For more details see how the [Improved Layered Navigation](#) extension works.

Guide for Improved Layered Navigation for Magento 2 (settings)

With a feature-rich navigation module, you will easily enhance customer shopping experience by adding a handy vertical and horizontal navigation menu to your website. Filter store catalog by any product attribute, display price sliders and 'from-to widgets'. Generate custom brand pages and optimize your website for search engines.

- Configure multiple store filters to meet your specific need;
- Auto generate SEO-friendly page URLs;
- Display a 'Brand' filter;
- Use AJAX technology to streamline product filtering;
- Customize the color for selected filters;
- Import navigation attributes and brand options;
- WCAG compliance.

The extension is **read compatible with GraphQL**. Now you can expose the datasets in Improved Layered Navigation for Magento 2 via GraphQL queries.

Magento 2 Improved Layered Navigation extension is compatible with **Hyvä themes**. The compatibility is available as part of an active product subscription or Support Subscription.

For the correct Hyvä compatibility work, please install the following packages from the composer suggest:

- amasty/module-shop-by-brand-graphql
- amasty/module-shopby-hyva-compatibility
- amasty/module-shop-by-brand-hyva-compatibility
- amasty/module-shop-by-base-hyva-compatibility
- amasty/module-shopby-grouped-options-hyva

In [Improved Layered Navigation FAQ](#) you can find answers to the most popular questions about the extension functionality.

General Settings

Magento highly recommends to deploy static content after the extension installation. Improved Layered Navigation is now compatible with **Live Search**.

To get access to Magento 2 layered navigation settings, please go to **Stores → Configuration → Improved Layered Navigation**

General

Enable Ajax
[store view]

Yes

For the 'By button click' mode AJAX keeps working no matter which option is selected

Scroll to Top after AJAX Load
[store view]

Yes (to Listing Top)

Add Vertical Scrolling to Filter Block
After
[store view]

Submit Filters on Mobile
[store view]

Instantly

Highlight Selected Filter Options <small>[store view]</small>	Custom Highlight 
Text Color <small>[store view]</small>	#ff5eff
Leave the Single-Select Filter Visible after Selection <small>[store view]</small>	Yes
Hide Filters with One Available Option <small>[store view]</small>	Yes
Applies only to category filters and filters based on EAV attributes.	
Number of Unfolded Options in State <small>[store view]</small>	0
Other options will be shown after a customer clicks the "More" button.	
Exclude 'Out of Stock' Configurable Options from Navigation <small>[global]</small>	No
Parent configurable products won't be displayed in the results when filtered by an out of stock option. This setting will exclude such products from search results as well.	

How to apply filters on Desktop/Mobile with Varnish

If you need different types of cache for mobile and desktop devices, please, insert this code (line 2-8) into the section vcl_hash in the varnish configuration file (vcl).

```
sub vcl_hash {
    if (req.http.X-UA-Device ~ "^mobile"
        || req.http.X-UA-device ~ "^tablet"
    ) {
        hash_data("mobile");
    } else {
        hash_data("desktop");
    }
}
```

For the correct work of this code, please make sure that you have this [library](#) installed.

Enable AJAX - Enable AJAX to avoid page reloads.

Customers can continue selecting multiple filter options while it's loading with AJAX. This way the whole shopping process becomes seamless and fast.

CATEGORY	Shopping Options					
STOCK	NEW	SIZE	BRAND	COLOR	RATING	PRICE
NEW						
SIZE						
ACTIVITY						
BRAND <ul style="list-style-type: none"> Adidas (4) Converse (1) Canterbury (1) Jordan (1) Kookaburra (1) Lee Cooper (1) Nike (1) Reebok (3) Umbro (1) 	 <p>Canterbury Ireland RFU Home Test Jersey Mens</p> <p>\$80.00</p>	 <p>Canterbury LHM Jsy Sn53</p> <p>\$49.00 Regular Price \$56.00</p>	 <p>Lee Cooper Check Down Jacket Mens</p> <p>\$79.00</p>	 <p>Lee Cooper Gradient Jacket Mens</p> <p>\$89.00</p>	 <p>Umbro Republic of Ireland Pro Training Shower Jacket</p> <p>\$35.00</p>	 <p>Converse Four Star T Shirt</p> <p>\$12.00</p>
COLOR <ul style="list-style-type: none"> Black White Grey Green Pink Orange Purple Yellow Blue Red 						

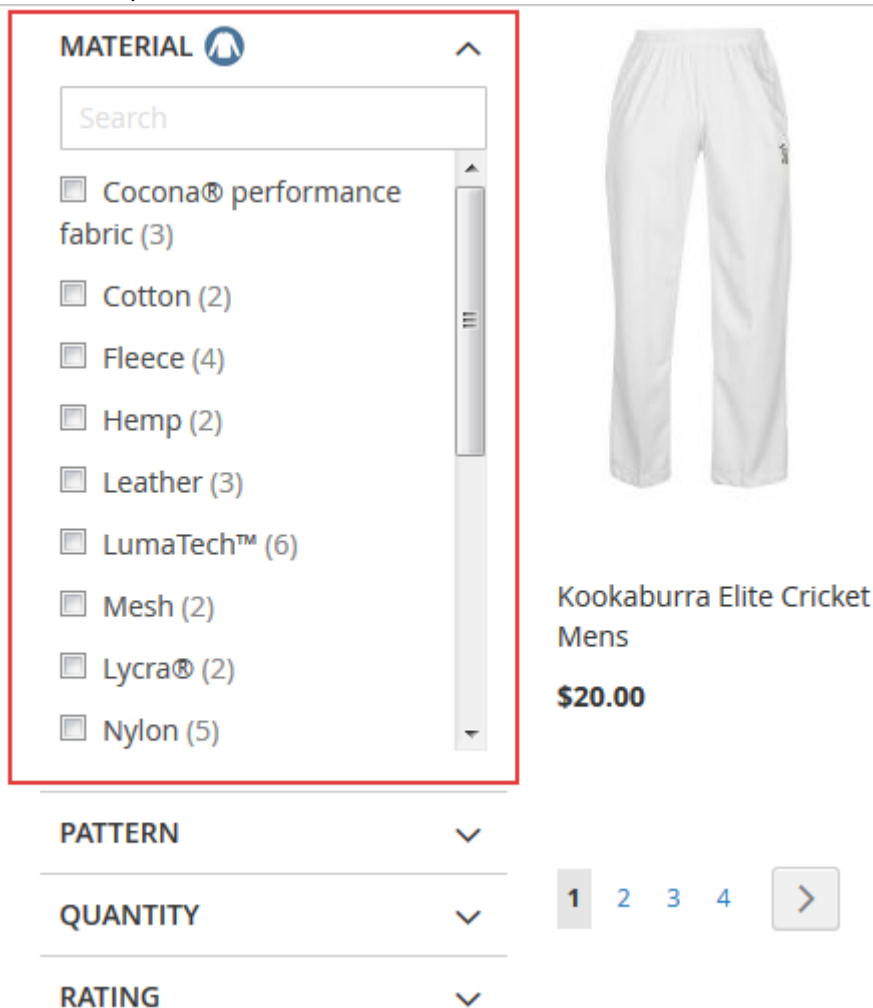

Scroll to Top after AJAX Load - With this setting, you can enable an option of scrolling to the top after filter applying by ajax. You can choose one of the three options:

- Yes (to Listing Top)
- Yes (to Page Top)
- No

Add Vertical Scrolling to Filter Block After - Specify maximal filter size (in pixels) that will be

displayed without vertical scrolling. In case a filter is higher than the indicated size, the scrolling will appear.

See a **Vertical Scroll** example

Enable Sticky Sidebar for Desktop - set to 'Yes' to pin the sidebar with filters and keep it in the user's line of sight.

Submit filters on desktop (on mobile) - Select *Instantly* mode to apply filters one by one, on the fly. With the *By Button Click* mode, customers will be able to apply multiple filters in bulk after clicking an *Apply* button.

