Use Auto Generation
▲ If you select and save the rule you will be able to generate multiple coupon codes.

In the Rule Information tab you can describe the rule. Please select Websites and Customer Groups for which this rule will be applied.

Please select 'Specific Coupon' in this field to create a coupon.

You can create Coupon Codes manually or use Auto Generation if you need multiple coupon codes.

1. The extension configuration settings

Uses per Coupon	<input type="text" value="1"/>
Uses per Customer	<input type="text" value="1"/>
From Date	<input type="text" value="08/26/2015"/>
To Date	<input type="text" value="08/31/2015"/>
Priority	<input type="text" value="1"/>
Public In RSS Feed	<input type="text" value="Yes"/>
Allow several coupons from the same rule	<input type="text" value="Yes"/>

NOTE: To specify unique coupon codes please go to System -> Configuration

Allow or restrict multiple coupons from one rule per individual rule.

Multiple Coupons	
Unique codes	<input type="text" value="111, 222, 5ABCD, BIG2"/> <small>▲ If some other codes from the list is applied, all other coupons will be removed</small>
Allowed Codes	<input type="text" value="HOT17, BLACKF"/> <small>▲ Coupons indicated in this field can be used with any other coupons.</small>
Allow several coupons from the same rule	<input type="text" value="No"/>
Maximum number of coupons for order	<input type="text" value="2"/> <small>▲ 0 - no limit</small>

Indicate coupons that can be applied together with other coupons.

Specify unique coupon codes which can not be used together with other codes.

Set the maximum number of coupons for order.

2. Multiple coupons in shopping cart

	Product Name	Unit Price	Qty	Subtotal
	BlackBerry 8100 Pearl	\$349.99	<input type="text" value="1"/>	\$349.99
	Ottoman	\$299.99	<input type="text" value="1"/>	\$299.99
	Barcelona Bamboo Platform Bed	\$2,299.00	<input type="text" value="1"/>	\$2,299.00

				Discount (test1,test2,test7,test8)	-\$1,188.05
				Grand Total	\$1,775.93

And also in customer account order view

Important. Please be aware of these aspects of the extension cooperation:

1. Combination of ‘Multiple Coupons’ and ‘Wildcard and Url Coupons’.

This will **only** occur if you use ‘Multiple Coupons’ and ‘Wildcard and Url Coupons’ extensions **together** on one magento installation.

1.1. Several coupons from the same rule can be used for one order. For example, you’ve created a shopping cart price rule with a number of coupon codes. If a customer knows several coupons codes of the same rule, he will be able to use all the coupon codes with one order (multiple coupons extension will let him/her do that).

Let’s say you have a shopping cart price rule that gives 10% discount and have 4 coupon codes for this rule: ‘code1’, ‘code2’, ‘code3’ and ‘code4’. If a customer knows coupons ‘code3’ and ‘code4’, he will be able to apply both these codes in the shopping cart, which will give her/him 20% of discount in total.

1.2. Discount calculation. For cases when multiple coupons are used for one order, discounts may be calculated differently, depending on whether the coupon codes belong to the same rule or to different rules.

Situation 1. Let’s say an order subtotal is **100**. The customer uses **3** coupon codes from **different** shopping cart rules in the cart. Each of the coupons gives **10%** discount. The total will be 72.9 ($100 - 10 - 9 - 8.1 = 72.9$), because each consecutive discount is calculated based on the discounted price of the order.

Situation 2. Again let’s say an order subtotal is **100**. The customer uses **3** coupon codes in the cart, but this time from the **same** shopping cart rule. Again each of the coupons gives **10%** discount. This time the total will be 70 ($100 - 10 - 10 - 10 = 70$), because in this case consecutive discounts are calculated off the base price of the order.

1.3 ‘Buy X get Y free’ action. You can create shopping cart price rules with ‘Buy X get Y free’ action, using standard magento functionality.

For example, you create a rule with ‘Buy X get Y free’ action, according to which if a customer buys 3 iphones, he/she gets one free. Then you import a number of coupon codes for the rule (using ‘Wildcard and Url Coupons’), e.g.: ‘code 1’, ‘code 2’, ‘code 3’, ‘code 4’, ‘code 5’.

Let’s say a customer somehow finds ‘code 2’ and ‘code 3’. Then she/he adds 3 iphones to the cart and applies both of the coupon codes – 2 of the three iphones will become free (if a customer applies three coupons codes – all three phones will become free).

We strongly recommend **not to use** multiple coupon codes for rules with ‘Buy X get Y free’ action or at least please distribute the codes very carefully.

Once again, please be aware that the above will **only** occur if you use combination of ‘Multiple Coupons’ and ‘Wildcard and Url Coupons’ extensions on one magento installation.

2. Combination of ‘Multiple Coupons’, ‘Wildcard and Url Coupons’ and ‘Special Promotions’.

This applies **only** if you use ‘Wildcard and Url Coupons’, ‘Special Promotions’ and ‘Multiple Coupons’ extensions **together** on one magento installation.

One of the ‘Special Promotions’ extension features is ‘Fixed Item Price’ action for shopping cart price rule functionality. With the help of this action you can discount products to a fixed price and create rules of the kind: ‘buy 10 products or more and get each product for 50’.

We strongly recommend **not to use** multiple coupon codes for rules with ‘Fixed Item Price’ action. At the very least please distribute the codes extremely carefully. Because 2 coupons from the same rule with ‘Fixed Item Price’ action will result in very big discounts in shopping cart.

Thank you!
