amasty

For more details see how the Special Promotions for Magento 2 extension works.

Guide for Special Promotions for Magento 2

Add 16 additional promo actions to your default cart price rules. Run numerous promotions to easily attract customers with new irresistible offers and increase sales.

- Promotions for cheapest/most expensive items
- Deals with free products
- Create fixed and percent discounts
- Offer specials with quantity steps
- Launch promo campaigns based on the spent amount
- NEW Run promotions with bundle products
- ADA & WCAG compliant (Lite and Pro versions for Luma Theme)

The extension is compatible with **Hyvä Theme**. Please, read **Additional packages (provided in composer suggestions)** in this User Guide to know more about package for installing in composer suggest. The compatibility is available as a part of an active product subscription or support subscription.
Magento 2 Special Promotions (**Pro** version too) extension is compatible with **GraphQL Application Server**. You can find the **amasty/module-graphql-application-server-compatibility** package for installing in composer suggest.

General rules of working with coupons:

- Coupon code should be unique for each rule. It means, that you can't create different promotion rules for one coupon name. For example, you have two rules: A and B. The rule A: get a 10% discount by the coupon "amtest". The rule B: get a 35% discount by the coupon "amdiscount". If both rules have name "amtest", then a customer will get 45% discount. You shouldn't use the same name for different coupons in order not to apply several rules for one coupon.
- Coupons name are case-insensitive. Therefore, the coupon name "CHEAPEST" and the coupon name "cheapest" will be the same for the extension.

In **Special Promotions (Pro) FAQ** you can find answers to the most popular questions about the extension functionality.
Please note that the Special Promotions and Special Promotions Pro extensions are compatible with default **GraphQL**.
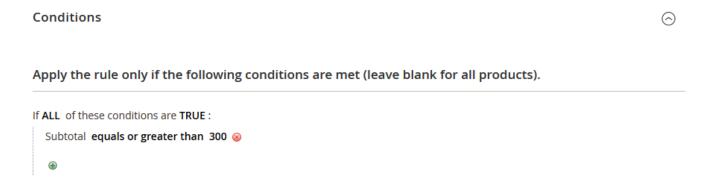

Difference between Actions and Conditions

What is the difference between product **conditions** in the Actions tab and in the Conditions tab?

Actions ✏️   ⌃

Apply	Fixed amount discount ▾
Discount Amount *	10
Maximum Qty Discount is Applied To	0
Discount Qty Step (Buy X)	1
Apply to Shipping Amount	◯ No

Discount amount is applied to subtotal only

Discard subsequent rules	◯ No

Apply the rule only to cart items matching the following conditions (leave blank for all items).

If **ALL** of these conditions are **TRUE** :

Category **is one of** 17,25 ⊗

⊕

Apply 10% discount on products from categories 17 and 25...

Conditions   ⌃

Apply the rule only if the following conditions are met (leave blank for all products).

If **ALL** of these conditions are **TRUE** :

Subtotal **equals or greater than** 300 ⊗

⊕

But only if Subtotal reached $300

Conditions in the **'Conditions' tab** control *when* the rule will be applied. For example, if the Subtotal has reached a certain value or if there are some specific products in the cart.

Conditions on the Actions tab control to *which products* discount will be applied. For example, you can restrict discount application on the product from only a certain category.
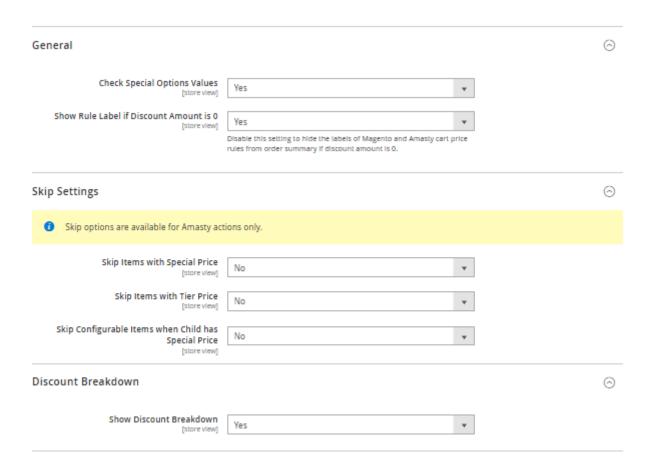

Easily set a promotion with our **Step-by-Step Video Tutorial**

Configure General Settings

To Configure general extension settings please go to **Stores → Configuration → Special Promotions**

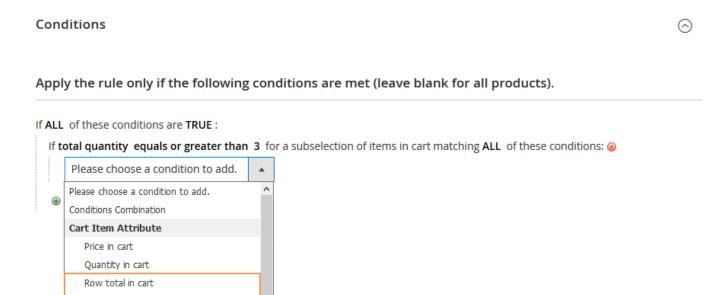

Check Special Options Values - If the option is set to 'Yes' the custom options for the rule conditions will be enabled. Thus, you can use the 'Custom option SKU' condition, for example, to trigger a discount rule only when a particular Special Option was selected for a product. See the

example of custom options below.

Show Rule Label if Discount Amount is 0 - If this setting is enabled, a label with this information will still be displayed in the shopping cart and at checkout, even if the discount applied by the rule is zero. Please, note, that this setting is enabled by default.

If you set custom options for any specific products in your store, you can use them for creating flexible rules. Specify the necessary custom option value or custom option SKU to apply only to particular products.

Skip Items with Special Price - Set this option to 'Yes', if you don't want to apply coupons and shopping cart price rules to the products with a special price.

Items with special prices from the Catalog Price Rules will be skipped as well.
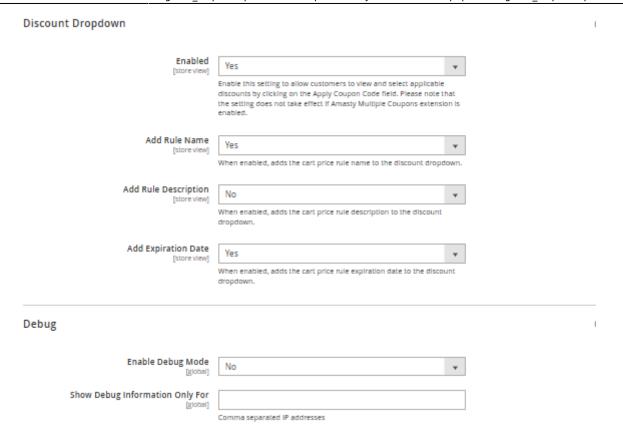

Skip Items with Tier Price - Set this option to 'Yes', if don't want to apply coupons and shopping cart price rules to the products with tier price.

Skip Configurable Items when Child has Special Price - Set this option to 'Yes', if don't want to apply coupons and shopping cart price rules to configurable products if their child items have a special price.

Show Discount Breakdown - enable the option to display the list of discounts with discounted products. The customer will clearly see which products are discounted and what is the discount amount.

Discount Breakdown functionality of the **Special Promotion Pro** module is now compatible with both **Hyvä Theme** and **Hyvä Checkout**. You can find the 'amasty/module-special-promotions-hyva' package for installing in composer suggest (Note: the compatibility is available as a part of an active product subscription or support subscription).

Discount Dropdown

Enabled [store view]	Yes ▼

Enable this setting to allow customers to view and select applicable discounts by clicking on the Apply Coupon Code field. Please note that the setting does not take effect if Amasty Multiple Coupons extension is enabled.

Add Rule Name [store view]	Yes ▼

When enabled, adds the cart price rule name to the discount dropdown.

Add Rule Description [store view]	No ▼

When enabled, adds the cart price rule description to the discount dropdown.

Add Expiration Date [store view]	Yes ▼

When enabled, adds the cart price rule expiration date to the discount dropdown.

Debug

Enable Debug Mode [global]	No ▼
Show Debug Information Only For [global]	

Comma separated IP addresses

Discount Dropdown - set to **Yes** to display on the page all the discounts available in the dropdown on the shopping cart and on the checkout page.

To display coupons from the rules in the dropdown within the coupon entry field on the checkout page, you must enable the **Show Coupon Codes in the Discount Dropdown (Marketing > Cart Price Rules > Edit rule)** setting.

When **Show Coupon Codes in the Discount Dropdown** setting is enabled, all active coupons will appear in the coupon entry field at checkout (but not in the shopping cart). However, if a coupon does not meet the conditions of the rule, no discount will be applied upon its use.

You can check if all the configurations and rules you've set up are applied correctly. The debug mode will enable you to see the amount of discount applied to each particular items. You will see this information on the cart page.
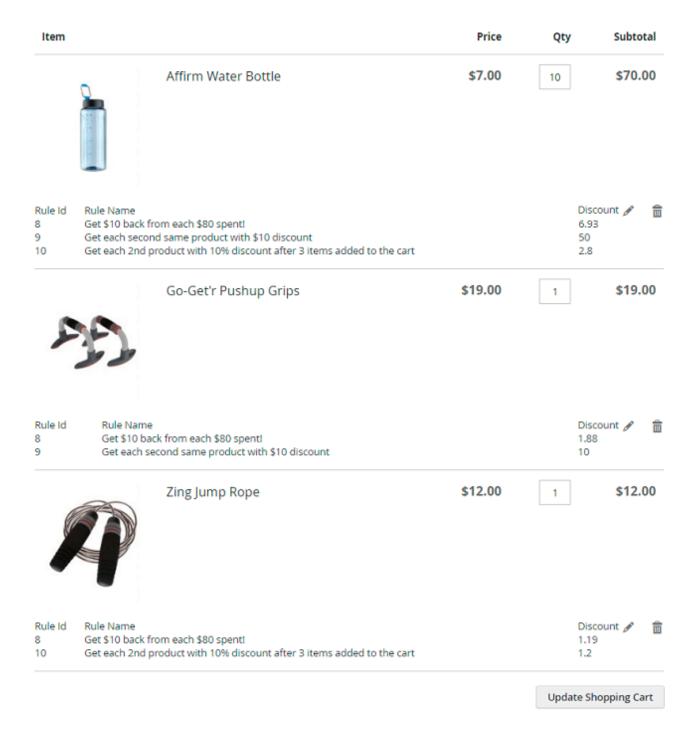

Enable Debug Mode - set to **Yes** to enable the debug mode. When enabled, you will see the discounts applied to each particular item in the cart. The feature is designed to let you make you sure that all the configurations and settings work as expected. It is not available to customers.