By Button Click mode sample

Highlight Selected Filter Options - Here you can specify whether you want to use the default settings or custom color to highlight the selected filters in Category Tree on the frontend. If you choose the Custom Highlight option, an additional setting will appear, allowing you to specify a particular color. Note: this functionality is available as a part of an active product subscription or support subscription. It is temporarily unavailable for Hyvä Theme.

- Default settings frontend example:

Filterable (with results) ▼

Use in Search Results Layered Navigation

No ▼

Use in Layered Navigation - If you want an attribute to become filter in the navigation, select one of the options:

1. Filterable (with results) - a filter will be displayed only if there are products with such options in a category.
2. Filterable (no results) - a filter will be displayed even if there are no products with such options in a category.

Use in search results Layered Navigation - Enable this feature if you want the options above to be applied to the search results page.

Vertical & Horizontal Navigation

With Magento 2 Layered Navigation extension, you can display each particular filter block either in

vertical or horizontal navigation. You can also select both options if needed. To adjust filter position, please go to **Stores → Attributes → Product**, pick up the needed attribute (filter), proceed to the **Improved Layered Navigation** tab, and then choose one of the three modes in a **Show in the Block** field.

The screenshot shows the configuration page for the 'color' attribute in the Amasty Improved Layered Navigation module. The page has a top navigation bar with buttons: 'Back', 'Delete Attribute', 'Reset', 'Save and Continue Edit', and a prominent 'Save Attribute' button. On the left is a sidebar titled 'ATTRIBUTE INFORMATION' with links to 'Properties', 'Manage Labels', 'Storefront Properties', and 'Improved Layered Navigation' (which is highlighted). The main content area is titled 'Display Properties' and contains several settings:

- Display Mode:** A dropdown menu currently set to 'Images'.
- Show in the Block:** A dropdown menu with options 'Both', 'Sidebar', 'Top', and 'Both' (highlighted). This section is enclosed in a red rectangular box.
- Sort Options By:** A dropdown menu currently set to 'Position'.
- Number of Unfolded Options:** A text input field containing the number '2'. Below it, a note states: 'Other options will be shown after a customer clicks the "More" button.'
- Expand:** A dropdown menu currently set to 'Expand for desktop'. Below it, a note states: 'Allows to expand filter automatically right after a page is loaded. Set "Expand for desktop only" to keep filter minimized on mobile. Keep "Auto" to work based on the custom theme functionality.'

See the example of vertical and horizontal navigation blocks on the storefront.

Filter Display Settings

To fine-tune filter display settings please go to **Stores** → **Attributes** → **Products** and choose the necessary attribute, then click on the **Improved Layered Navigation** tab.

Display Properties

Display Mode	<div>Labels</div> <div>Labels Images Images & Labels Sidebar</div>
Show in the Block	<div></div>
Sort Options By	<div>Position</div>
Show Product Quantities	<div>Yes</div>
Show Search Box	<div>Yes</div>
Show the searchbox if the number of options more than	<div>4</div> <div>Customers will be able to search for the filter option in the searchbox.</div>
Number of Unfolded Options	<div>4</div> <div>Other options will be shown after a customer clicks the "More" button.</div>
Expand	<div>Auto (based on cu:</div> <div>Allows to expand filter automatically right after a page is loaded. Set 'Expand for desktop only' to keep filter minimized on mobile. Keep 'Auto' to work based on the custom theme functionality.</div>
Tooltip	<div>Luma Theme</div> <div>All material types are a</div>

Display Mode - Specify how to display filters - as *Labels*, *Images*, *Images & Labels*, *Text Swatches*.

Show in the Block - Specify whether to show the filter in a vertical or horizontal navigation. It's also possible to show filters in both blocks.

Sort Options By - Specify which way you would like to sort the options: by *Name*, by *Position* or by *Product Quantities*. If you choose Product Quantities, the options within the attribute will be sorted by the number of products in the options, from the highest quantity to the lowest.

Show Product Quantities - Set whether to display or not the product quantities with the filter options.

Show Search Box - Set to 'Yes' to show a search box in a filter. It is very convenient for filters with many options.

Show the search box if the number of options more than - Indicate the number of options required to display the search box in a filter.

Number of Unfolded Options - Specify the number of unfolded filter values that will be shown to customers when they click on a specific filter.

Expand - The option allows to expand filter automatically right after a page is loaded. Set 'Expand for desktop only' to keep filter minimized on mobile. Keep 'Auto' to work based on the custom theme functionality.

Example: if we specify 2 unfolded values for display, other values will be shown after a customer clicks the *Show More* link.

Tooltip - Specify the tooltip text that will be displayed for a specific filter on mouse hover. You can set different tooltips text for particular store views.

An example of a tooltip icon and a text.

Selected															
<input checked="" type="checkbox"/>	Red	<input type="color" value="#ff0000"/>													
<input checked="" type="checkbox"/>	Light Pink	<input type="color" value="#ffb6c1"/>													
<input checked="" type="checkbox"/>	Indian Red	<input type="color" value="#cd5c5c"/>													

Group Title - Specify different titles for attributes' group for each view store individually.

Group Code - Specify a group code that will be used in the URL of the filter results page by default.

Status - Enable filter group on the frontend.

Swatch - Select the main thumbnail swatch for the whole group.

Alias - Specify a custom alias if necessary that will be used in the URL of the filter results page.

Position - Set the display position for your frontend filters block. This setting defines the position only among the Group Attribute Options (created within the same attribute). It doesn't affect the positioning of common attribute options in the filter.

Attribute - Select an attribute type for which you want to create a group.

Attribute options - Once the attribute is selected you'll see corresponding attribute options. Select

the ones that you want to gather in a group.

See the option in action. When a customer selects the icon of an attribute group ('Blue' for example), the module will display all products with the attributes from the 'Blue' group.

Fine-Tuning Filters

Simple attribute filters are presented in Magento by design. They are derived from the attributes of **Catalog Input Type for Store Owner=Multiple Select**. An attribute becomes a filter, if there is a **Use in Layered Navigation** setting.

Attribute Filters

Available settings in the Display Properties section are the following:

(the specific for simple attribute-filters are highlighted)

- **Display Mode (Labels / Images / Images & Labels)**
- **Show in the Block (Sidebar / Top / Both)**
- **Sort Options By** (Position / Name)
- Show Product Quantities
- **Show Search Box** (only in the *Labels* mode)
- **Number of unfolded options** (only in the *Labels* mode)
- Expand
- Tooltip
- Visible In Categories
- Show only when any option of attributes below is selected
- Show only if the following option is selected
- Show icon on the product page

Show Search Box adds a text field for the quick search under the options. It hides the options that don't correspond to the request.

Number of unfolded options indicates options that will be displayed right after the page is loaded. The other options are hidden with the *Show more* button. This is useful, when there are many options.

NOTE: While filtering with *Search Box*, the *Number of unfolded options* option becomes timely unavailable and all the filter options become visible.

Expand - Expand filter right after a page is loaded. The setting may be helpful for the themes, where filters are hidden by default.

If a filter is applied, it will be expanded in any case, independently from this setting.

Tooltip - Add a pictogram to a filter. When you hover over a pictogram, a pop-up hint appears.

XS S M L

You can upload any pictogram to **Improved Layered Navigation - Tooltip**.

Visible in Categories - It defines what categories includes a filter.

Show only when any option of attributes below is selected - It allows to manage a correlation between one filter visibility and the several others. Thus, if you specify a few other attributes here, the filter will be visible only if one of the specified filters is used by a visitor.

Show only if the following option is selected - It allows to manage a correlation with other filters in more detail. Specify individual options of another filter, rather than a filter all-in-all.

Available settings in the Filtering section:

- Allow Multiselect
- Multiple Values Logic

Multiple Values Logic - Show products with any values. A product is selected, if at least one of

the filter's options match with its attributes' values.

Multiple Values Logic - Show products with ALL values only. A product is selected, if all the filter's options match with its attributes' values.

