child Theme is some custom template other than the Jet Theme, you can change the name of the Child Theme to contain the word “Amasty”. That way the settings of the Jet Theme module for the color scheme/ fonts will affect all your themes.

How to modify contents of the footer?

In order to modify the contents of the footer, please refer to the file

```
vendor/amasty/theme-frontend-jet-theme/Magento_Theme/layout/default.xml
```

How to add more content into the Menu?

You can enhance the default Magento Menu functionality with features like image upload, different layouts for the menu display, eye-catching labels, and a hamburger menu.

For this purpose, we recommend you consider the [Mega Menu for Magento 2](#) extension, fully compatible with the Jet Theme.

CMS Blocks after installation

By default, if you are installing the Jet theme without sample data, all custom CMS blocks by Jet theme will be disabled.

It is made to ensure that no unnecessary blocks will be visible on the frontend.

To enable custom Jet theme blocks, you have to do it manually by enabling each particular block one-by-one.

Varnish compatibility

To ensure the correct extension work, please check the following configurations.

Magento is running with Magento_CSP, no Varnish

Please increase the buffer size in nginx configurations:

```
fastcgi_buffers 16 16k;
fastcgi_buffer_size 32k;
```

Magento is running with Varnish or any other proxy

Please, add to *Proxy* section the following:

```
proxy_buffers 16 16k;
proxy_buffer_size 32k;
```

The Mixin-Rewrite-Patch & how to install it

The **Mixin-Rewrite-Patch** was created as a suggested sub-component of the Jet Theme module. That's why whenever the Jet Theme is installed through the Composer, the Mixin Patch automatically appears on the bash Terminal screen as a suggestion:

```
amasty/module-lazy-load: >=1.0.0
},
"suggest": {
  "amasty/module-ajax-filters-navigation": "Please install the Lite Layered Navigation module by Amasty for free if you want to use it.",
  "amasty/aminvisiblecaptcha": "Please install the Google Invisible Recaptcha module by Amasty for free if you want to use it.",
  "amasty/module-thank-you-page": "Please install the Thank You Page module by Amasty for free if you want to use it.",
  "amasty/product-tabs": "Please install the Product Tabs module by Amasty for free if you want to use it.",
  "amasty/jet-theme-sample-data": "Install Jet Theme Sample Data to See All Features of Our Theme. After Install Just Run jettheme:sampledata:dep",
  "amasty/module-mixin-rewrite-patch": "Install mixin rewrite patch if you have a problem with extension on Magento 2.4.2+ version",
  "amasty/module-jet-theme-mftf-2": "Install module-jet-theme-mftf-2 module to be able to run Jet Theme MFTF tests for Magento 2.3.6 and higher.",
  "amasty/module-jet-theme-mftf-3": "Install module-jet-theme-mftf-3 module to be able to run Jet Theme MFTF tests for Magento 2.4.1 and higher."
},
```

- To install the patch through the Composer, please use the following command:

```
composer require amasty/module-mixin-rewrite-patch
```

- Afterward please make sure to run:

```
php bin/magento setup:upgrade
```

For more instructions on installing modules/patches through Composer, please refer to [this guide](#).

How to enable our stylized 'Maintenance Mode' page?

1. If you want to enable stylized for the Jet Theme 'Maintenance Mode' pages, please do the following:

- **if the theme is installed to the 'app/code' folder**, please navigate to 'app/code/Amasty/JetTheme/Setup/Files/errors' and copy the folder 'amasty_jettheme' to the folder 'errors' ('pub/errors') in the Magento root folder.
- **in case you've installed Jet Theme via composer**, please copy the folder navigate to 'vendor/amasty/jet-theme/Setup/Files/errors' and copy the folder 'amasty_jettheme' to the folder 'errors' ('pub/errors') in the Magento root folder.

jet

We've got something new **for you**

We're down for a short time to perform maintenance on site to give you the best possible experience. Check back soon!

2. Please follow the instructions below **in case you have the local.xml or local.xml.sample file**

before the installation of the Jet Theme on your store.