Show Debug Information Only For - specify IP addresses, separated by a comma, to which the debug mode is applied. If you leave this field empty, nothing will be displayed.

This is the example of how the debug mode works:

Shopping Cart

Item		Price	Qty	Subtotal
	Affirm Water Bottle	$7.00	10	$70.00

Rule Id	Rule Name	Discount 🖉 🗑
8	Get $10 back from each $80 spent!	6.93
9	Get each second same product with $10 discount	50
10	Get each 2nd product with 10% discount after 3 items added to the cart	2.8

Item		Price	Qty	Subtotal
	Go-Get'r Pushup Grips	$19.00	1	$19.00

Rule Id	Rule Name	Discount 🖉 🗑
8	Get $10 back from each $80 spent!	1.88
9	Get each second same product with $10 discount	10

Item		Price	Qty	Subtotal
	Zing Jump Rope	$12.00	1	$12.00

Rule Id	Rule Name	Discount 🖉 🗑
8	Get $10 back from each $80 spent!	1.19
10	Get each 2nd product with 10% discount after 3 items added to the cart	1.2

Update Shopping Cart

Under each item, on the left side, you'll see the applied rule id and its name. On the right side, on the opposite of the rules, you will see the amount of discount applied.
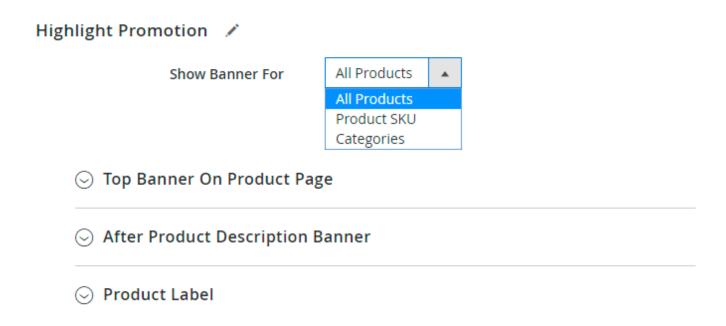

How to Highlight Promotions?

How to make so that your customers will instantly see the promotion campaigns you launch? The answer is evident - highlight them with banners and labels.

Please, go to **Marketing → Cart Price Rules → Add New Rule** button. Then, create any promotion based on the action, provided by the extension. Know how to configure any type of promotions in the section How to set up a promo rule? See the examples.

Please pay your attention that **the 'Highlight Promotion' feature** is available only if one of the actions provided by Special Promotions is selected.

After all the necessary configuration is set up, open the **Highlight Promotion** tab.

At first, specify for which products the banners/labels should be shown. You can choose to display them for all products, for particular product categories or only for special products.
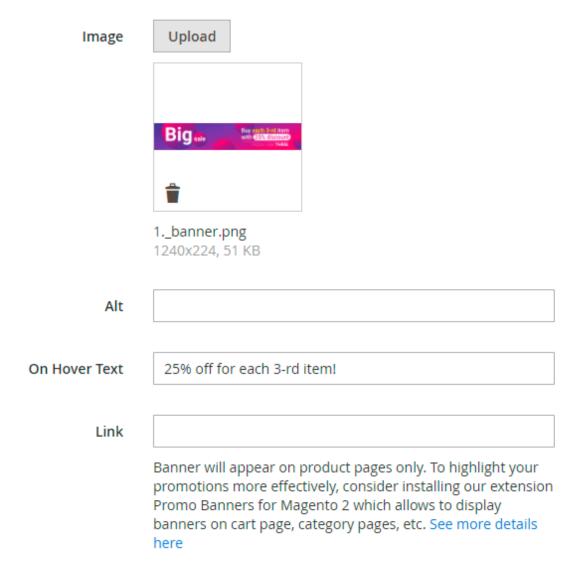

When displaying banners or labels for definite products, you should specify the necessary product categories or product SKUs.

Then choose which kind of banners to display:

1) **Top Banner On Product Page** - the banner will appear on top of product pages.
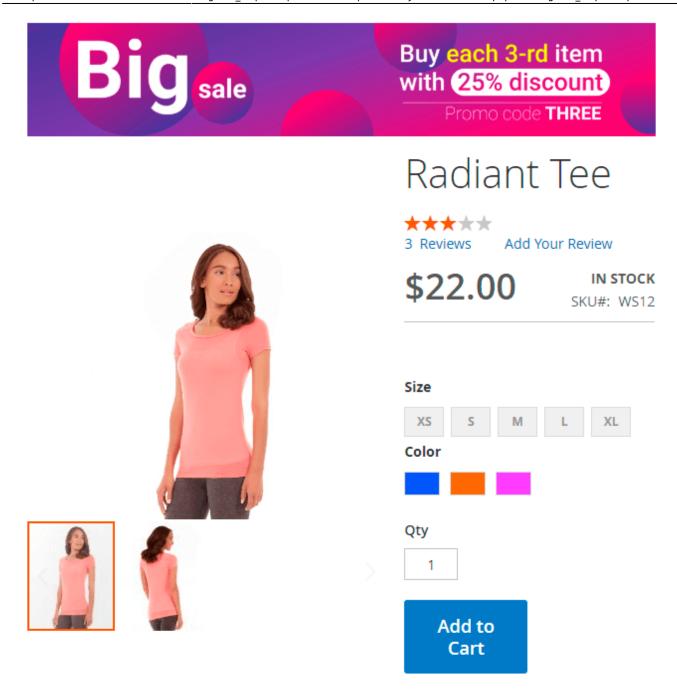

⌃ Top Banner On Product Page ✎

Image Upload

1._banner.png
1240x224, 51 KB

Alt

On Hover Text 25% off for each 3-rd item!

Link

Banner will appear on product pages only. To highlight your promotions more effectively, consider installing our extension Promo Banners for Magento 2 which allows to display banners on cart page, category pages, etc. See more details here

On Hover Text - specify the text that will be shown on a mouse hover.

Link - define the page to which the banner should lead.

Here's the example of how it will display on the frontend:

2) **After Product description Banner** - the banner will appear on product pages, after the products description.

⌃ After Product Description Banner ✎

You can combine different banners types and show them together with banners.

How to set up a promo rule? See the examples

To create promotion rules please go to the admin panel → **Marketing** → **Cart Price Rules** and click
**'Add New Rule'** button.
Rest API support

Special Promotions for Magento 2 allows you to easily create cart price rules via REST API.

Rule duration

Now, when configuring a cart price rule in the Community edition (CE) of the Special Promotions and
Special Promotions Pro extensions, you can set not only start and expiry dates of the rule but also the
exact time in the **From**/ **To** settings.

However, it isn't recommended to install the package if you have the Enterprise edition (EE) of the extension to avoid conflicts.

Please note that this functionality is only available as part of an active product subscription or Support subscription. You can find the **amasty/module-rules-duration** package for installation in Composer suggest.

When creating a new cart price rule **via API**, it is necessary to specify the time for the **From/To** settings in the UTC format taking into account the selected locale. To check this, please navigate to **Stores → Configuration → General → General → Locale Options → Timezone**.

Locale Options

Timezone
[website]　Moscow Standard Time (Europe/Minsk)　▾

Locale
[store view]　English (United States)　▾

Weight Unit
[store view]　lbs　▾　☑ Use system value

First Day of Week
[store view]　Sunday　▾　☑ Use system value

For example, if you want to set a 1-day duration rule (May 30, 2023) with the UTC + 03:00 selected, include the following in the request:

```
"from_date": "05/29/2023 21:00",
```

```
"to_date": "05/30/2023 20:59"
```

Common settings

These settings are common among most of the actions and work quite the same.

Discount Amount (in %) *	25
Maximum Qty Discount is Applied To	10
Max Amount of Discount	
Discount Qty Step (Buy X)	3
Calculate Discount Based On	Price (Special Price if Set) ▼
Use General Skip Settings	◯ No
Skip Items with:	Special Price (incl. Catalog Price Rules) Tier Price Cart Price Rules Discount Configurable when Child has Special Price
Apply to Shipping Amount	◯ No
	Discount amount is applied to subtotal only
Discard subsequent rules	◯ No

- **Discount Amount (in %)** - the percentage of the fixed value which is deducted from the order totals when the promotion rule is activated.
- **Max Number of Sets Discount is Applied To** - the maximum number of items to which the discount can be applied. For example, if your promotion is set to apply a discount on each second product in the cart and you set this setting to '2', the discount will be applied only twice even if a customer has 5 or more items in the cart.
- **Max Amount of Discount** - sets the maximum discount amount that can be applied to one rule.
- **Discount Qty Step (Buy X)** - in most cases, this setting controls the step by which a discount will be iterated. For example, if you set '2', the discount will be applied to every second product in the cart: 2, 4, 6, etc.
- **Calculate Discount Based On** - this setting controls how the discount value is calculated.
- **Use General Skip Settings** - if enabled, general Skip settings will be apply to created rule.
- **Skip Items with** - choose needed option from the list to skip products with *Special Price (incl. Catalog Price Rules), Tier Price, Cart Price Rules Discount or Configurable when Child has Special Price* while creating the rule.

When selecting the *Skip Items with: Cart Price Rules Discount* option, if another rule is used, all linked products will be considered as single items and skipped. Thus, the discount will only apply to items that were not used in the rule before (neither as a condition for applying the rule, nor as a discount item).