Filter SEO settings

For each filter, including Yes/No filters and Category filters with Multiselect, you can find the following settings in the SEO section:

- Generate SEO URL
- Allow Google to INDEX the Category Page with the Filter Applied
- Allow Google to FOLLOW Links on the Category Page with the Filter Applied
- Add rel="nofollow" to filter links (Auto / No)
- Attribute URL Alias

SEO

Generate SEO URL	<input type="text" value="Yes"/>
Allow Google to INDEX the Category Page with the Filter Applied	<input type="text" value="Never"/>
Allow Google to FOLLOW Links on the Category Page with the Filter Applied	<input type="text" value="Never"/>
Add rel='nofollow' to Filter Links	<input type="text" value="Auto"/>
Attribute URL Alias	<div>Luma Theme</div> <div><input type="text"/></div>

If left empty, Attribute Code value will be used.

To enable SEO setting for Yes/No filters please go to **Stores → Configuration → Improved Layered Navigation: SEO → Include Attribute Code** → set to 'Yes'

SEO URLs

Enable [store view]	<input type="text" value="Yes"/>	▼
URL will look 'category/autumn.html' instead of 'category.html?season=114'.		
SEO-friendly URLs for Attributes (Default Value) [store view]	<input type="text" value="Not Generated"/>	▼
Go to Stores - Attributes - Product - {attribute_name} - Improved Layered Navigation - SEO - Generate SEO URL setting to apply per-attribute fine-tuning.		
Include Attribute Code [store view]	<input type="text" value="Yes"/>	▼
Select 'Yes' to add attribute code to the URL scheme, e.g. 'black' -> 'color_black'. Attribute Code alias can be adjusted per store view on an attribute edit page (Improved Layered Navigation tab).		
Filter Key [store view]	<input type="text"/>	
It allows to add filter key to the URL scheme, e.g. black-xl-activity -> shopby/black-xl-activity		
Add Suffix to the Brand Pages and All-products Pages [store view]	<input type="text" value="No"/>	▼
To configure the 'Category URL Suffix' setting please go to Configuration - Catalog - Catalog - Search Engine Optimization - Category URL Suffix. FYI on the category pages the suffix is added regardless of this setting.		

Generate SEO URL. When you filter by this attribute, it removes the parameter from the *GET-request* and embeds it in the main part of the URL with *alias*, optimized for the search engines. For instance, category/cotton.html instead of category.html?material=46. It is active, if SEO URL generator is enabled in the general SEO settings.

category/cotton.html instead of **category.html?material=46**

Allow Google to INDEX/FOLLOW the Category Page with the Filter Applied - the option allows to block the indexing and prevent the search crawlers from going through links on the pages, where the filter is applied. It is implemented with the meta-tag robots. Active, when the option *Allow the Module to Modify Robots Meta Tag* is enabled in the *SEO general settings*.

The exception: the brand page is always *INDEX*, independently from the brand SEO settings. The other applied filters - if there are active - continue to affect robots. There are also some differences in performance with the *Robots* tag on the Custom Page.

Add rel="nofollow" to filter links allows to block the path to links that are unavailable by design. Thus it decreases the stress on a search robot. It is active, when the option **Automatically add rel="nofollow" to filter links when required** is enabled in the **SEO general settings**. You can disable this parameter, when the attribute takes part in the Custom Page formation. This will help the search robot reach the necessary page.

Attribute URL Alias - the option allows a store admin to set a custom URL alias for an attribute. If the field is left empty, the attribute code value will be used as an URL alias.

Swatch Filters

The attributes from **Catalog Input Type for Store Owner = Visual Swatch / Text Swatch** in Magento are displayed in a particular way: as images or pictograms with texts. That is why, the kit of settings in Improved Navigation is different.

Available settings in the Display Properties section:

- Display Mode (Labels / **Images** / **Images & Labels** / **Text Swatches**)
- Show in the Block
- Sort Options By (Position / Name)
- Show Product Quantities (only for *Labels*, *Dropdown*, *Images & Labels* mode)
- Show Search Box (only for *Labels* and *Images & Labels*)
- Number of unfolded options (except *Dropdown* mode)
- Expand
- Tooltip
- Visible In Categories
- Show only when any option of attributes below is selected
- Show only if the following option is selected
- Show icon on the product page

The settings in the **Filtering** and **SEO** sections are identical to the settings for simple attributes.

Manage Options

To manage filter options, go to **Admin panel → Stores → Attributes → Product → Attribute Information → Properties → Manage Options (Values of Your Attribute)** → Select an **option** → Click **Settings** button.

Here you can make the option **Featured** if needed. It is useful if you want to display only particular options in the filter. It is also possible to specify particular filter options to improve **SEO**. The following option settings are available:

- Meta Data (Meta Title, Meta Description, Meta Keywords)
- Page Content (Page Title, Description, Image, Top CMS Block)
- SEO (URL Alias)
- Other (Small Image, Small Image Alt)

Meta Data and Page Content are added to the page according to the settings specified in the

sections **Improved Layered Navigation > Category Title** and **Description Improved Layered Navigation > Category Meta Tags**. It is added, when you filter products by particular option. Also these settings are applied on the page of the appropriate brand, replacing data set by default.

Improved Layered Navigation automatically generates **URL Alias** for the filter options. To enable this, leave an empty field.

Please, consider: if you change this setting, the prior urls will become unavailable.

Price & Decimal

Price & Decimal are filters that are featured in Magento by design.

Decimal is any attribute of the price type, except the price itself. **Decimal** attributes are often used to store the values, that don't relate to the price (e.g., *size, length, weight, etc*). This is convenient, as far as you can specify any arbitrary values in decimals, rather than selecting them from variants.

The multiselect is not available for price and decimal filters.

To hide zero decimal for the price filter, navigate to **Stores → Product → Select 'Price' attribute → go to Improved Layered Navigation** tab

ATTRIBUTE INFORMATION

- Properties
- Manage Labels
- Storefront Properties
- Improved Layered Navigation**

