Ultimate Guide for Magento 2 Reindex from Admin

Easily reindex data right from the admin panel. The extension allows you to avoid cart abandonment and lagging.

- Make reindexation automatic and simple
- Perform all the actions in a useful grid
- See the reindexation live status

Index Management

To configure the extension, please go to **System → Index Management**.

On a handy **grid** you can see all necessary information in one place:

Indexer - the name of the object that creates an index. Magento accumulates data into special tables using these indexers.

Description - here the type and the operations of reindex performed are specified.

Find out more about the indexing [here](#).

Mode - active mode of the indexer. *Update on Save* - updates index data immediately after the changes.

Status - see the live status of the indexation: **Reindex Required**, **Processing** or **Ready**.

Updated - check the date of the latest reindexation.

To reindex data, choose the indexers you need and tick them. In the **Actions** dropdown menu choose the action **Reindex**.

Reset Indexes

Sometimes a few indexes can get stuck. To fix that, you need to run the **php bin/magento indexer:reset** command. There is also an easier way.

Simply click on the **Reset** button on the grid to fix a specific index. Then, it will be reindexed.