- **Apply to Shipping Amount** - when it's enabled, the discount will be applied to the sum of the Subtotal + the Shipping Rate.
- **Discard subsequent rules** - enable this option to stop the rules with lower priority when the rule with this setting is activated.

To help you understand the nuances of **Calculate Discount Based On** functionality, here is a detailed description of how the calculation will be made in the case of each selected option.

Calculate Discount Based On   Price (Special Price if Set)

Price (Special Price if Set)
Price after Previous Discount(s)
Original Price, Calculate before Special Price (if present)
Original Price, Apply to Original Price (skip if result is more than Special Price)

Use General Skip Settings

Price (Special Price is Set) - the calculation will be based on the special price, that was set in the product settings.

Price After Previous Discount(s) - the calculation will be based on the price configured after the previous discount(s) is applied.

Original Price, Calculate before Special Price (if present) - the calculation will be based on the price before any changes are applied.
Original Price, Apply to Original Price (skip if result is more than special price) - the algorithm compares Special Price with Final Price after discount and chooses the value you need depending on module configuration. This option is helpful when it is required to limit discounts in case discounts from several sources apply to the same item. This way, you don't need to check each and every possible discount source for overlaps and don't spend excessive amounts of money on promo discounts.
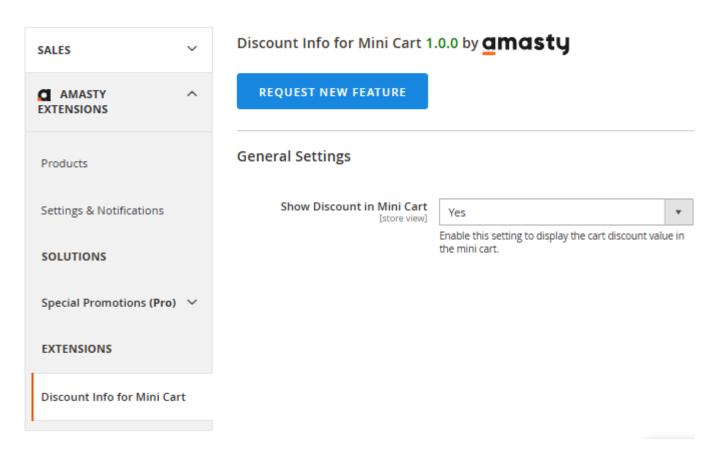

Special Promotions extension supports **Multishipping** option to allow your customers to send products with discounts to several different addresses. The cost of items with applied cart price rules remains the same.

Discount Info for Mini Cart

Go to Amasty > Special Promotions > Configuration > Discount Info for Mini Cart

Show Discount in Mini Cart - click "Yes" to enable the displaying of Cart discounts in the Mini cart (Note: the compatibility is available as a part of an active product subscription or support subscription).

Popular
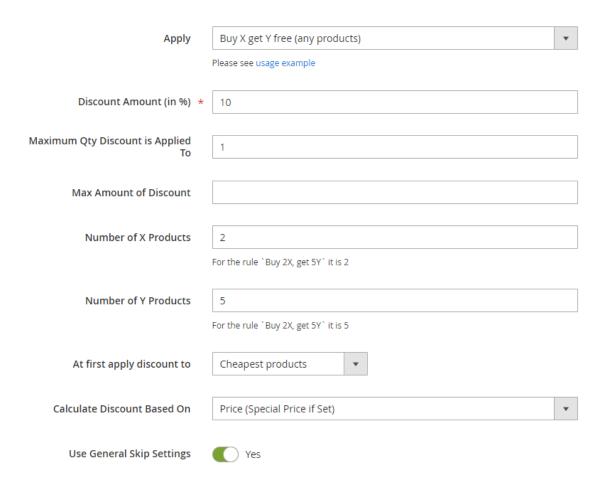

Buy X get Y free (any products)

The 'Buy X get Y free (any products)' is designed to set the number of products that the customer will receive at a discount by applying the rule once.

Let's have a look how to configure the settings for this action.

Actions

Apply	Buy X get Y free (any products) ▼
	Please see usage example
Discount Amount (in %) *	10
Maximum Qty Discount is Applied To	1
Max Amount of Discount	
Number of X Products	2
	For the rule `Buy 2X, get 5Y` it is 2
Number of Y Products	5
	For the rule `Buy 2X, get 5Y` it is 5
At first apply discount to	Cheapest products ▼
Calculate Discount Based On	Price (Special Price if Set) ▼
Use General Skip Settings	◯ Yes

You can set the same product for X and Y values.

The rule is set to give 10% discount for 5 cheapest products in the cart. And here's the result:

Shopping Cart

| Item		Price	Qty	Subtotal
	Crown Summit Backpack	$38.00	2	$76.00
	Savvy Shoulder Tote	$24.00	5	$120.00

Update Shopping Cart

Summary

Estimate Shipping and Tax ⌄

Subtotal	$196.00
Discount ⌃	-$12.00
Buy X get Y free (any products)	-$12.00
Tax	$0.00

Order Total $184.00

Check Out with Multiple Addresses

Percent Discount: The Cheapest, also for Buy 1 get 1 free

The Cheapest action is designed to apply a discount based on the price of cheapest products in the shopping cart.

This rule is set up to give 10% discount on the cheapest product in the cart.

Let's have a look how to configure the settings for this action.

Actions ✎

Apply   `Percent Discount: The Cheapest, also for Buy 1 get 1 free` ▼

Please see usage example

Discount Amount (in %) *   `10`

Maximum Qty Discount is Applied To   `1` ❓

Max Amount of Discount   ` `

Discount Qty Step (Buy X)   `1`

Calculate Discount Based On   `Price (Special Price if Set)` ▼

Use General Skip Settings   🟢 Yes

Skip Items with:
```
Special Price (incl. Catalog Price Rules)
Tier Price
Cart Price Rules Discount
Configurable when Child has Special Price
```

Apply to Shipping Amount   ⚪ No

Discount amount is applied to subtotal only

Discard subsequent rules   ⚪ No

Apply the rule only to cart items matching the following conditions (leave blank for all items).

If **ALL** of these conditions are **TRUE** :

    ⊕

Free Shipping   `-- Please Select --` ▼

Discount Amount (in %) - set here the amount of the discount(%) you would like to give. In our case, it's 10%.

Maximum Qty Discount is Applied To - here, we set the maximum number of items to which the discount can be applied. For example, if your promotion is set to apply a discount on 1 cheapest product in the cart and you set this setting to '1', the discount will be applied only once. If you want to get a discount to 2 cheapest products in the cart - set this option to '2'. In our case, we set 1.

Please, make sure the value is more than zero. Otherwise, the whole order will have a 100% discount after coupon application.

Max Amount of Discount - set the maximum discount amount that can be applied to one rule. It means that no matter how you configured the previous settings, the final discount cannot be more than you specify here. In our case, we'll not set any limitations.

Discount Qty Step (Buy X) - here you specify a step by which a discount will be iterated. For example, if you set '2', the discount will be applied for every second product in the cart: 2, 4, 6, etc. In our case, we need to set '1'.

Calculate Discount Based On - this setting controls how the discount value is calculated.

Use General Skip Settings - if enabled, general Skip settings will be apply to created rule.

Skip Items with - choose needed option from the list to skip products with *Special Price (incl. Catalog Price Rules), Tier Price, Cart Price Rules Discount or Configurable when Child has Special Price* while creating the rule.

When selecting the *Skip Items with: Cart Price Rules Discount* option, if another rule is used, all linked products will be considered as single items and skipped. Thus, the discount will only apply to items that were not used in the rule before (neither as a condition for applying the rule, nor as a discount item).

**Apply to Shipping Amount** - enabled this option only if you want to apply the discount to the sum of the Subtotal + the Shipping Rate. We don't need this for our promotions, so we set to 'No'.

Discard subsequent rules - enable this option to stop other rules with lower priorities if this rule is applied. We don't need this for our promotions, so we set to 'No'.

Let's see the rule in action.

Example rule setup

Shopping Cart

The cheapest product, in this case, is 'Argus All-Weather Tank' which is priced at $22.00. The discount amount is $2.20 which is exactly 10% of $22.00. Spot on!

Fixed Price: The Cheapest, also for Buy 1 get 1 free

This action works exactly the same as **Percent Discount: The Cheapest, also for Buy 1 get 1 free** above, but it will set a fixed price for **Product Y** instead of a percent discount.

The Most Expensive
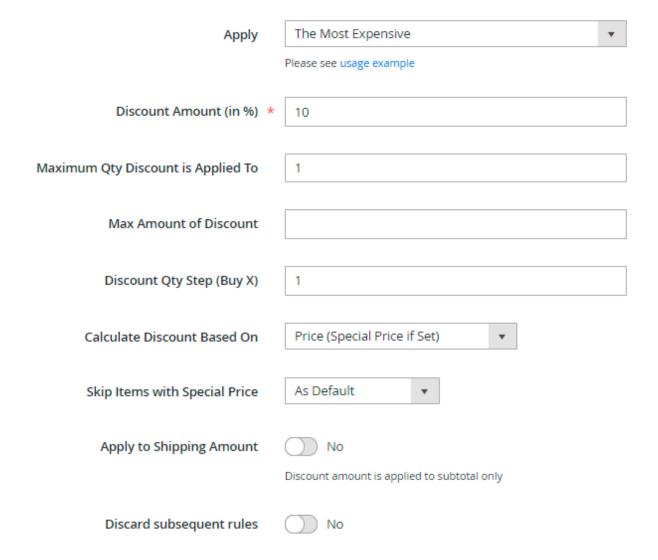

The Most Expensive action works just the same as **The Cheapest**, but instead of calculating discount based on cheapest product, it checks the price of most expensive product instead.

