For more details see the [Custom Order Number](#) extension page.

Custom Order Number for Magento 2

Implement diverse store documents numbering using prefixes and custom starting numbers. Provide unique order and other related documents numbers to protect business data and motivate customer to purchase more.

- Use custom order numbers for order related documentation
- Add prefixes and postfixes to modify order numbering
- Fit your numbering policy to local jurisdiction requirements
- Hide important business data with the help of increment intervals

General Extension Settings

To configure the extension please go to **Store** → **Configuration** → **Amasty Extensions** → **Order Number** and expand the **General** section.

The screenshot shows the 'Configuration' page for the 'Amasty Order Number' extension. The 'General' section is expanded, showing two settings:

- Enabled:** Set to 'Yes' (dropdown menu). Below it, a note reads: 'Allows to add set of products to any search, but might slow down the pages in some cases'. The label '[STORE VIEW]' is to the right.
- Timezone offset:** Set to '0 hours' (dropdown menu). The label '[STORE VIEW]' is to the right.

A 'Save Config' button is located in the top right corner of the configuration area.

Enabled — enable or disable the extension;

Timezone offset — modify this option to change the default Magento 2 timezone in your order related documents.

Order Data Configuration

To configure order numbering expand the **Order** section.

Order

Number Format	<input type="text" value="ORD-{yy}-{mm}-{dd}-{counter}"/>
	You can use variables {counter}, {store}, {yyyy}, {yy}, {m}, {mm}, {d}, {dd}, {rand}. If you type ORD-{yy}-{mm}-{dd}-{counter} in the field, you will have order numbers of the kind: ORD-13-08-15-000077
Start Counter From	<input type="text" value="18"/>
Counter Increment Step	<input type="text" value="3"/>
	E.g. the last number is 00015. If increment step is 4, the next number will be 00019
Counter Padding	<input type="text" value="7"/>
	Total number of digits in the order number. If the order id is 24 and padding is 6, the result will be 000024. Set to 0 (zero) not to add leading zeros.
Reset Counter on Date Change	<input type="text" value="Never"/>
Reset Counter	<input checked="" type="checkbox"/>
	If you really need to reset current counter value to the starting number, tick the checkbox and click `Save`

Number Format — specify order's number format which will replace the numbers generated by default Magento functionality;

Start Counter From — set the starting numbers for your orders. Say, you have 1349 orders in your store and open a new Magento 2 store. In this case, you can start counter from 1350;

Counter Increment Step — regulates number intervals between consecutive orders. For example, in our user guide, we set Start Counter From 1350 and Counter Step is 5, it means, that the next order will have the number — 1355;

Counter Padding — sets the amount of digits in order numbers. In case you need all order numbers to have 8 symbols, set padding equal to 8. Now, your order number will have the following view — 00002657;

Reset Counter on Date Change — set the time period to automatically reset counter;

Reset Counter — tick this checkbox and hit the **Save** button to reset counter immediately.

Invoice Data Configuration

To configure invoice data expand the **Invoice** section.

Invoice

Same as Order Number	<input type="text" value="Yes"/>
Prefix	<input type="text" value="INV-"/> Will be added before the order number
Part of the order number to replace with the prefix	<input type="text"/> If you have the order number as `11/13-order`, you can replace the `-order` part with the prefix instead of adding it in the beginning.

Same as Order Number — choose **Yes** to set the same numbers for invoices and orders to meet your local record keeping standards. Or choose **No** to configure the independent numbering policy for invoices. The options will be the same as for [Order section](#);

Prefix — specify letter prefixes according to the type of document for which you modify the numbering model;

Part of the order number to replace with the prefix — fill in the static part of the order number to be replaced with the prefix.

Shipping Data Configuration

To configure shipping data expand the **Shipping** section.

Shipping

Same as Order Number

Yes

Prefix

SHI-

Will be added before the order number

Part of the order number to replace with the prefix

If you have the order number as `11/13-order`, you can replace the `-order` part with the prefix instead of adding it in the beginning.

Same as Order Number — choose **Yes** to set the same numbers for shipping and orders to meet your local record keeping standards. Or choose **No** to configure the independent numbering policy for shipping. The options will be the same as for [Order section](#);

Prefix — specify letter prefixes according to the type of document for which you modify the numbering model;

Part of the order number to replace with the prefix — fill in the static part of the order number to be replaced with the prefix.

Credit Memo Data Configuration

To configure credit memo data expand the **Credit Memo** section.

Credit Memo

Same as Order Number

Yes

Prefix

MEMO-

Will be added before the order number

Part of the order number to replace with the prefix

If you have the order number as `11/13-order`, you can replace the `-order` part with the prefix instead of adding it in the beginning.

Same as Order Number — choose **Yes** to set the same numbers for credit memos and orders to

meet your local record keeping standards. Or choose **No** to configure the independent numbering policy for credit memos. The options will be the same as for [Order section](#);

Prefix — specify letter prefixes according to the type of document for which you modify the numbering model;

Part of the order number to replace with the prefix — fill in the static part of the order number to be replaced with the prefix.

Individual Numbering per Website

You can set a separate counter per each website. To do this please switch between websites you need and set the right counter for each site.

The screenshot shows the Magento 2 Configuration interface. At the top, it says 'Configuration' with a notification bell and a user profile 'demouser'. Below this, there's a 'Store View' dropdown set to 'Main Website' and a 'Save Config' button. A sidebar on the left shows the 'AMAST' logo and a menu with 'Order Number' selected. The main content area is divided into sections: 'General' and 'Order'. In the 'General' section, 'Enabled' is set to 'Yes', 'Timezone offset' is '0 hours', and both 'Use Default' checkboxes are checked. In the 'Order' section, 'Number Format' is set to 'ORD-{yy}-{mm}-{dd}-{counter}', and the 'Use Default' checkbox is unchecked. A tooltip for the 'Number Format' field explains the variables: '{counter}', '{store}', '{yyyy}', '{yy}', '{m}', '{mm}', '{d}', '{dd}', and '{rand}'.

Allowed Variables

To make your business documents numbers unique you can use different variables. Please check this list to find the required ones:

- `{counter}` for counter;
- `{store}` for store name;
- `{yyyy}` for full year display;
- `{yy}` for shortened year display;
- `{m}` for short month display;
- `{mm}` for full month display;
- `{d}` for short day display;
- `{dd}` for full day display.

If you type ORD-{yy}-{mm}-{dd}-{counter} in the field, you will have order numbers of the kind:
ORD-13-08-15-000077

Find out how to install the Custom Order Number extension via [Composer](#).