Display Properties

Display Mode
Slider

Hide Zero Decimal
Yes

Add From-To Widget
Yes

Minimum Slider Value

Please specify the min value to limit the slider, e.g. <\$10

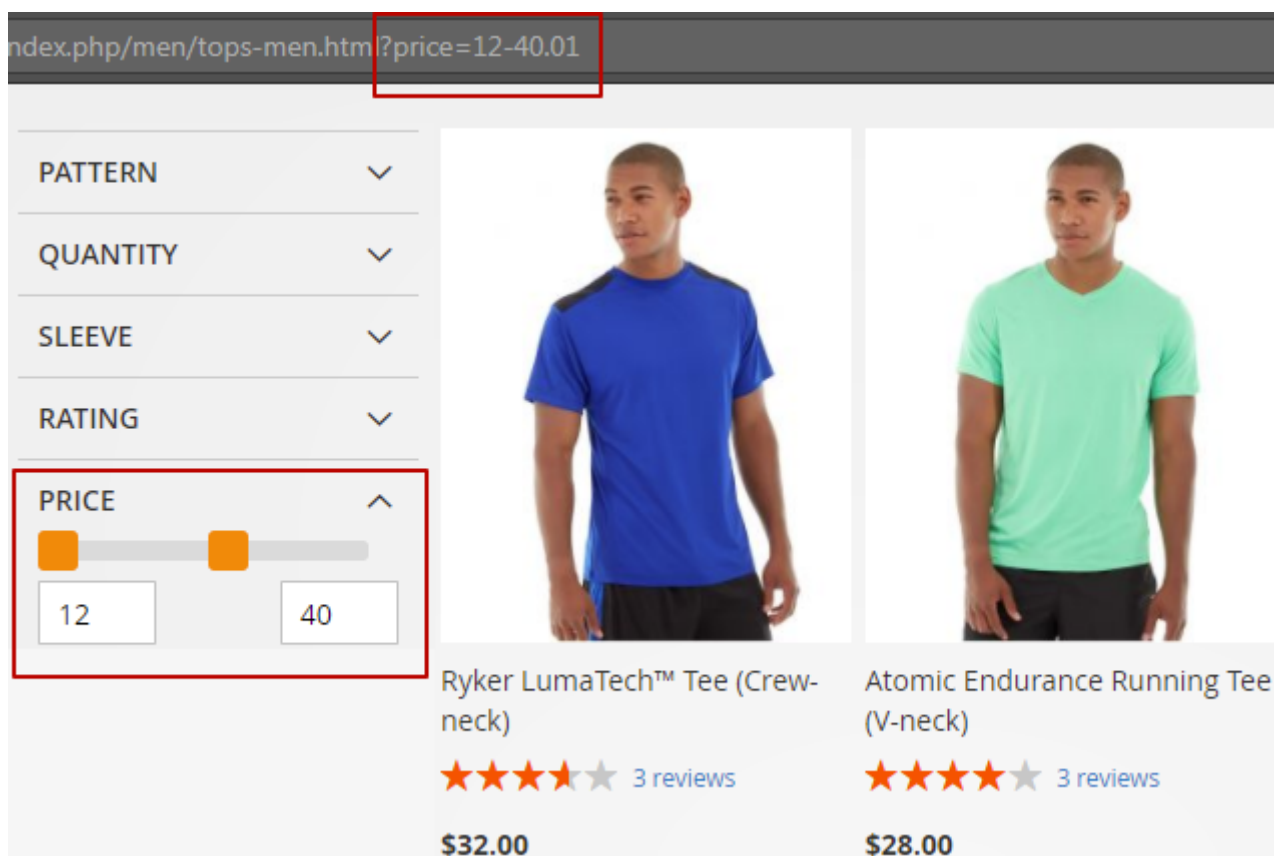

Hide Zero Decimal - set to 'Yes' to display price without the zero decimal.

Available SEO Settings

SEO URL is not available, as *Price* and *Decimal* attributes are added to the URL as a GET parameter: **category.html?price=100-200**

If the filter is applied, then the robots tag takes the value *"noindex, nofollow"* (if **Allow the Module to Modify Robots Meta Tag** is enabled in the SEO settings). Accordingly, direct links to filtering should have the attribute *rel="nofollow"* (if **Automatically add rel="nofollow" to filter links when required** is enabled in the SEO settings)

Magento forms price intervals, including the lower limit and excluding the upper one, for one product does not fall into several intervals at the same time. For example, the interval in the filter is specified as 40.00-49.99, the same interval is also specified in the block **Currently Shopping By**. Although, in the URL, the upper limit is extended by 0.01 (price = 40-50). If the filtering is done using a slider, or *from-to widget*, then the products must include products that match the end points as well. For this purpose, in case the visitor filters using a slider or *from-to widget*, the extension adds 0.01 to the top border (into the URL) to neutralize the Magento's correction by default.

Multiple Currencies

If a store's currency differs from the base currency, the values are recalculated according to the rates only for the Price filter, but not for Decimal.

Available settings in the Display Properties section:

(the specific ones for Price and Decimal filters are highlighted)

- **Display Mode** (Ranges / Dropdown (Deprecated) / Slider / From-To Only)
- **Add From-To Widget** (except From-To Only)
- **Minimum Slider Value** (only for Slider mode)
- **Maximum Slider Value** (only for Slider mode)
- **Slider Step** (only for Slider mode)
- **Measure Units** (Store Currency / Custom Label)
- **Unit Label** (if Custom Label is selected)
- Show in Block
- Show Product Quantities
- Expand
- Tooltip
- Visible In Categories
- Show only when any option of attributes below is selected
- Show only if the following option is selected

Add From-To Widget adds a widget to the filter and offers an alternative filtering method in addition to the selected *Display Mode*.

The screenshot shows a 'PRICE' filter widget. At the top, the word 'PRICE' is in blue, followed by a small upward arrow icon. Below this is a horizontal slider with two orange circular handles. Under the slider are two input boxes containing the numbers '25' and '83', separated by a minus sign. At the bottom of the widget is a blue rectangular button with the word 'Apply' in white text.

Minimum Slider Value and **Maximum Slider Value** narrow the limit of the slider for the convenient filtering.

For instance, there are products in the category within the price range from 20 to 200\$. But there are also several products with the price above 1000\$. Admin can specify the **Maximum Slider Value** to 200\$, and the products with the price above 1000\$ will not be included in a sample. However, if customers leave the slider untouched while filtering, these expensive products will be displayed in the search results.

Slider Step allows you to specify the step of the slider. It can be either an integer or a fractional number.

Measure Units and **Unit Label** determine the unit of measurement. By default, this is the currency of the current store. It is used on the frontend: in the filter block and in the **Currently Shopping By** section.

You can set the name for the default category in **Products** - > **Categories**, e.g. All products

Brand Settings

General Settings

To configure general Brands Settings please go to **Stores → Configuration → Improved Layered Navigation → Brands**

General

Brand Attribute [global]	<input type="text" value="brand"/>	▼
Creates SEO-friendly brand pages. Every page contains all your products filtered by particular brand and contains unique content that you assigned for the option of brand attribute.		
URL Key [store view]	<input type="text"/>	
Adds a key before brand name in URL like /[key]/brand-name.html.		
Choose CMS Page [store view]	<input type="text" value="Shop by Brand"/>	▼
Please make sure the CMS page is enabled (Content -> Elements -> Pages).		
Add Brands Link to Top Menu [store view]	<input type="text" value="Display Last"/>	▼
Display Link to All Brands Page in Top Menu.		
Show Brands List Popup [store view]	<input type="text" value="Yes"/>	▼
Enable to display the popup with brands upon hovering over the corresponding top menu link.		

Brand Attribute - Here you can set an attribute that will be used as a brand. You can use different attributes as a brand for different store views. It is also possible to setup nice short URLs for pages of a brand attribute (or any other one you prefer), e.g.:

- example.com/canon.html
- example.com/nike.html

To generate such URLs for an attribute, please specify the code of the attribute in the **Brand Attribute** field. This feature works only for one attribute at a time.

URL Key - Specify the key that will be added to the URL before the brand name. E.g. your-site/brand/brand-name.html