Sample rule setup

Actions ✏

Apply	The Most Expensive ▾
	Please see usage example
Discount Amount (in %) *	10
Maximum Qty Discount is Applied To	1
Max Amount of Discount	
Discount Qty Step (Buy X)	1
Calculate Discount Based On	Price (Special Price if Set) ▾
Skip Items with Special Price	As Default ▾
Apply to Shipping Amount	◯ No
	Discount amount is applied to subtotal only
Discard subsequent rules	◯ No
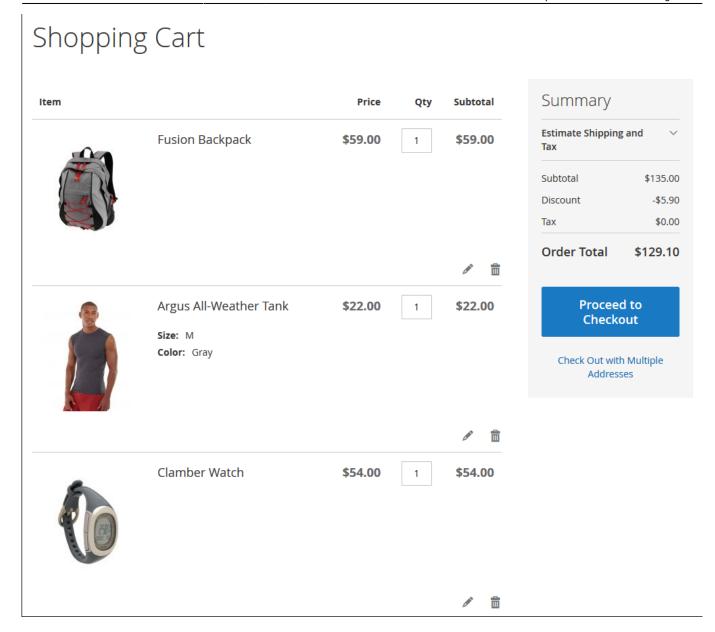

Please, make sure the **'Maximum Qty Discount is Applied To'** value is more than zero. Otherwise, the whole order will have a 100% discount after coupon application.

The rule is set to give 10% discount on most expensive product. And here's the result

Shopping Cart

'Fusion Backpack' is the most expensive product in this case priced at $59.00. 10% of that value will be $5.90, and looking at Discount value we see a match.

Get $Y for each $X spent

With this action you can configure promotions like 'Get $10 off every $300 in the cart'.

Sample rule
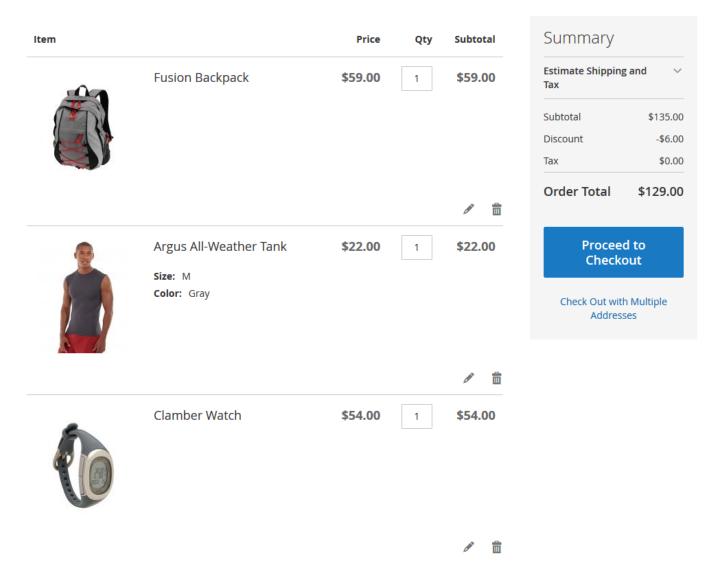

Actions ✎

Apply	Get $Y for each $X spent ▾
	Please see usage example
Discount Amount *	1
Maximum Qty Discount is Applied To	0
Max Amount of Discount	
Discount Qty Step (Buy X)	20
Calculate Discount Based On	Price (Special Price if Set) ▾
Skip Items with Special Price	As Default ▾
Apply to Shipping Amount	◯ No
	Discount amount is applied to subtotal only
Discard subsequent rules	◯ No

This rule is set to give $1 every $20 spent. This it how it looks in action

Shopping Cart

Item		Price	Qty	Subtotal
	Fusion Backpack	$59.00	1	$59.00
	Argus All-Weather Tank **Size:** M **Color:** Gray	$22.00	1	$22.00
	Clamber Watch	$54.00	1	$54.00

Subtotal	$135.00
Discount	-$6.00
Tax	$0.00

Order Total   **$129.00**

Proceed to Checkout

Check Out with Multiple Addresses

Subtotal value is $135.00. Our discount should apply 6 times (135/20=6.75, rounding to the lower value) and give $6 discount. Which it does!

Buy X Get Y (X and Y are different products)

This rule group can be used when you want to give a discount on certain product or selection of products, but only if there is specific, different, product present in the cart. Example promotion: 'Buy White Shirt and get Red Bow-tie with 15% discount'.

Percent Discount: Buy X get Y Free

Let's set up a rule like **'Buy Pushup Grips and get fitness video with 15% discount'**. This is how the rule might look like

Apply	Percent Discount: Buy X get Y Free ▼

Please see usage example

Discount Amount (in %) *	15
Maximum Qty Discount is Applied To	0
Max Amount of Discount	
Number of X Products	1

For the rule `Buy 2X, get 5Y` it is 2

Number of Y Products	1

For the rule `Buy 2X, get 5Y` it is 5

Calculate Discount Based On	Price (Special Price if Set) ▼
Skip Items with Special Price	As Default ▼
Apply to Shipping Amount	◯ No

Discount amount is applied to subtotal only

Discard subsequent rules	◯ No

Define X product (leave blank for any product)

If **ALL** of these conditions are **TRUE** :

⊕

Free Shipping	-- Please Select -- ▼

Define Y product (X and Y are different products)

Promo Categories	

Comma separated list of the category ids

Promo SKU	240-LV05

Comma separated list of the SKUs

amasty

This one requires some explanation.

Promo Categories and **Promo SKU** sections is where you define the Y product in **Buy X get Y** formula. Product X is defined in condition tree at the bottom. So you can use any attribute as condition for Product X, but Product Y can be defined only by SKU or category.

Also please note **Number of X Products** and **Number of Y Products** fields. In my example we have 'one for one' logic, but if you want to, for example, give discount like **Buy 5 X and get 2 Y** then 'Number of X Products' should be set to '5' and 'Number of Y Products' to '2'.

But let's see how our rule works now

Shopping Cart

Item		Price	Qty	Subtotal
LifeLong Fitness IV Downloads: LifeLong Fitness IV		$14.00	1	$14.00
Go-Get'r Pushup Grips		$19.00	1	$19.00

Summary

Estimate Shipping and Tax

Subtotal	$33.00
Discount	-$2.10
Tax	$0.00

Order Total **$30.90**

**Proceed to Checkout**

Check Out with Multiple Addresses

The discount amount is $2.10 which is exactly 15% of $14 for our fitness video.

Please note that due to certain limitations of Magento 2 logic, it is required to set up at least one condition in the **Define X product** configurations section.

Define X product (leave blank for any product)

If **ALL** of these conditions are **TRUE** :

In case the mentioned above configuration is left blank, you'll get a validation error notification.

Fixed Discount: Buy X get Y with $10 Off

This action works exactly the same as **Percent Discount: Buy X get Y Free** above, but it will give fixed amount of discount instead of percent discount.

Fixed Price: Buy X get Y for $9.99

This action works exactly the same as **Percent Discount: Buy X get Y Free** above, but it will set fixed price for **Product Y** instead of percent discount.

Multiple Tiered Discount

With the actions from this section, you can organize multiple tiered discounts for the shopping cart with ease - motivate your customers to spend more for getting bigger discounts.

For Each $X Spent, get Whole Cart N% Cheaper

Actions ✎

Apply	For Each $X Spent, get Whole Cart N% Cheaper ▾

Please see usage example

Discount Amount Step (... whole Cart 5$ Cheaper), in % *	5
Max Amount of Discount	
Cost Step (For Each 100$ Spent ...), in $	100
Calculate Discount Based On	Original Price, Apply to Original Price (skip if result is more than Special Price) ▾
Use General Skip Settings	🟢 Yes
Skip Items with:	Special Price (incl. Catalog Price Rules) Tier Price Cart Price Rules Discount Configurable when Child has Special Price
Apply to Shipping Amount	⚪ No

Please note that the setting will be removed in the next release. Kindly review and adjust your configuration accordingly.

Discard subsequent rules	🟢 Yes

Discount Amount Step (... whole Cart 5$ Cheaper), in % - Sets the discount amount for the entire basket as a percentage for each step.

Cost Step (For Each 100$ Spent ...), in $ - Sets the step of the total cost of products in the cart, after which the next discount percentage is calculated.

Max Amount of Discount - Sets the threshold for the maximum possible discount.

Calculate Discount Based On - Here you can choose from what type of price the discount will be calculated.

Skip Items with Special Price - Specify whether to apply or not the discount to the products with special price.

Apply to Shipping Amount - Set to 'Yes' if you want to apply the rule to the shipping amount.

Discard subsequent rules - Move the toggle to 'Yes' to discard the subsequent rules if needed.

Let's see how the rule works on the storefront.

The Cart subtotal is $270, and the 10% discount from $270 is $27.

For Each 10$ Spent on X, get Y 5% Cheaper

Actions

Apply	For Each 10$ Spent on X, get Y 5% Cheaper ▾
	Please see usage example
Discount Amount Step (... get Y 5$ Cheaper), in % *	5
Max Amount of Discount	
Cost Step (For Each 10$ Spent on X...), in $	100
Calculate Discount Based On	Original Price, Apply to Special Price (if present) ▾
Skip Items with Special Price	As Default ▾
Apply to Shipping Amount	◯ No
	Discount amount is applied to subtotal only
Discard subsequent rules	◯ No

Define X product

If **ALL** of these conditions are **TRUE** :
  Attribute Set **is** Bottom 🔴
    ⊕

Free Shipping	No ▾

Define Y product (X and Y are different products not in the same category)

Promo SKU	
	Comma separated list of the SKUs. Simple products supported only.
Promo Categories	4,6
	Comma separated list of the category ids

Discount Amount Step (... get Y 5$ Cheaper), in % - Sets the discount percentage for each step.