Please navigate to the *local.xml* file and add the *amasty_jettheme* into the *<skin>* parameter. In case your file is named *local.xml.sample*, then please rename it into *local.xml* and follow the instructions above.

3. Please follow the instructions below **in case you DON'T have the local.xml nor local.xml.sample file** before the installation of the Jet Theme on your store.

If you want to use our stylized '*Maintanance Mode*' page for your store, please create file named *local.xml* first, containing the following data:

```
<?xml version="1.0"?>
<config>
  <skin>amasty_jettheme</skin>
  <report>
    <action>print</action>
    <subject>Store Debug Information</subject>
    <email_address></email_address>
    <trash>leave</trash>
    <dir_nesting_level>0</dir_nesting_level>
  </report>
</config>
```

Move the file you've just created [*local.xml*] to the root of the folder '*pub/errors*'.

Then please follow the instructions from the first section of this notice for the case when you already have the *local.xml* file (see it above).

How to configure the ready-made banner slider widget for the CMS pages?

To create a new banner slider widget, please navigate to **Content → Widgets → Add Widget**.

Storefront Properties

Catalog Pages

The Catalog Pages on a Jet Theme are equipped with extra options to simplify product browsing.

The screenshot displays the 'What's on the menu?' page in the Jet theme. At the top, there is a navigation bar with 'Default welcome msg!', 'Compare 4', and 'My Account'. Below this is the 'jet' logo and a search bar. A secondary navigation bar includes 'What's on the menu?', 'Cooking', 'Discover WiseMeal', and 'What's new?'. The main heading is 'What's on the menu?'. On the left, there are 'Hide Filters' and 'Compare Products' sections. The 'Compare Products' section lists items like 'THE PULP FICTION SET' and 'FRIDAY NIGHT FULL-HO...'. The 'My Wish List' section shows items like 'Online course...', 'A dinner for two...', and 'Sicilian Mafia'. The main content area features a grid of six product cards. Each card includes an image, a title, a price, and a 'BE THE FIRST TO REVIEW THIS PRODUCT' prompt. The products shown are: 'Breakfast in Paris' (From \$23.00 / To \$28.00), 'Chorizo and pea risotto' (As low as \$6.89), 'Hainanese chicken rice' (As low as \$6.89), 'Curried cauliflower & lentil soup' (As low as \$9.45), 'White fish with Shirataki noodles' (1 REVIEW, \$14.89), and 'Oat & chia healthy porridge bowl' (\$12.89). A 'Sort By: Position' dropdown is visible in the top right of the product grid.

Hide Filters - by click, it hides all product filtering options and frees screen space to enlarge product cards.

Compare - bright floating 'Compare Products' button always visible and reminds users of products they'd like to compare and buy further.

Back to Top Button - a green button with an arrow is visible at all times and enables shoppers to get back to page top in one click.

SKU	Classic healthy porridge bowl	Banana & tahini healthy porridge bowl	Oat & chia healthy porridge bowl
Description	This very dish desires a little pause before being eaten - just look at this perfection! It's all guns blazing to make your mealtime the best time of the day: with its smell, its taste, its healthiness, and its appearance. Though being nutritional, it remains healthy and perfect to keep you fit. Order it on a special hour and get a discount!	This very dish desires a little pause before being eaten - just look at this perfection! This very dish desires a little pause before being eaten - just look at this perfection! It's all guns blazing to make your mealtime the best time of the day: with its smell, its taste, its healthiness, and its appearance. Though being nutritional, it remains healthy and perfect to keep you fit. Order it on a special hour and get a discount!

Ingredients: raspberries, orange, porridge oats, milk, banana, almond butter, goji berries, chia seeds

Ingredients: tahini, milk of your choice, porridge oats, small bananas, cardamom, toasted sesame seeds

Ingredients: gluten-free porridge oats, milled seeds with flax and chia, almond milk, dairy-free coconut yogurt, toasted flaked almonds, pink grapefruit

Short Description

We know one magical way to start any day full of energy! The secret sauce (well, there's no sauce, that's only a metaphor) is a healthy porridge bowl for breakfast. Packed with nutrients, it's literally designed to fuel your mind and body, making you ready for any challenges the day is preparing for you.