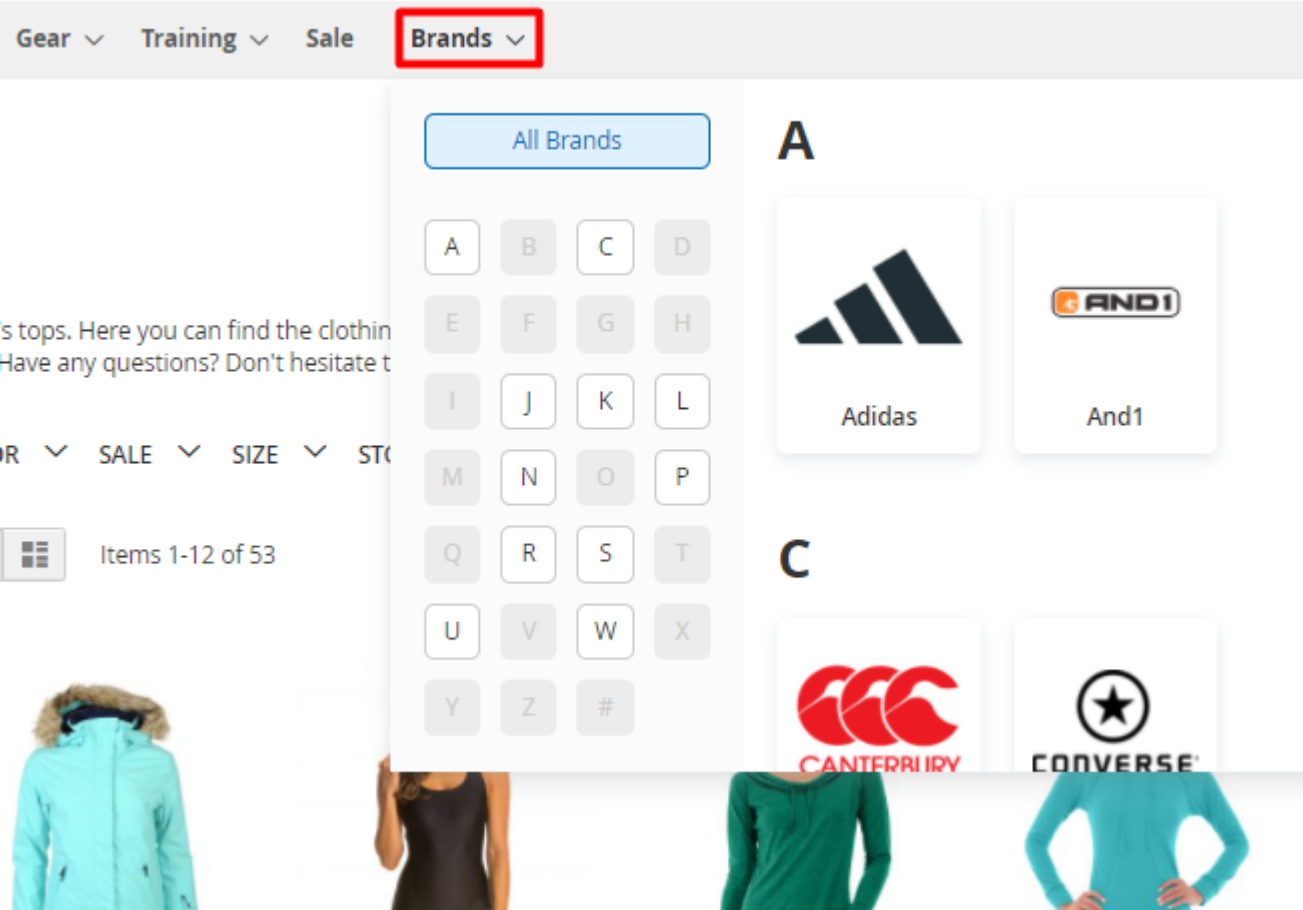

Choose CMS page - select a CMS page where the All Brands List will be shown.

Add Brands Link to Top Menu- choose whether to display a Brands link leading to the All Brand Page on the top menu bar. To configure the link position, select one of **two modes**:

- Display First
- Display Last

Show Brands List Popup - display brands list and filter them by a character right in the top menu Brands dropdown.

Enjoy fast, convenient and excellent browsing experience.

Brand Management

To manage brands, please navigate to **Content** → **Amasty Layered Navigation** → **Brand Management**.

In this section, you can conveniently manage all the brands from the grid. For each brand, you can add custom descriptions and logos, adjust position in a slider, insert various CMS blocks and banners, add metadata, and etc. Also, here you can view what attribute is used for brand for a particular store view. You can set different attributes as a brand for different stores in the Brands General Settings Section (**Stores** → **Configuration** → **Improved Layered Navigation: Brands** → **General**).

Here you can:

- Reorder items using drag-and-drop
- Place particular products at the top of the listing
- Adjust sorting options
- Move products through the pages
- Pin particular ones

With the add-on, you can manage product sorting for particular store views separately.

First, set the necessary sort order, according to which all products will be displayed.

Products

Sort Order ▼

None

Default Sorting

- Move out of stock to bottom
- Newest products first
- Name: Ascending
- Name: Descending
- Price: Ascending
- Price: Descending

Sort Order - select from the dropdown the preferable way of the automatic ordering of the product listing.

Available options:

- Move out of stock to the bottom
- Newest products first
- Name: Ascending
- Name: Descending
- Price: Ascending
- Price: Descending

Search Products - find products within one current brand product listing by SKU or name.

In the **Visible Items** field the number of all the products that fall under the specified conditions is displayed.

Keep in mind that only **Enabled** products with the **Visible Individually** option can be displayed.

Drag-and-drop brand products according to your current marketing needs.

Move to Top - hit this button to send a particular item to the first position in the list.

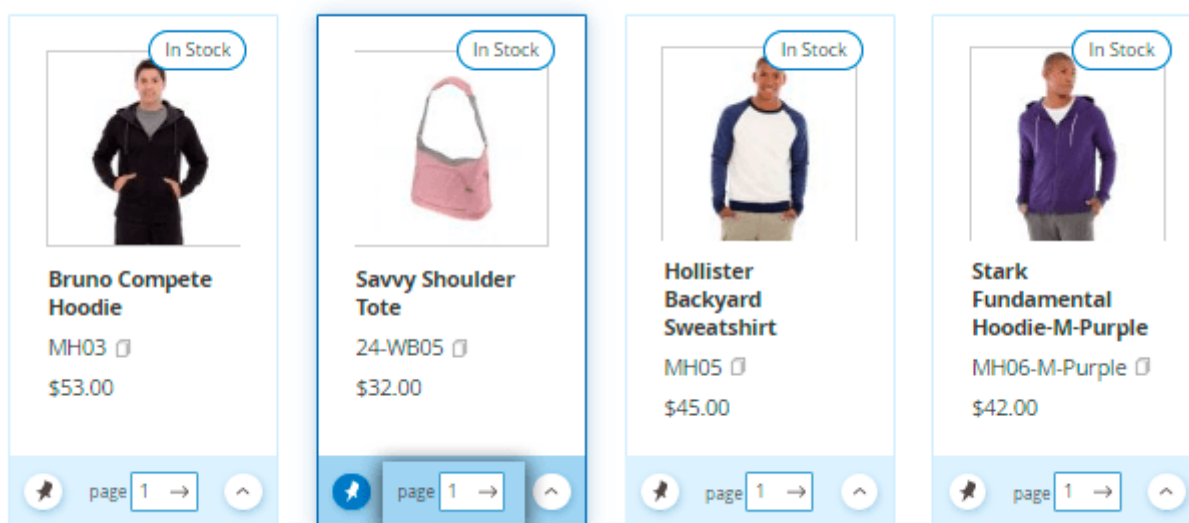

amasty

Once you drag a particular product, the **Manual** mode is set automatically and it is “pinned” to a particular location. The feature helps to fixate a product in the same position even after the automatic sorting is activated too.

Moreover, the number of products per page in the admin panel equals the number of products customers see on the frontend. Thus, you will see how the products will be displayed to customers on each page.

With the **move products through the pages** feature it is possible to adjust the of products per each page by moving particular products to another page. As the page number is changed, the product becomes last on this page.

As the result, we set the follwing products order:

SEO Settings

Migration from Magento 1

If you've been using Improved Layered Navigation extension by Amasty for Magento 1 and now are going to migrate to M2, please pay a careful attention to your **URL settings**.

If you have URLs working based on 'Long with URL key' setting in Magento 1, then, please, configure the following options to migrate to Magento 2 and keep the existing URLs:

Include Attribute Name = Yes

Filter Key = shopby

See more information on this options below.

SEO URLs & Robots Tag Control

Check some useful tips and tricks on best SEO practices in our recent article [Magento 2 Layered Navigation: Best Settings For SEO](#)

To manage SEO URLs, go to **Stores → Configuration → Amasty extensions → Improved Layered Navigation:SEO**

SEO URLs

Enable
[store view]

Yes

URL will look 'category/autumn.html' instead of 'category.html?season=114'.

SEO-friendly URLs for Attributes (Default Value)
[store view]

Generated

Go to Stores - Attributes - Product - {attribute_name} - Improved Layered Navigation - SEO - Generate SEO URL setting to apply per-attribute fine-tuning.

Include Attribute Code
[store view]

Yes

Select 'Yes' to add attribute code to the URL scheme, e.g. 'black' -> 'color_black'. Attribute Code alias can be adjusted per store view on an attribute edit page (Improved Layered Navigation tab).

Use 301 Redirect for SEO-optimized URLs
[store view]

Yes

If enabled, it redirects from former URLs to SEO-friendly once these URLs are optimized by our module.

Filter Key
[store view]

It allows to add filter key to the URL scheme, e.g. black-xl-activity -> shopby/black-xl-activity

Add Suffix to the Brand Pages and All-products Pages
[store view]

No

To configure the 'Category URL Suffix' setting please go to Configuration - Catalog - Catalog - Search Engine Optimization - Category URL Suffix. FYI on the category pages the suffix is added regardless of this setting.

Replace Special Characters With
[store view]

-

Separate Attribute Options With
[store view]

-

Enable - Set the option to 'yes' to optimize store URLs for search engines. The URLs will become short and clear.