Cost Step (For Each 10$ Spent on X...), in $ - Sets the step of the total cost of products X in the cart, after which the next discount percentage is calculated.

Max Amount of Discount - Sets the threshold for the maximum possible discount.

Calculate Discount Based On - Here you can choose from what type of price the discount will be calculated.
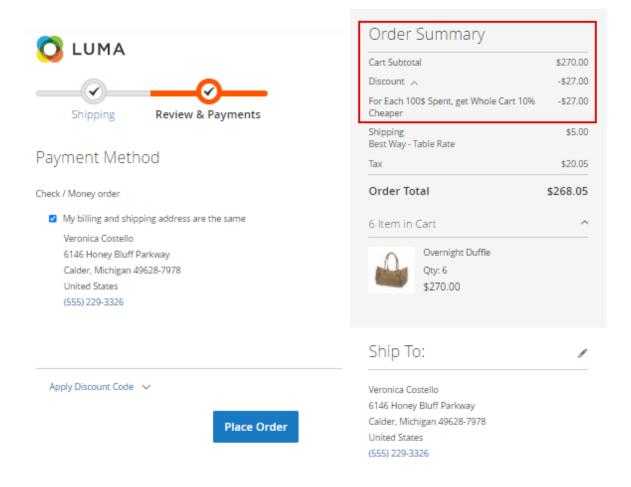

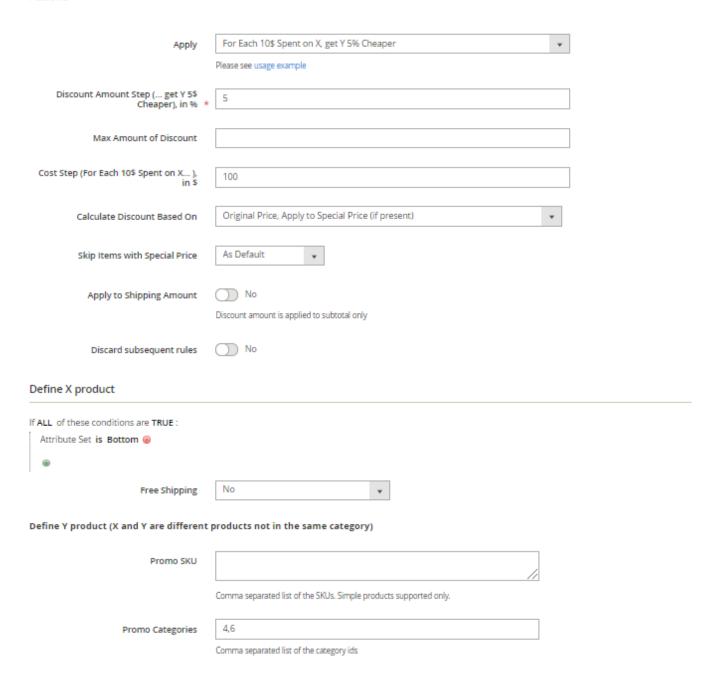

Skip Items with Special Price - Specify whether to apply or not the discount to the products with a special price.

amasty

Apply to Shipping Amount - Set to 'Yes' if you want to apply the rule to the shipping amount.
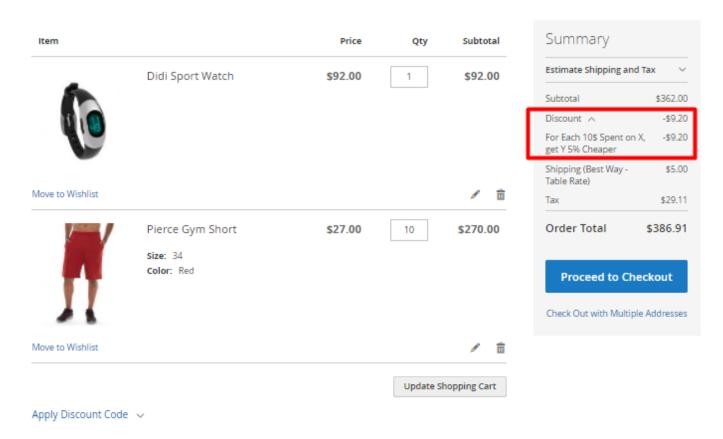

Discard subsequent rules - Move the toggle to 'Yes' to discard the subsequent rules if needed.

Define X product and **Define Y product** - These settings can be configured the same way as it was described above for the **Buy X Get Y** action.

To save the rule with this action you should fill in the data both for X product and Y product. Otherwise, the action will not be saved.
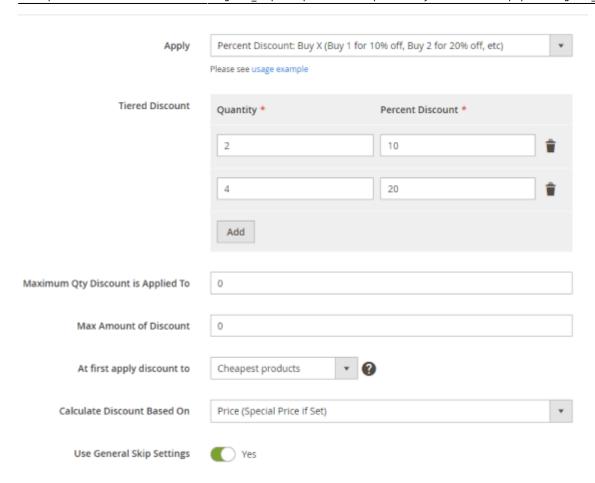

Let's see how the rule works on the storefront.

Percent Discount: Buy X (Buy 1 for 10% off, Buy 2 for 20% off, etc)

With this action you can set up dynamic type of discount which depends on the quantity of purchased items. For example, Buy 2 products get 10% discount, buy 3 products - get 15% discount, buy 5 products and get 30% discount.

Tiered Discount - Fill in the rows to specify the quantities of products and the size of discount that will be applied.

Quantity - Specify the quantity of items that will be subject to the discount.

Percent Discount - Specify the amount of discount for particular quantity of items.
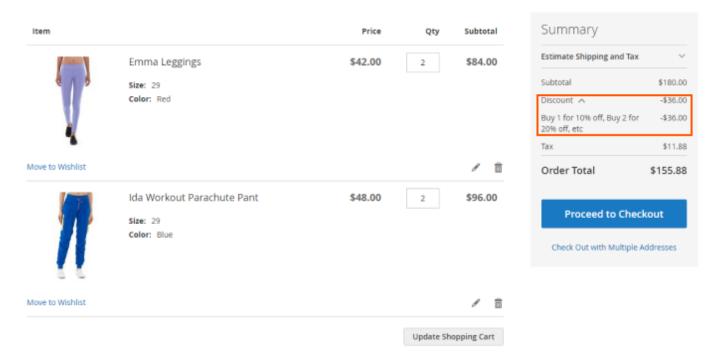

Click **Add** to create more discount options.

Click on the Trash Button to delete the row.

Let's see how the rule works on the storefront.

The Cart subtotal is $180. In total, we have 4 items in the cart. According to our conditions, the discount for the 4th position is 20%, and the 20% discount from $180 is $36.

Each N-th
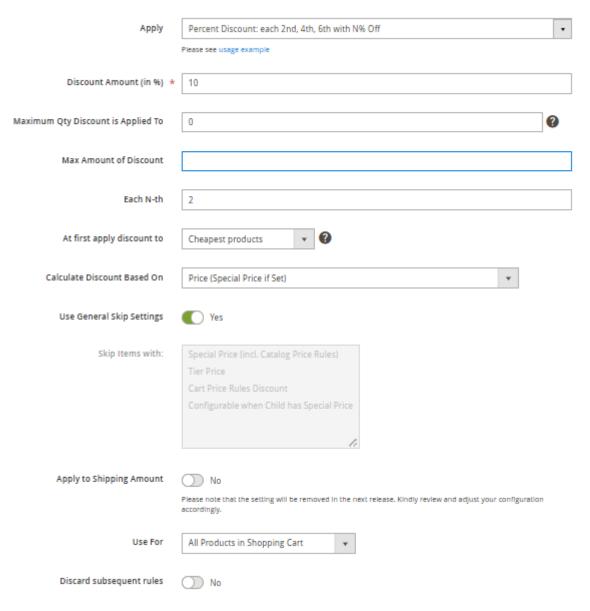

This action can be used in promotions like **Get 20% off each 5-th product in the cart**.

The action applies the discount for each N-th item in the cart.

Percent Discount: each 2-d, 4-th, 6-th with N% Off

Let's set up a rule **Get 10% off each second item in the cart**. The rule will look like this

|	
Apply	Percent Discount: each 2nd, 4th, 6th with N% Off ▾
	Please see **usage example**
Discount Amount (in %) *	10

Tax	$25.39
Order Total	**$363.19**

Proceed to Checkout

Check Out with Multiple Addresses

Note, that the discount will be applied to each second item in the cart - the **Use For** field is set to **All Products in Shopping Cart**. We have 6 Eos V-Neck Hoodies in the cart. 6/2=3, so we can apply the discount to three Eos V-Neck Hoodie items. Price of 1 item is $54, 10% of $19 will be $5.4. Multiply $5.4 by 3 and we get **$16.2 total discount**. Match!

