For more details see how the [Product Option Templates](#) extension works.

# Guide for Product Option Templates for Magento 2

Attract more customers to your store by providing multiple product variations with Magento 2 Custom Option. Create an unlimited number of custom option templates, and promptly assign them to your products in bulk.

- Easily offer extra products and services
- Customize options with image, text and color swatches
- Configure smart option dependencies
- Quickly assign option templates to multiple products
- Add free and paid accompanying items to products
- Hyva-ready storefront and Hyva Checkout compatible by default
- WCAG compliance (for Luma Theme)

The Product Option Templates extension for Magento 2 is **read compatible with GraphQL**. Now you can expose the data you need via GraphQL queries.

The extension is compatible with **Hyvä Theme** (the compatibility is available as a part of an active product subscription or support subscription). You can find the 'amasty/module-prot-hyva' package for installing in composer suggest.

## Easily create product option templates

With Magento 2 Product Custom options extension, you can create multiple custom options templates and accurately arrange options for any product. Thus you can easily add such product variations as size, color, print, material, brand, related items or services, etc. To do this, please go to **Catalog → Products**.

---

**Template Name \***

One template can have multiple Customizable Options incorporated into it. Each change made inside this template will be applied to each product into which that template was added.  
(instantly upon saving changes in product if there are less than 100 products to update, upon nearest Cron run otherwise).

[Add Option](#)

**Template Name** - give a name to your template.

Each template can contain multiple customizable options incorporated into it. Create as many options

as you need via the button **Add Option**. In this tab, you can specify the **Option Title** and **Option Type**. Mark the option **Required** if needed. Use any input type according to your specific needs: text field, text area, file, drop-down, multi-select, checkboxes, radio buttons, date, time, date & time.

Then, add the option values (product variations) via the button **Add Value**. Fill in the option values prices, if the overall product price should differ depending on product variations (e.g. different type of material, size, etc.) In this case, the price specifies the surcharge of the option and its value depends on the price type.

**Fixed** - select this price type and the exact sum of money will be added to the product price.

**Percent** - choose this option to add percent amount to the product price.

Leave the price fields empty if the overall product cost doesn't change depending on option values.

Specify the option values **SKUs**. Easily delete any value via the **recycle bin** button. Note that this

operation cannot be undone.

<input type="text" value="Viscose"/>	<input type="text" value="\$ 2.00"/>	<input type="text" value="Fixed"/>	<input type="text"/>

Depends on:

Custom Option Title Custom Option Value

?

Note, that each change made inside a template will be immediately applied to each product where this template was added.

Now, you can **Save** the product with the template.

## Duplicate product options in one click

Duplicate custom product options by clicking on a little 'copy' sign on the right upper corner of the template's frame. After clicking, the option would be immediately copied and displayed on the bottom, below other product options. You'll recognize it by a title starting with "Copy of [your product option's name]".

Please note that by duplicating an option, it would be duplicated with its dependency.

## How to custom stylize options in templates

With this feature, you can stylize custom options and their values by specifying font size, font color and also by downloading custom images. You can find more info below on how to configure swatches from the custom options and stylize them.

Please note that only 'Drop-down' and 'Multiple select' types of options could be used for the creation of swatch options. As per all the rest option types, you'd be able to customize font and color of the text only.

## Creating custom options as color swatches

1. Select the option type 'Multiple select' or a 'Drop-down' and then tick 'Use swatches' checkbox;
2. Set up an option title (e.g. 'Blue') and then click on an empty swatch box in the 'Swatch column' to pick up the color you need from the palette. Add as much color options as you need;
3. Save the template and check out how the result is displayed on the front.

The screenshot shows the configuration interface for a product option titled "Color". The "Option Type" is set to "Drop-down" and "Use Swatches" is checked. The "Option List Type" dropdown is open, showing "Horizontal" as the selected option. Below, a table lists four color swatches: Blue, Green, Red, and Golden. Each swatch has a corresponding color box and a price type of "Fixed". A context menu is open over the "Blue" swatch, showing options: "Choose a color", "Upload a file", and "Clear". At the bottom, there is a "Depends on:" section with a dependency on "Custom Option Value" and an "Add Dependency" button.

Title *	Swatch	Price Type
Blue		Fixed
Green		Fixed
Red		Fixed
Golden		Fixed

This is an example of customized color swatches of a 'Horizontal' **Option List Type**.

## How to create option dependencies

First, you need to make sure that you have at least two options united by one template, otherwise, it would not be possible to select a child option.

⏪ Watch extra services 

**Template Name \***

Watch extra services

One template can have multiple Customizable Options incorporated into it. Each change made inside this template will be applied to each product into which that template was added. (instantly upon saving changes in product if there are less than 100 products to update, upon nearest Cron run otherwise).

**Add Option**

< 1 of 1 >

---

⏪  Extended Warranty  

⏪  Spare bracelet  

For example, there are two options within the template 'Watch extra services', which means that the options 'Extended Warranty' and 'Spare bracelet' could be configured to be dependent (i.e. selected as a child) one to each other.

Hit the 'Add dependency' button below the child option (e.g. the 'Extended Warranty') and then select from the dropdown a parent option thus making it dependent (e.g. the 'Spare bracelet').

### Extended Warranty

**Option Title \***  **Option Type \***   **Required**

**Font Color**  **Font Size**  px.  **Use Swatches**

Title *	Price *	Price Type	SKU
<input type="text" value="6 months warranty"/>	<input type="text" value="\$ 1.00"/>	<input type="text" value="Fixed"/>	<input type="text" value="6-months"/>
<input type="text" value="12 months warranty"/>	<input type="text" value="\$ 2.00"/>	<input type="text" value="Fixed"/>	<input type="text" value="12-months"/>
<input type="text" value="24 months warranty"/>	<input type="text" value="\$ 4.00"/>	<input type="text" value="Fixed"/>	<input type="text" value="24-months"/>

**Depends on:**

Custom Option Title	Custom Option Value
<input type="text" value="-- Please select --"/>	<input type="text" value="-- Please select --"/>
<input type="text" value="Spare bracelet"/>	

If the child option is not specified for a certain parent one, then no dependency option would be displayed on the frontend.