SEO-friendly URLs for Attributes (Default Value) - with this setting you can generate SEO-friendly URLs for attributes in bulk. Go to Stores - Attributes - Product - {attribute_name} - Improved Layered Navigation - SEO - Generate SEO URL setting to apply per-attribute fine-tuning.

Include Attribute Code - Select 'Yes' to add attribute code to the URL scheme, e.g. 'black' -> 'color_black'. Attribute Code alias can be adjusted per store view on an attribute edit page (Improved

Layered Navigation tab). Also, if this setting is set to Yes the URLs will not contain -1 -2 -3.

Use 301 Redirect for SEO-optimized URLs - If enabled, it redirects from former URLs to SEO-friendly once these URLs are optimized by our module. Note: the compatibility is available as a part of an active product subscription or support subscription.

Filter Key - The option allows to add a filter key to the URL scheme, e.g. example.com/black-xl-activity → example.com/shopby/black-xl-activity.

Add Suffix to the Brand Pages and Filtered All-products Pages - Set to Yes to add a particular SEO suffix to brand pages.

Replace Special Characters With - Specify how to replace special characters.

Separate Attribute Options With - Select the URL separator for the selected attribute options.

You can use the dash symbol in the **Replace Special Characters With** and **Separate Attribute Options With** fields simultaneously. But this method has a significant drawback. Let's compare the methods of using the same and different separators:

1. The same separator.

When building SEO URLs, the system may mistakenly regard one option as another. As a consequence, the results will be irrelevant.

E.g.: 3 different attributes have different options: "red", "cotton" and "new". This is how they will be displayed together in the link: "red-cotton-new" (when you apply a filter containing these 3 options). And there exists the 4-th attribute: its option displays on the frontend as "red+cotton=new". According to the setting, all these symbols will be replaced to the dash separator. As a result: the system may take the filter of three options as a filter of one option (we'll receive 2 identical filters: "red-cotton-new").

2. Different separators.

The situation described in the previous paragraph is impossible. When you replace special characters with the "_" symbol and separate attribute options with the dash symbol, you'll get 2 different filters: "red-cotton-new" and "red_cotton_new". In addition, this method provides higher productivity with a large amount of data and filters.

To specify the suffix, go to **Configuration → Catalog → Catalog → Search Engine Optimization → Category URL Suffix**.

Robots Tag Control

Allow the Module to Modify Robots

Meta Tag

[\[store view\]](#)

Yes

Use "No" for compatibility with other SEO extensions.

Noindex when Multiple Attribute Filters

Applied

[\[store view\]](#)

No

Automatically Add rel="nofollow" to
Filter Links when Required

[\[store view\]](#)

Yes

Please refer per-filter settings to make exclusions.

Noindex for paginated pages

[\[store view\]](#)

No

Allow the module to modify robots meta tags - Enable robots tag control to let the module manage indexation according to SEO settings for each attribute. If you disable the option, search engines will index all the store content.

Noindex when Multiple Attribute Filters Applied - Enable this option to set the robots to the noindex values for multiple filters.

Automatically Add rel="nofollow" to Filter Links when Required - Enable this option to automatically add rel="nofollow" to the filter links and set the "nofollow" robot tag. This setting helps to exclude filter links from search engine indexation if necessary.

Noindex for paginated pages - Set to **Yes** to set the robots to noindex for paginated pages.

Canonical URL Settings

Canonical URL

To get these settings working properly please make sure you have enabled the Canonical Meta Tag [here](#) (Stores > Configuration > Catalog > Search Engine Optimizations).

Canonical link is not visible for NOINDEX pages.

Need help with the setting? Please consult the [user guide](#) to configure properly.

Category Pages

[\[store view\]](#)

Brand Filter Only

Set the structure of canonical urls for category pages.

Brand Pages

[\[store view\]](#)

Keep current URL

"all-product" Page

[\[store view\]](#)

URL Key Only

You can set structure of canonical URLs for 'key'-related ('Canonical URL' setting) and

category ('Category Canonical URL' setting) pages:

1. If you choose a "Keep current URL" option for category page, the canonical URL will have all information and will look like:

```
http://www.your_store.com/category/URL_Key.html?all_get_parameters_displayed_in_state
```

For "all product" page it will look like on the example below:

```
http://www.your_store.com/URL_Key.html?all_get_parameters_displayed_in_state
```

Please keep in mind, that all toolbar parameters (list mode, order, dir, limit), except pagination, won't be added to canonical URL.

You can customize the All Products Page URL in Stores→Configuration→Improved Layered Navigation→All Products.

2. If you select the "First attribute value" for category page, the canonical URL will look like this:

```
http://www.your_store.com/category/URL_Key.html?first_attribute_displayed_in_state
```

Brand Pages - set canonical URLs for Brand pages.

Available options:

- Keep Current URL - default
- URL Without Filters
- First Attribute Value
- Current URL without Get Parameters

For "all product" it will be generated like this:

```
http://www.your_store.com/URL_Key.html?first_attribute_displayed_in_state
```

Please, note that attribute's position in URL depends on specified attribute priority.

3. With the "Current URL without get parameters" for both "all product" pages and categories, canonical URL will have SEO-friendly attributes and a filter key:

```
http://www.your_store.com/category/URL_Key/seo_friendly_attribute_displayed_in_state.html
```

4. If you choose the "Without filters" option for category page, canonical URL will miss all filters and toolbar attributes (except pagination). As an example:

```
http://www.your_store.com/category/URL_Key.html?p=x
```

5. With “Brand Filter only” option for category page, the canonical URL will have brand attribute value:

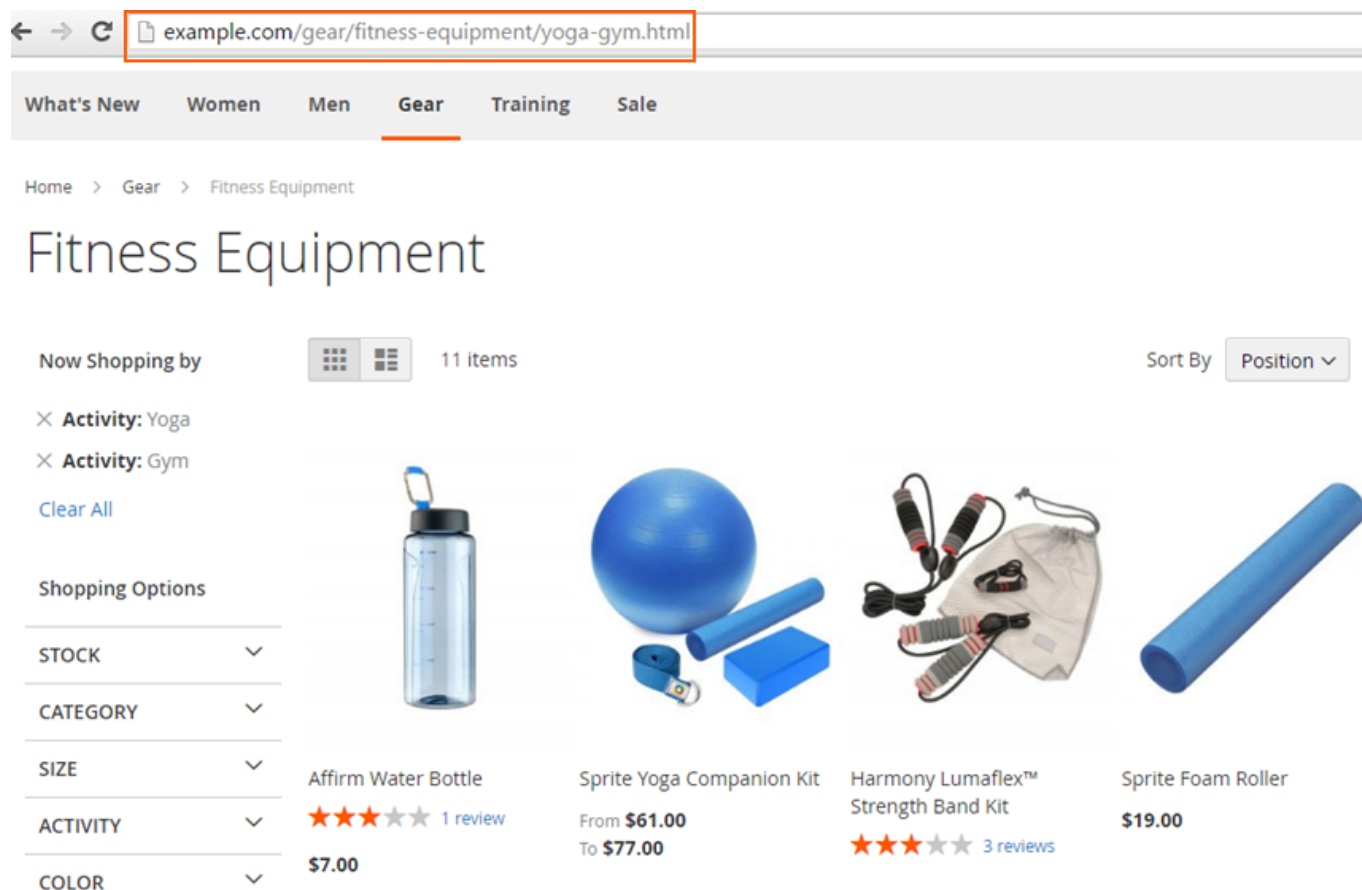

```
http://www.your_store.com/category/URL_Key.html?brand_attribute_displayed_in_state
```