Fixed Discount: each 3-d, 6-th, 9-th with $X Off

This action works exactly the same as **Percent Discount: each 2-d, 4-th, 6-th with X% Off** above, but it will give fixed amount of discount instead of percent discount.
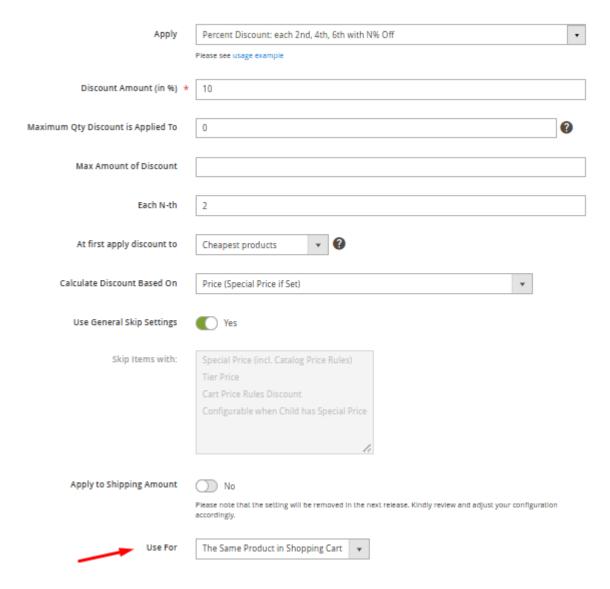

Fixed Price: each 5th, 10th, 15th for $X

This action works exactly the same as **Fixed Discount: each 3-d, 6-th, 9-th with $X Off** above, but it will give a fixed price for each N-th product instead of a fixed amount of discount.

Set up the **At first apply discount to** setting to sort the products, to which the rule is applied, starting from the cheapest or the most expensive ones. When it is set to **Cheapest products**, then

the discount will be applied to the cheapest products first.

The examples above illustrate the ability to apply discounts to all products in the cart. At the same time, the extension allows you to tune the group of "Each N-th" actions so that discounts will be applied only to identical products in the cart. For instance, you're going to run the promotion "Get each second same product with 10% discount". To set up the action, fill in the fields as illustrated below:

|	
Apply	Percent Discount: each 2nd, 4th, 6th with N% Off ▼

Use For	The Same Product in Shopping Cart ▼

The field, which controls the application of discounts to the same products – the **Use For** field – should be set to **The Same Product in Shopping Cart**.

See, how it works.

Shopping Cart

At first discount will be applied to the second item of Affirm Water Bottle and will constitute $0.7. Then, the discount will be applied to each second item of Pursuit Lumaflex™ Tone Band products. The discount amount equals to $4,8 (3 * $1,6 = $4.8). To the Luma Yoga For Life product, the discount won't be applied as the cart contains only one item of a kind. The total discount amount is $5.50.
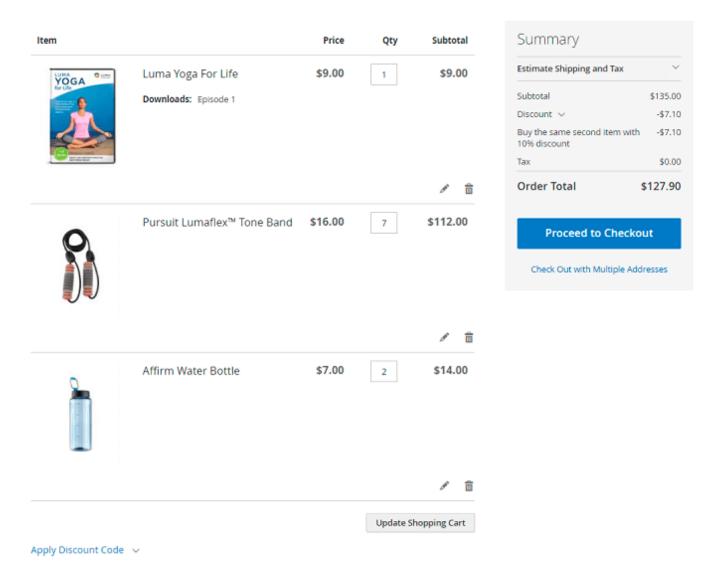

Let's compare the result with the one we can obtain by applying the discount for all products in the cart.

Note! Keep in mind that for this case the **Use For** field should be set to **All Products in Shopping Cart**. Also pay attention to the **At first apply discount to** field: according to the example, the discount will be applied to the most expensive products in the cart first.

For the products we've chosen in the previous example, discount amount will constitute $7.10 ($0,7 + $1,6 * 4 = $7.10):

Shopping Cart

Item		Price	Qty	Subtotal
	Luma Yoga For Life **Downloads:** Episode 1	$9.00	1	$9.00
	Pursuit Lumaflex™ Tone Band	$16.00	7	$112.00
	Affirm Water Bottle	$7.00	2	$14.00

Now it's time for you to decide which of the ways of discount application meets your business strategy.

Each Product After N

This action can be used in promotions like **10% off on all products after fifth one!**

The trick with this action is that you can give discount not only on all products after certain threshold is reached, but you can set the rule to give discount for each second, third, and so forth instead.

This is what **Each Product (step)** and **After N** setting control.

For example, we've set **After N** to '3' (as we wanted to discount items after the third one) and **Each Product (step)** to '2' (to give discount for each second item). How the rule will be applied in this case you can see from the diagram below:

---

amasty

But that is not all. To better understand how the calculation logic works, below you can find step-by-step explanation:

1. From total quantity of products in the cart value set in **After N** setting is subtracted.
2. Result of previous operation then divided by the value from **Each Product (step)**.
3. Then all products in the cart are sorted by price, from lowest price to highest.
4. Discount will be applied to products with lowest price after the third one (according to the **After N** setting, the 1st, the 2nd and the 3rd products are ignored).

Example of the above. Let's say we've set **After N** to '3', **Each Product (step)** is set to '2' and in the cart we have products priced $10, $20, $30, $40, $50 and $60. And we want to give 10% discount. So let's work the steps:
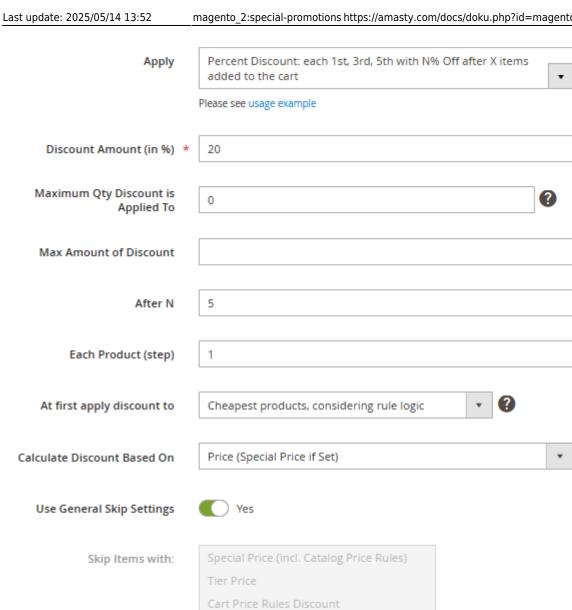

1. Total qty is '6', **After N** is '3'. 6-3=3.
2. **Each Product (step)** is '2', so 3/2=1.5, rounding to bigger value and getting *2*. Then we're going to apply discount on **two products**.
3. After sorting the products we have this array: $10, $20, $30, $40, $50, $60
4. $40 and $50 products are the cheapest in this case, as the first three items are ignored. 10% of $40 is $4 and 10% of $50 is $5. 4+5=9. Quick math. So the resulting discount will be $9.

Percent Discount: each 1st, 3rd, 5th with N% 0ff after 5 items added to the cart

Get 20% off any product after the fifth one in the cart sounds like a nice enough promotion, let's try it.

Here's how the rule might look like in this case

Apply

Percent Discount: each 1st, 3rd, 5th with N% Off after X items added to the cart ▾

Order Total   **$138.40**

Proceed to Checkout

Check Out with Multiple Addresses

If you've checked the explanation on action login above then you can calculate the result yourself. Otherwise this is how the result was achieved:

1. Total qty is '7', **After N** is '5'. 7-5=2.
2. **Each Product (step)** is '1', so 2/1=2. Then we're going to apply discount on **two products**.
3. After sorting the products we have this array: $14, $19, $19, $19, $19, $19, $36
4. According to the **After N** rule, the first five items are ignored, so the discount will be applied to $19 and $36 products. 20% of $19 is $3.80 and 20% of $36 is $7.20. 3.8+7.2=11. So the resulting discount will be $11. Exact match!

Fixed Discount: each 3d, 7th, 11th with $X 0ff after Y items added to the cart

This action works exactly the same as **Percent Discount: each 1st, 3rd, 5th with 15% 0ff after 5 items added to the cart** above, but it will give fixed amount of discount instead of percent discount.
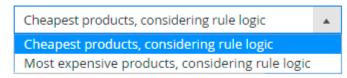

Fixed Price: each 5th, 7th, 9th for $89.99 after 5 items added to the cart

This action works exactly the same as **Fixed Discount: each 3d, 7th, 11th with $15 0ff after 5 items added to the cart** above, but it will set a fixed price for the product instead of a fixed amount of discount.

Keep in mind, that you can choose to which products, matching the rule conditions, discounts should be applied first:

At first apply discount to	Cheapest products, considering rule logic ▲
	Cheapest products, considering rule logic
	Most expensive products, considering rule logic

Each Group of N

Get 5 shirts for $200 promotion is an example of how this action can be used.

The logic behind this action is quite simple:

1. **Discount Amount** is a price for the group of items
2. **Discount Qty Step (Buy X)** value determines how many products will be in one group.
3. **Max Amount of Discount** - the max. discount amount that can be got with the rule.
4. Products in the cart are sorted by the price, from lowest to highest.
5. Products in the cart are divided into groups and each group has a discount applied individually.

Example can be seen below.