It's possible to create dependencies only for the *non-required options*. I.e. if you tick **'Required'** for the parent option, the button **'Add dependency'** automatically becomes disabled.

Please also note that it's possible to create dependencies only from the select options (dropdown, checkbox, radio button, multi-select).

## AND/OR logic of option dependencies

With Product Option Templates for Magento 2 you can create dependencies working based on two types of logic for the available product options: 'AND' and 'OR'.

There is AND logic between separate dependency lines and OR logic between several option's values within one line.

### How the 'OR' logic works and how to configure it

The 'OR' logic helps you to offer an additional option to a customer whether a customer chooses a 'parent option A' OR a 'parent option B'.

*For example*, whether a customer picks the 'Green Gift Box' OR the 'Silver Gift Box', the option to choose a 'Gift Wrap' would become equally available (shown up on the frontend).

Please find an example of the 'OR'-rule dependency configuration on the image below.

Gift wrap (Vertical type)

Option Title \*  Option Type \*  Required

Font Color  Font Size  px. Use Swatch  Option List Type

Title *	Swatch	Price *	Price Type	SKU
<input type="text" value="Floral wrap"/>		<input type="text" value="\$ 3.00"/>	<input type="text" value="Fixed"/>	<input type="text" value=""/>
<input type="text" value="Christmas wrap"/>		<input type="text" value="\$ 3.00"/>	<input type="text" value="Fixed"/>	<input type="text" value=""/>
<input type="text" value="Ornamental wrap"/>		<input type="text" value="\$ 3.00"/>	<input type="text" value="Fixed"/>	<input type="text" value=""/>

Depends on:

Custom Option Title  Custom Option Value

Green

Purple

Silver

## How the 'AND' logic works and how to configure it

If you want your customers to see some options only in case they choose two or more parent options together (e.g. a 'parent option A' AND a 'parent option B'), then you should configure the 'AND'-based logic of dependency.

For example, it helps if you want a customer to be able to choose a spare watch bracelet for free only in case this customer has chosen the '12' or '24 months warranty' and the 'Extra fast delivery'.

Thus, in case a customer chooses the '6 months warranty' and the 'Self-pickup delivery' options, he would not be able to see the 'Free spare bracelet' option. Neither a customer would see it if he chooses the '6 months warranty' and the 'Extra fast delivery', as we have excluded the '6 months warranty' option from our strict 'AND' rule.

Please find below an image of how the configurations for this example would look like.

The screenshot shows the configuration interface for a product option titled "Spare bracelet". The interface is organized into several sections:

- Option Settings:** Includes fields for "Option Title" (Spare bracelet), "Option Type" (Drop-down), and a "Required" checkbox.
- Appearance Settings:** Includes "Font Color" (set to #5dc034), "Font Size" (0 px), "Use Swatches" (checked), and "Option List Type" (Horizontal).
- Option Values Table:** A table with columns for Title, Swatch, Price, Price Type, and SKU. It contains two entries: "Free spare bracelet (Black)" and "Free spare bracelet (Red)", both with a price of \$ 0.00 and a fixed price type.
- Dependencies Section:** Titled "Depends on:", it features two dependency rules. The first rule is for "Extended Warranty" and is configured to show the option only if both "12 months warranty" and "24 months warranty" are selected. The second rule is for "Delivery" and is configured to show the option only if both "Door delivery" and "Extra fast delivery" are selected. The word "AND" is written in large orange letters between the two dependency rules, indicating the logical relationship.

Here's an example of how it would look like on the frontend:

## Assign option templates to products

Once a template is created, you may easily assign it to a particular product or to multiple items. Therefore, there are 2 ways to assign options for goods: in each product settings or via mass action in a product grid. Any template changes will be automatically applied to all assigned products.

Please, return to the Product Grid: **Catalog → Products**.

Let's see how to assign a template to a particular product on the product settings page. Open any product settings page and scroll to **Customizable Option Templates by Amasty** tab.

### Customizable Option Templates by Amasty

After saving this product with Amasty Product Option Template(s), please assign it to additional products through Product Grid's mass actions menu as necessary.

'Add Existing Template' allows to add a particular existing template into particular product's configuration.

Once saved, the template can be unassigned from product by using trash cart icon.

The template can also be deleted from templates grid at [Templates list](#)

Add Existing Template

Add New Template

Click the **Add Existing Template** button to open the templates list. Choose the template, you'd like to add to the product and hit **Add** in the top right corner.

The screenshot shows a 'Select Template' modal window. On the left is a sidebar with navigation icons for SALES, CATALOG, CUSTOMERS, AMASTY, STORES, and SYSTEM. The modal has a search bar at the top right with an 'Add' button. Below the search bar is a 'Filters' button. The main content area shows '6 records found (2 selected)' and a pagination control set to '20 per page' on page '1 of 1'. A table lists the templates:

<input type="checkbox"/>	ID	Name
<input checked="" type="checkbox"/>	2	Bags Colors
<input type="checkbox"/>	4	Watch extra services
<input type="checkbox"/>	5	Gift Box
<input type="checkbox"/>	6	Material
<input type="checkbox"/>	7	Video guide
<input type="checkbox"/>	9	Delivery

Check the template options on the product settings page and save the product.

You may apply either one or multiple templates to any product.

Also, you can save your time by assigning a template **to multiple products via mass action**. Choose all the products you need, using filters.