6. If you select the URL Key Only For “all product” page, the canonical URL will look like specified in the example below:

```
http://www.your_store.com/URL_Key.html
```

Pagination Settings

To bring your web store SEO to a top tier, you may as well want to check out new **Amasty SEO Toolkit for Magento 2**.

Pagination Settings

Use Prev/Next Tags for Improved Navigation Pages

[store view]

Yes

Set 'Yes' to use rel="next" and rel="prev" tags and point Google where the next or the previous pages are. Please click [here](#) to learn more details.

Add Page Number to Meta Title

[store view]

No

Adds the Page Number at the end of the Meta Title, e.g. 'Apparel | Page 5'

Add Page Number to Meta Description

[store view]

No

Adds the Page Number at the end of the Meta Description, e.g. 'Apparel Description | Page 5'

Use Prev/Next Tags for Improved Navigation Pages - Enable this option to help Google properly index your paginated content.

Add Page Number to Meta Title - Enable the option to add page numbers to meta titles, for example, 'Gear | Page 5'. This will fasten the work of search crawlers and the index building process.

Add Page Number to Meta Description - Set the option to **Yes** to add page numbers to meta descriptions. For instance, 'Gear Description | Page 3'.

Custom URL Alias

To customize **URL Alias** for pages with filtered options make sure you set the 'Generate SEO URL' option to 'Yes' (Stores → Attributes → Product → choose necessary attribute and open Improved Navigation tab).

SEO

Generate SEO URL

Render All Categories Tree - Specify to what extent the tree should be expanded.

- Yes (Render Full Categories Tree);
- No (For category filter tree customization);

Category Tree Depth - Specify the maximal level number for a category tree.

Render Categories Level - Indicate the level from which categories will be shown. There are 3 levels available:

- Root Category
- Current Category Level
- Current Category Children

To get the **Render Categories Level** configuration available, you need to set the **Category Tree Depth** at **2 minimum**, then press Enter button on the keyboard.

Subcategories View - For the Labels display type you can specify the subcategories view mode: Folding/Fly-Out.

Please, make sure all parent categories have set is_anchor flag

Category Tree Display Mode - Specify the mode for category tree presentation. You can display only text, only images, or both.

INDEX, NOFOLLOW
NOINDEX, NOFOLLOW

Meta Tags Tab - Specify **Meta Title**, **Description**, **Meta Keywords** and **Canonical URL** for each Custom Page you create. In this section you can also adjust **Robots Tag Control**. Choose the option you need:

- Index, follow - allows robots to index the page and follow links.
- Noindex, follow - the page will not be indexed by search engines, but robots can follow links from this page to others.
- Index, nofollow - permits indexing of the page, but robots will not follow the links within it.
- Noindex, nofollow - prevents indexing of content on the respective page and also prevents robots from following links.

IMPORTANT: Specify the **Canonical Url** when you're adding your custom navigation page to the sitemap with the **XML Google Sitemap** extension.

Categories & Store Views Tab - Select store views for which the page will be available. Choose categories products from which will be displayed on a custom page.

The screenshot displays the 'Stay Bright' custom page configuration. On the left, a sidebar under 'CUSTOM PAGE INFORMATION' includes sections for 'Page Text', 'Meta Tags', 'Categories & Store Views', and 'Filter Selections'. The main configuration area, titled 'Selection #1', features a 'Filter' dropdown menu currently set to 'Color'. Below it, a 'Value' dropdown menu is open, showing a list of color options: Black, Blue, Brown (which is highlighted), Gray, Green, Lavender, Multi, Orange, Purple, Red, White, and Yellow. Further down, there is an 'Add Selection' section with another 'Filter' dropdown menu.

Filter & Filter Value - Select an attribute with its value. You can specify as many combinations (*filter+value*) as you need for a custom page. For instance, specify **selection#1** with *color-red* and **selection#2** with *brand-puma* to display only *red puma* items on a custom page.

See an example of a **custom page with specific filter results**.

Need a navigation tree on CMS pages?

Add [Magento 2 Landing Pages](#) module and gain the ability to effortlessly add products to any CMS page and utilize our convenient navigation tree, allowing you to meet the needs of your visitors and deliver requested products with lightning speed.

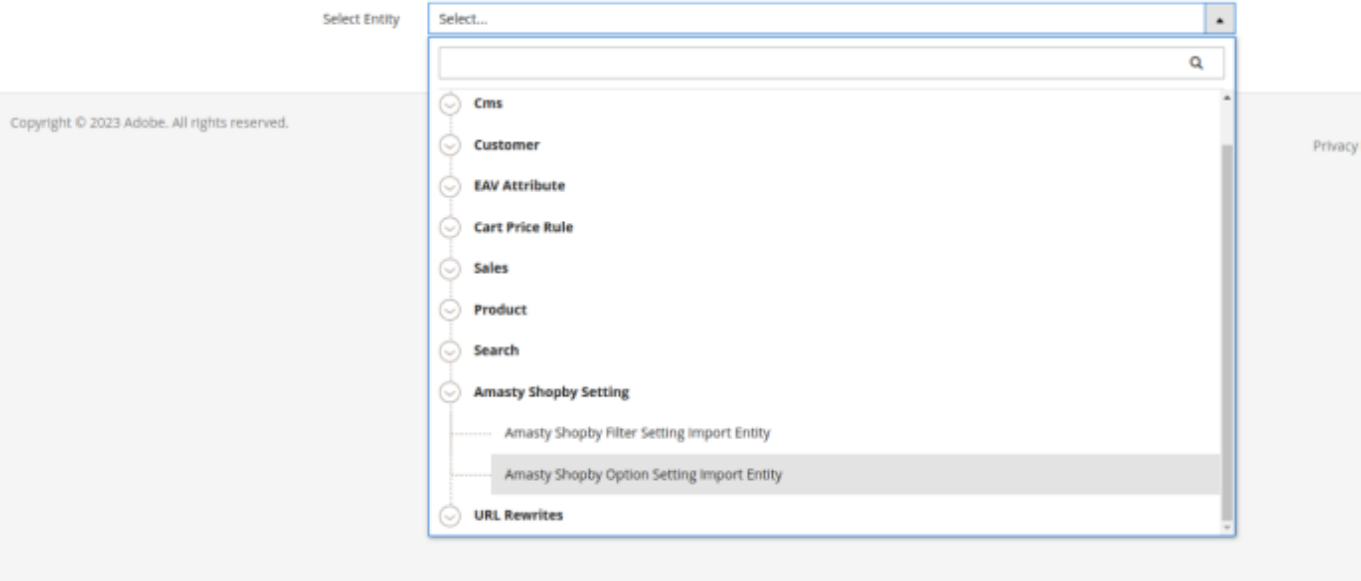

Import

Now, when installing packages, you can **import navigation attributes** and **brand options data** for Improved Layered Navigation Pro and Premium. To do this, please choose the *Shopby Filter Setting*

Import Entity and/or Shopby Option Setting Import Entity in the Import settings.