Fixed Price: Each 5 items for $50

The example #1

Let's try making simple rule without product restrictions
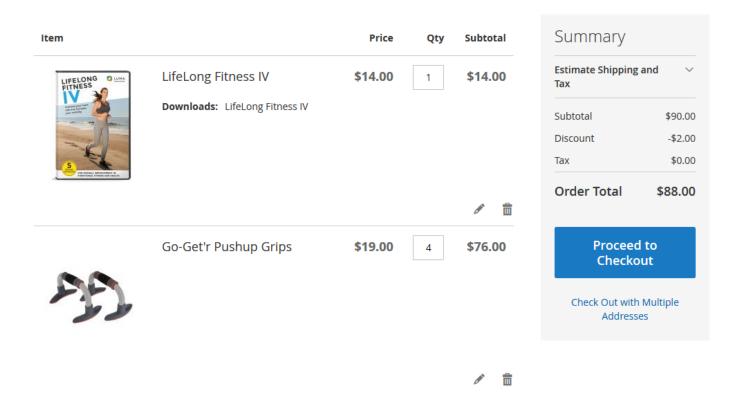

Actions ✏

Apply	Fixed Price: Each 5 items for $50 ▾
	Please, change the priority of this rule to 0. If more than one rule has priority 0, the discount can be calculated incorrectly
	Please see usage example
Discount Amount *	50
Max Amount of Discount	
Discount Qty Step (Buy X)	3
At first apply discount to	Cheapest products ▾
Skip Items with Special Price	As Default ▾
Discard subsequent rules	⬤ No

This rule is set to apply fixed price of $50 for group of three products. Any products, no restrictions. But if you want to limit the products which will be used in calculation and hence have discount applied, please use conditions tree in Actions tab to define these products.

Checking the result...

Shopping Cart

Item		Price	Qty	Subtotal
LifeLong Fitness IV **Downloads:** LifeLong Fitness IV		$14.00	1	$14.00
Go-Get'r Pushup Grips		$19.00	4	$76.00

Summary

Estimate Shipping and Tax ⌄

Subtotal	$90.00
Discount	-$2.00
Tax	$0.00
Order Total	**$88.00**

Proceed to Checkout

Check Out with Multiple Addresses

Some explanation is required here. Let's work the logic steps:

1. **Discount Qty Step (Buy X)** is set to '3'. We have 5 products in the cart so discount will be applied only once.
2. After sorting products in the cart by the price we have this array: $14, $19, $19, $19, $19
3. $14, $19, and $19 products are the cheapest three in the cart, so the discount will be applied to them.

Calculations: 14+19+19=52. **$52 is the original price** of these three products. But we've set to give a fixed price of $50 for a group. So the total discount will be **$52-$50=$2**. Looks like exactly what we have in Discount line.
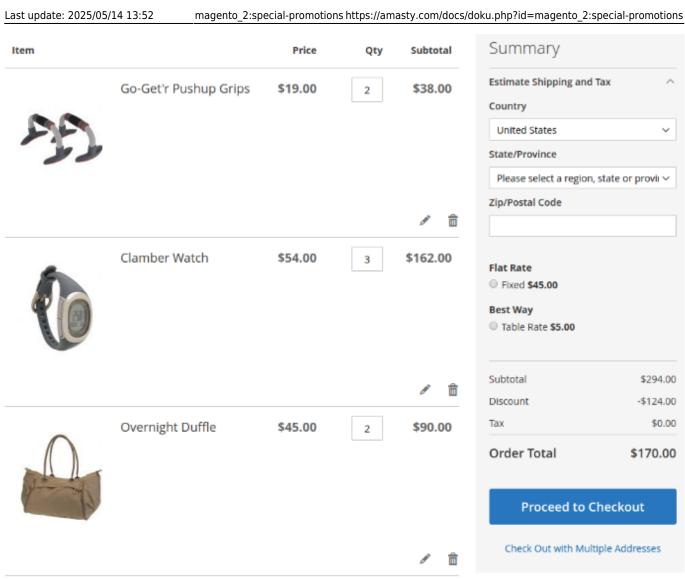

The example #2

Actions ✎

Apply	Fixed Price: Each 5 items for $50 ▾

Please, change the priority of this rule to 0. If more than one rule has priority 0, the discount can be calculated incorrectly
Please see usage example

Discount Amount *	30
Max Amount of Discount	
Discount Qty Step (Buy X)	3
At first apply discount to	Cheapest products ▾
Skip Items with Special Price	As Default ▾
Discard subsequent rules	⊘ No

According to the rule, the groups will be formed of 3 items and the price for each set will be $30.

All the items in the cart are sorted by the price, thus, we have the following array: 2 2 19 19 45 45 54 54 54

Item		Price	Qty	Subtotal
	Go-Get'r Pushup Grips	$19.00	2	$38.00
	Clamber Watch	$54.00	3	$162.00
	Overnight Duffle	$45.00	2	$90.00

Discount	-$124.00
Tax	$0.00
Order Total	**$170.00**

Proceed to Checkout

Check Out with Multiple Addresses

The extension selects first 3 items. Their sum (23) is less than the price for the group in the rule (30). Thus, the first element is skipped and the extension selects the next 3 elements, started with the second element: 2+19+19 = 40. The sum is bigger than the price for the group in the rule (30), so the discount will be the following: 40 – 30 = 10

As the rule doesn't have any discount limits, the extension continues forming the groups for the discount.

The next group is 45 45 54. The sum(45+45+54 = 144) is bigger than the price for the group (30), so the discount is 144 - 30 = 114

The next group is 54 54. The number of items is less than it should be for making up the group, so the extension doesn't calculate the discount.

The final discount is 10+114=124

Percent Discount: Each X items with N% off

This action works the same as **Fixed Price: Each 5 items for $50** but instead of giving the fixed price for a group of products, it applies a percent discount to them.

Each group of N actions also provide you with the possibility to apply discounts to the products, placed from the cheapest to the most expensive ones or backward. To use the option, set up the **At first apply discount to** setting according to your needs.

Product Set

This action can be used in promotions like **Buy shirt, pants and shoes just for $100** and alike.

Let's have a look what does the settings mean for this action.

Discount Amount - product set's price

Max Number of Sets Discount Applied To - the max number of sets that can be gathered by the rule. (If you leave this field empty the number of sets is unlimited.)

Max Amount of Discount - the max discount amount that can be applied. (the discount for the set is the difference between the sum of all products' prices in the set and the price for the set)|

Promo SKU - here you put down the SKUs of the products that make up the set.

Percent discount for product set

As an example, I will set a promotion, where I give 50% discount for a purchase of a combination of Pushup Grips, Watch, and fitness video. Here's my rule
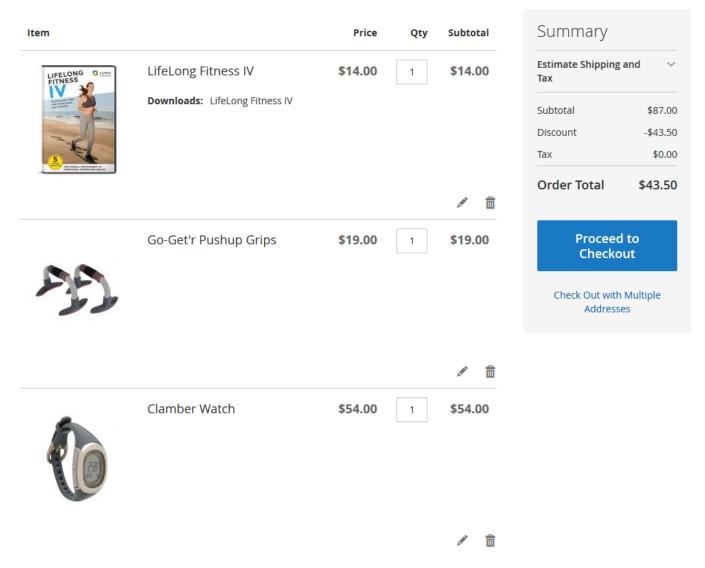

Actions ✏️

Apply

Percent discount for product set ▼

WARNING: 'Product set' rules always have the highest prioity. If you have many rules and they work simultaneously, 'Product set' rule is applied before any other one. If you have multiple 'Product set' rules, they will be applied according to their priorities (still before all the other types of rules).

Check Out with Multiple Addresses

In this example, the products Go-Get'r Pushup Grips, Clamber Watch, Antonia Racer Tank can be made up as a set for $20 (watch the rule with 0 priority).

In the example, there are 2 or more promo items in the cart, so 2 sets can be created.

The discount for this set will be the following: (38+108+4) – 2*20 = 110

2 of 3 Clamber Watches was got into the first set. But the remaining Clamber Watch item can be grouped in another set for $30(watch the set with the priority 1).
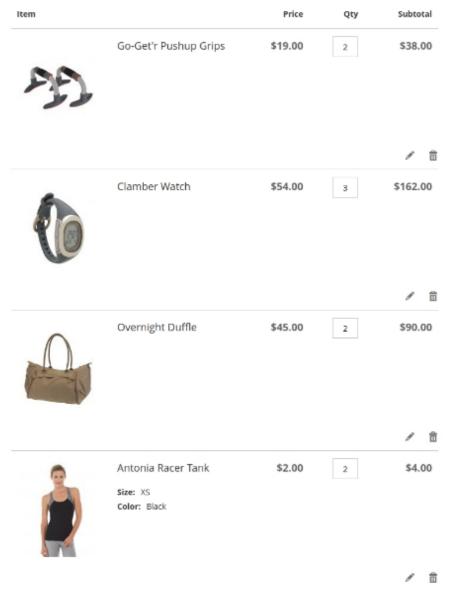

The discount for this set: (54+45) – 30= 69
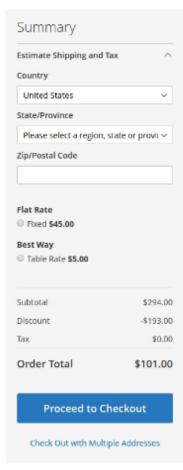

The discount for 3 sets: 69+110 = 179

The subtotal: 294 – 179 = 115

The example #3

Now let's change the priorities of the rules from the example #2.

Item	Price	Qty	Subtotal
Go-Get'r Pushup Grips	$19.00	2	$38.00
Clamber Watch	$54.00	3	$162.00
Overnight Duffle	$45.00	2	$90.00
Antonia Racer Tank Size: XS Color: Black	$2.00	2	$4.00

Check Out with Multiple Addresses

Clamber Watch и Overnight Duffle are grouped in a set for $30 with the rule's priority 0. As there are 2 Clamber Watch and 2 Overnight Duffle items in the cart, we can create 2 sets.