New Import Cron Job

Job Settings

API Methods

You can use Magento web API integrators to communicate with the **Shop By Page** functionality.

The following methods are available:

POST	/V1/amasty_shopbypage/page
GET	/V1/amasty_shopbypage/page
PUT	/V1/amasty_shopbypage/page/{pageId}
DELETE	/V1/amasty_shopbypage/page/{pageId}
GET	/V1/amasty_shopbypage/page/list

POST request - to create or update a resource;

GET request - to retrieve data from a server;

PUT request - to create or update a particular page;

DELETE request - to delete a particular page.

PWA for Improved Layered Navigation (Add-On)

Implement a PWA-ready solution to offer handy navigation on mobiles and tablets. With the Improved Layered Navigation PWA add-on, customers can easily find needed products in the catalog using various filters on any device.

Please keep in mind, the PWA add-on will work properly only if the original Improved Layered Navigation extension for Magento 2 and a PWA theme are installed. Learn more on how to [install PWA Studio here](#).

In order to correctly install a PWA add-on, please install the **corresponding GraphQL system package** first. For the correct name of it, please check the *composer.json* file of the main module. For example, the GraphQL system package name of the PWA add-on for the Blog Pro extension would be the following: **amasty/blog-graphql**

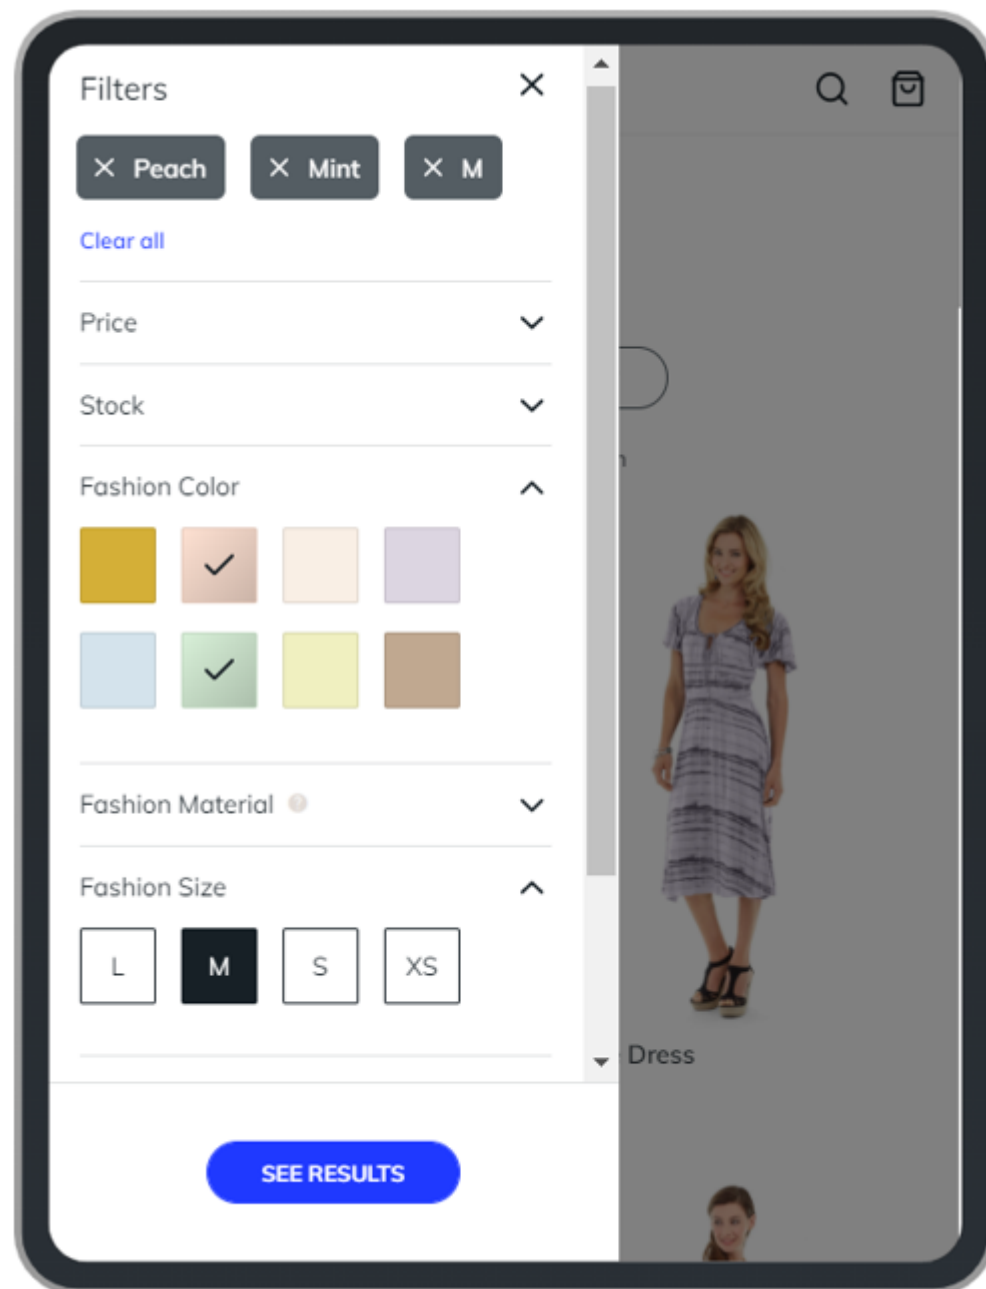

```
{
  "name": "amasty/blog",
  "description": "Amasty Blog Pro",
  "require": {
    "php": ">=7.3.0",
    "amasty/base": ">=1.13.4",
    "amasty/email-unsubscribe": "*",
    "amasty/cron-schedule-list": "*",
    "magento/framework": ">=102.0.0",
    "magento/module-catalog": "*"
  },
  "suggest": {
    "amasty/blog-page-builder": "Install blog-page-builder module to activate PageBuilder and Blog Pro integration.",
    "amasty/blog-graphql": "Install blog-graphql module to activate GraphQL and Blog Pro integration.",
    "amasty/module-blog-mftf-3": "Install module-blog-mftf-3 module to be able to run Blog Pro MFTF tests for Magento 2.4.0+ version.",
    "amasty/module-blog-pro-to-builder": "Install Amasty_BlogProToBuilder module to activate the integration with Custom Reports Builder extens"
  },
  "type": "magento2-module",
  "version": "2.10.4",
  "license": [
    "Commercial"
  ],
  "autoload": {
    "files": [
      "registration.php"
    ]
  }
}
```

If the add-on is installed, the Venia theme will display filters on mobile in the following way:

You can additionally implement PWA for [Shop by Brand](#) add-on to use brand management functionality.

How it looks on tablet:

For more information about Magento PWA integration, check out [here](#).

How AJAX works in Improved Layered Navigation for Magento 2

If AJAX is enabled, visitors can continuously select multiple filter options without page reloads. This feature provides a smooth and fast shopping experience. To make it possible, we use AJAX call to controller method within Magento. AJAX allows your store web pages to be updated separately by exchanging data with a web server behind the scenes.

In Magento 2, we call controller using AJAX to promptly fetch data from backend to frontend without reloading the web page. When a user applies a new filter in the navigation block in Magento 2, AJAX makes a request in the controller to the server, interprets the results, and updates the current screen. That is how you create an enjoyable shopping experience for your customers.

Find out how to install the **Improved Layered Navigation** extension for Magento 2 via [Composer](#).

🔗 Any concerns about module configuration and implementation?

Book an individual training session to explore how the extension works and what practices to implement to achieve the desired result. Save time spent searching for the right settings - discuss configuration cases suitable for your business with the experts and work out the flow that your team needs.