Thus, the discount is: (54*2+45*2) – 30*2 = 138

After the first set was grouped, only 1 Clamber Watch item left. Therefore, for the rule with the priority 1 only one set for $20 can be created.
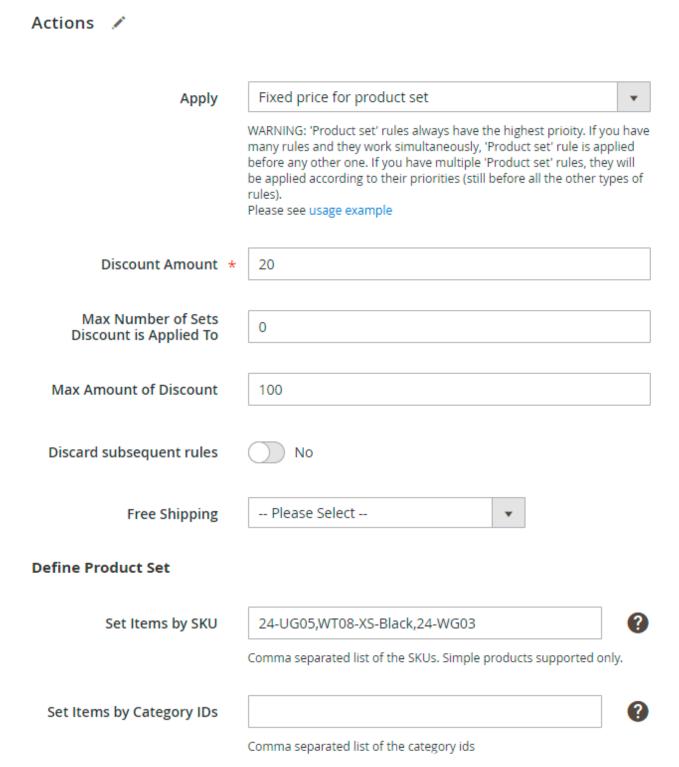

The discount: (19+54+2) – 20 = 55

The final discount for 3 sets: 138+55 = 193

The subtotal: 294 – 193 = 101

**The example #4 The rule with the specified max.amount of discount**

WARNING: 'Product set' rules always have the highest prioity. If you have many rules and they work simultaneously, 'Product set' rule is applied before any other one. If you have multiple 'Product set' rules, they will be applied according to their priorities (still before all the other types of rules).

As we have 2 of each promo items in the cart, 2 sets for $20 can be grouped.

But according to the rule, we have a restriction on the max.number of sets that can be formed (1), so in this case, the discount will be applied just for 1 set.

The discount will be the following: (19+54+2) – 20 = 55

The subtotal: 294-55=239
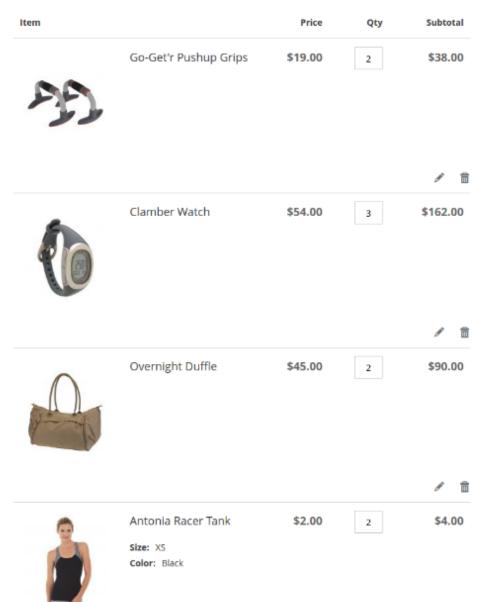

The example #6 The rule with the specified max. amount of discount and specified max. number of sets

The discount is: (19+54+2) – 20 = 55

But according to the rule, we have a restriction on the max. number of sets that can be formed (1), so in this case, the discount will be applied just for 1 set.
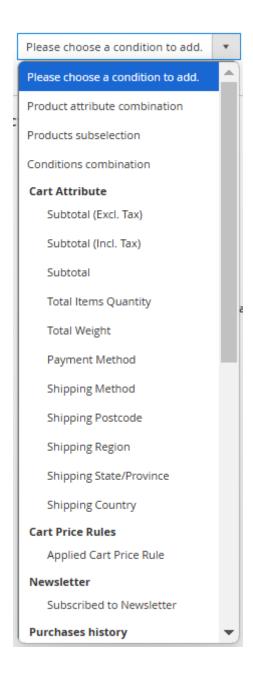

Also, we have a restriction on the max. discount amount for the set ($30), so in this case, the maximum discount that can be applied is $30.

The final discount is: 294 – 30 = 264
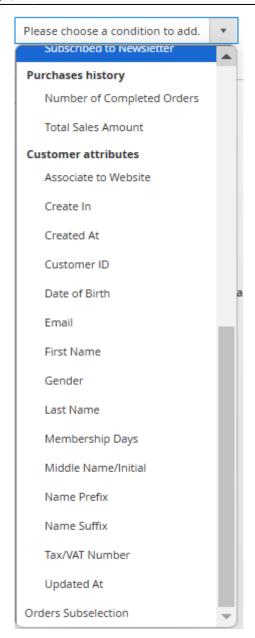

The subtotal is: 294 - 30 = 264

Special Promotions Pro for Magento 2 specific features

Special Promotions Pro for Magento 2 expands **Special Promotions for Magento 2** capabilities by introducing a set of conditions that check customers' purchase history and account details.

- **Cart Price Rules - Applied Cart Price Rule** will establish dependencies between rules.
- **Newsletter - Subscribed to Newsletter** will establish the configuration of rules based on the newsletter subscription status of registered customers (Note: the functionality is available as a part of an active product subscription or support subscription).
- **Purchases History - Total Sales Amount** will sum up totals of completed orders placed by the same customer and compare the results with the value defined in condition.
- **Customer Attributes** condition group will check the values of attributes saved in the customer's account.
- **Orders subselection** is very similar to **Number of Completed Orders** and **Total Sales Amount** but allows to define orders statuses and order dates which will be checked, instead of checking all orders with Complete status only as for the conditions above.

For instance, if you have *two* cart price rules and want to enable the application of the *second rule* only when the *first rule* is (not) already applied. Please note that the specific cart items required by the conditions of the *second rule* must present in the cart for the *second rule* to be applied correctly. If those conditions are not met, the *second rule* will not be applied, even if the *first rule* has already been applied.

Also, it is important to properly set rules' priorities. If the dependent rule has a higher priority than the parent rule, the logic of the **Applied Cart Price Rule** condition won't work as expected. When the rules have the same priority, the rule with the earlier creation date will be applied first.
WARNING: **Product set** rules always have the highest priority. If you have many rules and they work simultaneously, **Product set** rule is applied before any other one. If you have multiple **Product set** rules, they will be applied according to their priorities (still before all the other types of rules). Please see usage example.
The functionality of the **Applied Cart Price Rule** condition is only available as part of an active product subscription or Support subscription.
To configure discount rules based on newsletter subscription status:

If **"Subscribed to Newsletter"** is **"Yes"**, the discount applies **only** to registered customers who subscribe to the newsletter. If **"Subscribed to Newsletter"** is **"No"**, the discount applies **only** to registered customers who are **not** subscribed.

Please note that this feature only works for registered customers.
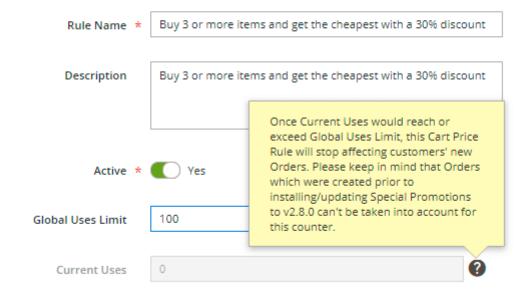

Limit the number of times for a rule being triggered

Now you can set a limit of times your promo rule could be applied by your customers globally in general. Set the limits if you want to grant a discount on first order in Magento 2 store.

For example, you want to organize a *give away with a 50% discount for the first 100 customers* who would use your prom coupon. In order to set such a limitation please navigate to **Marketing → Cart Price Rules** and then **add new rule** or **edit existing**.

Then specify the number of times you want the rule to available to be triggered in the field **'Global Users Limit'**, e.g. 100 times. It means that only 100 customers would be able to buy something in your store with a discount applied for this rule.

After the number on the counter from the field **'Current users'** would exceed the number you've set above, the rule would not be longer applied for all further new users.

Loyalty Program for Magento 2 specific features

Loyalty Program for Magento 2 extension has all the features from both **Special Promotions for Magento 2** and **Special Promotions Pro for Magento 2** modules but also adds a page to a customer account where you can display information about the loyalty program you run on your store with goals, levels and discounts for each level along with the purchase history overview.

Spend $100 or more this month and get 10% discount on all products!

Here's your current stats

You are with us for **0** days

Total:
Number of completed orders is **1**
Average order value is **$53.50**
Order amount is **$53.50**

This Month:
Number of completed orders is **1**
Average order value is **$53.50**
Order amount is **$53.50**

Last Month:
Number of completed orders was **0**
Average order value was **$0.00**
Order amount was **$0.00**

Please note that these settings won't apply any discounts for customers. For this, you have to set up promotion rules using customer purchase history conditions.
To further promote your discounted items, consider offering them as **cross-sells and upsells** on the related product and cart pages.

Special Promotions Pro: Import and Export cart price rules

Please note that the **export/import functionality** is only available as part of an active product subscription or Support subscription. You can find the **amasty/module-special-promo-import-entity** and **amasty/module-special-promo-export-entity** packages for installation in Composer suggest.

To export cart price rules, go to **System → Amasty Export → Export** and select the entity to export.
